ZIA HILLS CENTRAL FACILITY

LEA COUNTY, NEW MEXICO

NEW SOURCE REVIEW PERMIT APPLICATION

PREPARED FOR:

VIVIAN BERMUDEZ

SENIOR ENVIRONMENTAL COORDINATOR

JANUARY 2021

ZIA HILLS CENTRAL FACILITY

NEW SOURCE REVIEW PERMIT APPLICATION

Table of Contents

Section 1
Facility Information

Mail Application To:		**For Department use only:**
New Mexico Environment Department Air Quality Bureau Permits Section 525 Camino de los Marquez, Suite 1 Santa Fe, New Mexico, 87505 Phone: (505) 476-4300 Fax: (505) 476-4375 www.env.nm.gov/aqb		AIRS No.:

Universal Air Quality Permit Application

Use this application for NOI, NSR, or Title V sources.

Use this application for: the initial application, modifications, technical revisions, and renewals. For technical revisions, complete Sections, 1-A, 1-B, 2-E, 3, 9 and any other sections that are relevant to the requested action; coordination with the Air Quality Bureau permit staff prior to submittal is encouraged to clarify submittal requirements and to determine if more or less than these sections of the application are needed. Use this application for streamline permits as well. See Section 1-I for submittal instructions for other permits.

This application is submitted as (check all that apply)**:** ☐ Request for a No Permit Required Determination (no fee)
☐ **Updating** an application currently under NMED review. Include this page and all pages that are being updated (no fee required).
Construction Status: ☐ Not Constructed ☑ Existing Permitted (or NOI) Facility ☐ Existing Non-permitted (or NOI) Facility
Minor Source: ☐ a NOI 20.2.73 NMAC ☑ 20.2.72 NMAC application or revision ☐ 20.2.72.300 NMAC Streamline application
Title V Source: ☐ Title V (new) ☐ Title V renewal ☐ TV minor mod. ☐ TV significant mod. TV Acid Rain: ☐ New ☐ Renewal
PSD Major Source: ☐ PSD major source (new) ☐ minor modification to a PSD source ☐ a PSD major modification

Acknowledgements:

☑ I acknowledge that a pre-application meeting is available to me upon request. ☐ Title V Operating, Title IV Acid Rain, and NPR applications have no fees.

☑ $500 NSR application Filing Fee enclosed OR ☐ The full permit fee associated with 10 fee points (required w/ streamline applications).

☑ Check No.: 1339 in the amount of $500

☑ I acknowledge the required submittal format for the hard copy application is printed double sided 'head-to-toe', 2-hole punched (except the Sect. 2 landscape tables is printed 'head-to-head'), numbered tab separators. Incl. a copy of the check on a separate page.

☐ This facility qualifies to receive assistance from the Small Business Environmental Assistance program (SBEAP) and qualifies for 50% of the normal application and permit fees. Enclosed is a check for 50% of the normal application fee which will be verified with the Small Business Certification Form for your company.

☐ This facility qualifies to receive assistance from the Small Business Environmental Assistance Program (SBEAP) but does not qualify for 50% of the normal application and permit fees. To see if you qualify for SBEAP assistance and for the small business certification form go to https://www.env.nm.gov/aqb/sbap/small_business_criteria.html).

Citation: Please provide the **low level citation** under which this application is being submitted: **20.2.72.202.D.1 NMAC**
(e.g. application for a new minor source would be 20.2.72.200.A NMAC, one example for a Technical Permit Revision is 20.2.72.219.B.1.b NMAC, a Title V acid rain application would be: 20.2.70.200.C NMAC)

Section 1 – Facility Information

Section 1-A: Company Information

		AI # if known (see 1st 3 to 5 #s of permit IDEA ID No.):	Updating Permit/NOI #: 7746
1	Facility Name: Zia Hills Central Facility	Plant primary SIC Code (4 digits): 1311	
		Plant NAIC code (6 digits): 211120	
a	Facility Street Address (If no facility street address, provide directions from a prominent landmark): See 1-D.4		
2	Plant Operator Company Name: ConocoPhillips Company	Phone/Fax: (832) 486-2000	
a	Plant Operator Address: 935 N. Eldridge Parkway; Houston, TX 77079		
b	Plant Operator's New Mexico Corporate ID or Tax ID: 73-0400345		

