

Raytheon

November 2011

Raytheon Missile System's Diné facility is located in the Navajo Agricultural Product Industry (NAPI) Park on Navajo Nation Trust Land in Farmington. Our 255 employees, 85 percent of whom are Native Americans, are highly skilled with diversified technical knowledge, performing bench-type assembly work on electromechanical systems. Their facility is a 68,500 square foot manufacturing site leased from the Navajo Nation.

RMS - Diné employees have made significant environmental improvements and are committed to continuous achievements through pollution prevention practices. Thanks to a robust Environmental, Health and Safety program, RMS – Diné employees not only meet regulatory compliance standards, they set the pace in the Four Corners region for EHS excellence. We are governed by a site-specific Environmental Management System that has been in place since 2008. We have successfully completed both an EMS and regulatory audits conducted a third party auditor annually.

We operate our facility and engineer our processes, products and services to maximize efficiency and reduce environmental, health and safety risk and impact. RMS-Diné strives to design environmental and safety principles into our process and products and has established measures to monitor our sustainability performance. As part of our commitment to the region, we support volunteerism and provide opportunities for employee involvement both at work and in the local community.

Raytheon is a technology and innovation leader specializing in defense, homeland security and other government markets throughout the world. With a history of innovation spanning 89 years, Raytheon provides state-of-the-art electronics, mission systems integration and other capabilities in the areas of sensing; effects; and command, control, communications and intelligence systems, as well as a broad range of mission support services. With headquarters in Waltham, Mass., Raytheon employs 72,000 people worldwide.
