November 21, 2013

Dear Sir:

I am writing to respond to the letter I received about Intercontinental Potash Corp (USA) construction of a new SOP mine and processing plant in the Jal, NM area.

My concerns are the dust blowing off the tailing pile during times of strong winds. I reside within 1.5 miles of the proposed tailings pile. I am concerned about what is in the dust other than Gypsum. And how will the dust affect the area surrounding this tailings pile and processing plant. What effect will the dust have on humans and livestock?

Respectfully,

Mark McCloy