3	Plant Owner(s) name(s): ConocoPhillips Company	Phone/Fax: (832) 486-2000
a	Plant Owner(s) Mailing Address(s): 935 N. Eldridge Parkway; Houston, TX 77079	
4	Bill To (Company): ConocoPhillips Company	Phone/Fax: (832) 486-2000
a	Mailing Address: 935 N. Eldridge Parkway; SP2-12-W304; Houston, TX 77079	E-mail: vivian.c.bermudez@conocophillips.com
5	☐ Preparer: ☑ Consultant: Evan Tullos - PEI	Phone/Fax: (865) 850-2007
a	Mailing Address: 5 Cardinal Court; Edwardsville, IL 62025	E-mail: etullos@pei-tx.com
6	Plant Operator Contact: Vivian Bermudez	Phone/Fax: (832) 486-2496
a	Mailing Address: 935 N. Eldridge Parkway; SP2-12-W304; Houston, TX 77079	E-mail: vivian.c.bermudez@conocophillips.com
7	Air Permit Contact[1]: Vivian Bermudez	Title: Sr. Environmental Coordinator
a	E-mail: vivian.c.bermudez@conocophillips.com	Phone/Fax: (832) 486-2496
b	Mailing Address: 935 N. Eldridge Parkway; SP2-12-W304; Houston, TX 77079	
c	The designated Air permit Contact will receive all official correspondence (i.e. letters, permits) from the Air Quality Bureau.	

Section 1-B: Current Facility Status

1.a	Has this facility already been constructed? ☑ Yes ☐ No	1.b If yes to question 1.a, is it currently operating in New Mexico? ☑ Yes ☐ No
2	If yes to question 1.a, was the existing facility subject to a Notice of Intent (NOI) (20.2.73 NMAC) before submittal of this application? ☐ Yes ☑ No	If yes to question 1.a, was the existing facility subject to a construction permit (20.2.72 NMAC) before submittal of this application? ☑ Yes ☐ No
3	Is the facility currently shut down? ☐ Yes ☑ No	If yes, give month and year of shut down (MM/YY):
4	Was this facility constructed before 8/31/1972 and continuously operated since 1972? ☐ Yes ☑ No	
5	If Yes to question 3, has this facility been modified (see 20.2.72.7.P NMAC) or the capacity increased since 8/31/1972? ☐Yes ☐No ☐N/A	
6	Does this facility have a Title V operating permit (20.2.70 NMAC)? ☐ Yes ☑ No	If yes, the permit No. is: P-
7	Has this facility been issued a No Permit Required (NPR)? ☐ Yes ☑ No	If yes, the NPR No. is:
8	Has this facility been issued a Notice of Intent (NOI)? ☐ Yes ☑ No	If yes, the NOI No. is:
9	Does this facility have a construction permit (20.2.72/20.2.74 NMAC)? ☐ Yes ☑ No	If yes, the permit No. is:
10	Is this facility registered under a General permit (GCP-1, GCP-2, etc.)? ☑ Yes ☐ No	If yes, the register No. is: GCP-O&G-7746

Section 1-C: Facility Input Capacity & Production Rate

1	What is the facility's maximum input capacity, specify units (reference here and list capacities in Section 20, if more room is required)			
a	Current	Hourly: 563 BBL/3.3 MMSCF	Daily: 13500 BBL /80 MMSCF	Annually: 4.93 MMBBL/29.2 BSCF
b	Proposed	Hourly: 771 BBL/5 MMSCF	Daily: 18503 BBL /120 MMSCF	Annually: 6.57 MMBBL/43.8 BSCF
2	What is the facility's maximum production rate, specify units (reference here and list capacities in Section 20, if more room is required)			
a	Current	Hourly: 563 BBL/3.3 MMSCF	Daily: 13500 BBL /80 MMSCF	Annually: 4.93 MMBBL/29.2 BSCF
b	Proposed	Hourly: 771 BBL/5 MMSCF	Daily: 18503 BBL /120 MMSCF	Annually: 6.57 MMBBL/43.8 BSCF

