CONVERSION FACTORS FOR SI UNITS	xxv

1 Errors and Variability of Observations

OSCAR KEMPTHORNE AND R. R. ALLMARAS

1-1 Introduction	1
1-2 Classificaton of Measurement Errors	2
1-3 Scientific Validity of Measurements	4
1-4 Characterization of Variability	4
1-5 The Estimation of Precision	15
1-6 Precision of Derived Observations	17
1-7 The Roles of Bias and Precision	22
1-8 How to Study Errors of Observation	25
1-9 Role of Errors of Observation in the Study of Relationships	26
1-10 A Note on Terminology	28
1-11 Statistical Problems and Techniques in General	29
1-12 References	30

2 Sampling

R. G. PETERSEN AND L. D. CALVIN

2-1 Introduction	33
2-2 Variation of Soils	33
2-3 Sampling Plans	35
2-4 Sources of Errors	44
2-5 Subsampling	45
2-6 Composite Samples	48
2-7 References	50

3 Geostatistical Methods Applied to Soil Science

A. W. WARRICK, D. E. MYERS, AND D. R. NIELSEN

3-1 Introduction	53
3-2 Quantification of Spatial Interdependence	54
3-3 Punctual Kriging	61
3-4 Block Kriging	70
3-5 Sampling Strategies for Specified Estimation Error	72
3-6 Further Application	74
3-7 Discussion	79
3-8 References	80

4 Extraneous Values

W. J. DIXON

4–1 Introduction 83
4–2 The Problem of Estimation (Use of the Median and Range) .. 84
4–3 Confidence Limits as Estimates 86
4–4 The Problem of Designating Extraneous Values 87
4–5 Recommended Rules for Designating Extraneous Values 88
4–6 Recommended Rules for Estimation in the Presence of Extraneous Values 89
4–7 Test of Hypotheses (Trimmed and Winsorized *t*-Tests) 89
4–8 References 90

5 Pretreatment for Mineralogical Analysis

G. W. KUNZE AND J. B. DIXON

5–1 General Introduction 91
5–2 Removal of Soluble Salts and Carbonates 92
5–3 Removal of Organic Matter 95
5–4 Removal of Free Iron Oxides 97
5–5 Particle-size Separations 99
5–6 References 99

6 Oxides, Hydroxides, and Aluminosilicates

MARION L. JACKSON, CHIN H. LIM, AND LUCIAN W. ZELAZNY

6–1 Introduction 101
6–2 Quartz and Feldspars 104
6–3 Noncrystalline Aluminosilicates and Hydrous Oxides by Acid Ammonium Oxalate in the Dark 113
6–4 Free Iron–Aluminum Oxides and Hydroxides 118
6–5 Poorly Crystalline Aluminosilicates 124
6–6 Smectite, Vermiculite, and CEC Hysteresis 131
6–7 Rutile and Anatase 138
6–8 References 142

7 Thermal Analysis Techniques

K. H. TAN, B. F. HAJEK, AND I. BARSHAD

7–1 Introduction 151
7–2 Principles of Reactions and Analysis 152
7–3 Methods 157
7–4 References 181

8 Petrographic Microscope Techniques

JOHN G. CADY, L. P. WILDING, AND L. R. DREES

8–1 General Introduction 185
8–2 Grains 186
8–3 Thin Sections 198

9 Magnetic Methods

M. B. MC BRIDE

9–1 Introduction 219
9–2 Magnetic Susceptibility 220
9–3 Electron Spin Resonance (ESR) 234
9–4 Nuclear Magnetic Resonance (NMR) 252
9–5 References 268

10 Electron Microprobe Analysis

B. L. SAWHNEY

10–1 Introduction 271
10–2 Principles 271
10–3 Instrument 272
10–4 Specimen Preparation 278
10–5 Quantitative Analysis 280
10–6 Monte Carlo Method 283
10–7 Applications in Soil Analysis 283
10–8 Reference Books 290
10–9 References 290

11 Infrared Spectrometry

JOE L. WHITE AND CHARLES B. ROTH

11–1 General Introduction 291
11–2 Principles 293
11–3 Sample Preparation 302
11–4 Functional-group and Qualitative Analysis of Organic Compounds 313
11–5 Identification and Characterization of Amorphous and Crystalline Inorganic or Mineral Phases 315
11–6 Quantitative Analysis 321
11–7 Spectral Data Collection and Manipulation 325
11–8 References 326

12 X-Ray Diffraction Techniques

L. D. WHITTIG AND W. R. ALLARDICE

12–1 General Introduction 331
12–2 Principles of X-ray Diffraction 331
12–3 Preparation of Samples 336
12–4 X-ray Examination of Samples 349
12–5 Criteria For Differentiation of Phyllosilicate Species 351
12–6 Qualitative Interpretation of Diffraction Patterns 354
12–7 Quantitative Interpretation of Diffraction Patterns 356
12–8 References 359

13 Bulk Density

G. R. BLAKE AND K. H. HARTGE

13–1 General Introduction 363
13–2 Core Method 364
13–3 Excavation Method 367
13–4 Clod Method 371
13–5 Radiation Methods 373
13–6 References 375

14 Particle Density

G. R. BLAKE AND K. H. HARTGE

14–1 Introduction 377
14–2 Principles 377
14–3 Pycnometer Method 378
14–4 Submersion Method 379
14–5 Comments 380
14–6 References 381

15 Particle-size Analysis

G. W. GEE AND J. W. BAUDER

15–1 Introduction 383
15–2 Principles 385
15–3 Sample Preparation 398
15–4 Pipet Method 399
15–5 Hydrometer Method 404
15–6 Other Methods 408
15–7 References 409

16 Specific Surface

D. L. CARTER, M. M. MORTLAND, AND W. D. KEMPER

16–1 Introduction 413
16–2 Principles 414
16–3 Method 419
16–4 References 422

17 Aggregate Stability and Size Distribution

Chapter 6 Light Microscopic Methods for Studying Soil Microorganisms 81

PETER J. BOTTOMLEY

6–1 Sampling of Soil for Microscopic Observation 81
6–2 Microscopic Enumeration of Total Bacteria in Soil 82
6–3 Determining the Proportion of Viable Soil Bacteria Using a Cell Elongation Assay 92
6–4 Determining the Proportion of Viable Soil Bacteria by Following the Reduction of Tetrazolium Dyes to Formazan 94
6–5 Microscopic Determination of the Mycelial Length of Soil Fungi 96
6–6 Determining the Proportion of Metabolically Active Fungal Mycelia by Following the Hydrolysis of Fluorescein Diacetate 98
6–7 Determining the Proportion of Metabolically Active Fungal Mycelia by Following the Reduction of Tetrazolium Dyes to Formazan 99
6–8 Determining the Weight of Soil Biomass from Microscopic Estimates of Biovolume 100
6–9 Microscopic Enumeration of Bacteria with Fluorescently Labeled Oligonucleotides Directed at Specific Regions of 16S Ribosomal RNA 101