Section 1-D: Facility Location Information

1	Section: 19	Range: 32E	Township: 26S	County: Lea	Elevation (ft): 3173
2	UTM Zone: ☐ 12 or ☑ 13			Datum: ☐ NAD 27 ☐ NAD 83 ☑ WGS 84	
a	UTM E (in meters, to nearest 10 meters): 621600			UTM N (in meters, to nearest 10 meters): 3543600	
b	**AND** Latitude (deg., min., sec.): 32º 01' 19"			Longitude (deg., min., sec.): -103º 42' 45"	
3	Name and zip code of nearest New Mexico town: Malaga - 88263				
4	Detailed Driving Instructions from nearest NM town (attach a road map if necessary): From Malaga, drive S on Hwy 285 for 30.3 mi. to L on RM 652E (Farm to Mkt.). Drive 17 mi. to continue onto J-1/Orla Rd. Drive 2.0 mi. to L on Battle Axe Rd. Drive 0.8 mi. to L into site area.				
5	The facility is 24.9 (distance) miles SE (direction) of Malaga (nearest town).				
6	Status of land at facility (check one): ☐ Private ☐ Indian/Pueblo ☑ Federal BLM ☐ Federal Forest Service ☐ Other (specify)				
7	List all municipalities, Indian tribes, and counties within a ten (10) mile radius (20.2.72.203.B.2 NMAC) of the property on which the facility is proposed to be constructed or operated: Eddy, Lea				
8	**20.2.72** NMAC applications **only**: Will the property on which the facility is proposed to be constructed or operated be closer than 50 km (31 miles) to other states, Bernalillo County, or a Class I area (see www.env.nm.gov/aqb/modeling/class1areas.html)? ☑ Yes ☐ No (20.2.72.206.A.7 NMAC) If yes, list all with corresponding distances in kilometers: TX - 2.4				
9	Name nearest Class I area: Carlsbad Caverns				
10	Shortest distance (in km) from facility boundary to the boundary of the nearest Class I area (to the nearest 10 meters): 64.61				
11	Distance (meters) from the perimeter of the Area of Operations (AO is defined as the plant site inclusive of all disturbed lands, including mining overburden removal areas) to nearest residence, school or occupied structure: > 5				
12	Method(s) used to delineate the Restricted Area: Fence "**Restricted Area**" is an area to which public entry is effectively precluded. Effective barriers include continuous fencing, continuous walls, or other continuous barriers approved by the Department, such as rugged physical terrain with steep grade that would require special equipment to traverse. If a large property is completely enclosed by fencing, a restricted area within the property may be identified with signage only. Public roads cannot be part of a Restricted Area.				
13	Does the owner/operator intend to operate this source as a portable stationary source as defined in 20.2.72.7.X NMAC? ☐ Yes ☑ No A portable stationary source is not a mobile source, such as an automobile, but a source that can be installed permanently at one location or that can be re-installed at various locations, such as a hot mix asphalt plant that is moved to different job sites.				
14	Will this facility operate in conjunction with other air regulated parties on the same property? ☒ No ☐ Yes If yes, what is the name and permit number (if known) of the other facility?				

Section 1-E: Proposed Operating Schedule (The 1-E.1 & 1-E.2 operating schedules may become conditions in the permit.)

1	Facility **maximum** operating ($\frac{\text{hours}}{\text{day}}$): 24	($\frac{\text{days}}{\text{week}}$): 7	($\frac{\text{weeks}}{\text{year}}$): 52	($\frac{\text{hours}}{\text{year}}$): 8760		
2	Facility's maximum daily operating schedule (if less than 24 $\frac{\text{hours}}{\text{day}}$)? Start:	☐AM ☐PM	End:	☐AM ☐PM		
3	Month and year of anticipated start of construction: Upon receipt of permit					
4	Month and year of anticipated construction completion: July 2020					
5	Month and year of anticipated startup of new or modified facility: July 2020					
6	Will this facility operate at this site for more than one year? ☑ Yes ☐ No					

Section 1-F: Other Facility Information

1	Are there any current Notice of Violations (NOV), compliance orders, or any other compliance or enforcement issues related to this facility? ☐ Yes ☑ No If yes, specify:

a	If yes, NOV date or description of issue:		NOV Tracking No:
b	Is this application in response to any issue listed in 1-F, 1 or 1a above? ☐ Yes ☑ No If Yes, provide the 1c & 1d info below:		
c	Document Title:	Date:	Requirement # (or page # and paragraph #):
d	Provide the required text to be inserted in this permit:		
2	Is air quality dispersion modeling or modeling waiver being submitted with this application? ☑ Yes ☐ No		
3	Does this facility require an "Air Toxics" permit under 20.2.72.400 NMAC & 20.2.72.502, Tables A and/or B? ☐ Yes ☑ No		
4	Will this facility be a source of federal Hazardous Air Pollutants (HAP)? ☑ Yes ☐ No		
a	If Yes, what type of source? ☐ **Major** (☐ ≥10 tpy of any single HAP **OR** ☐ ≥25 tpy of any combination of HAPS) **OR** ☑ **Minor** (☑ <10 tpy of any single HAP **AND** ☑ <25 tpy of any combination of HAPS)		
5	Is any unit exempt under 20.2.72.202.B.3 NMAC? ☐ Yes ☑ No		
a	If yes, include the name of company providing commercial electric power to the facility: _____ Commercial power is purchased from a commercial utility company, which specifically does not include power generated on site for the sole purpose of the user.		

Section 1-G: Streamline Application

(This section applies to 20.2.72.300 NMAC Streamline applications only)

1	☐ I have filled out Section 18, "Addendum for Streamline Applications." ☑ N/A (This is not a Streamline application.)

Section 1-H: Current Title V Information - Required for all applications from TV Sources

(Title V-source required information for all applications submitted pursuant to 20.2.72 NMAC (Minor Construction Permits), or 20.2.74/20.2.79 NMAC (Major PSD/NNSR applications), and/or 20.2.70 NMAC (Title V))

1	Responsible Official (R.O.) (20.2.70.300.D.2 NMAC):	Phone:
a	R.O. Title:	R.O. e-mail:
b	R. O. Address:	
2	Alternate Responsible Official (20.2.70.300.D.2 NMAC):	Phone:
a	A. R.O. Title:	A. R.O. e-mail:
b	A. R. O. Address:	
3	Company's Corporate or Partnership Relationship to any other Air Quality Permittee (List the names of any companies that have operating (20.2.70 NMAC) permits and with whom the applicant for this permit has a corporate or partnership relationship):	
4	Name of Parent Company ("Parent Company" means the primary name of the organization that owns the company to be permitted wholly or in part.):	
a	Address of Parent Company:	
5	Names of Subsidiary Companies ("Subsidiary Companies" means organizations, branches, divisions or subsidiaries, which are owned, wholly or in part, by the company to be permitted.):	
6	Telephone numbers & names of the owners' agents and site contacts familiar with plant operations:	
7	Affected Programs to include Other States, local air pollution control programs (i.e. Bernalillo) and Indian tribes: Will the property on which the facility is proposed to be constructed or operated be closer than 80 km (50 miles) from other states, local pollution control programs, and Indian tribes and pueblos (20.2.70.402.A.2 and 20.2.70.7.B)? If yes, state which ones and provide the distances in kilometers:	

Section 1-I – Submittal Requirements

Each 20.2.73 NMAC (**NOI**), a 20.2.70 NMAC (**Title V**), a 20.2.72 NMAC (**NSR** minor source), or 20.2.74 NMAC (**PSD**) application package shall consist of the following:

Hard Copy Submittal Requirements:

1) One hard copy **original signed and notarized application package** **printed double sided** **'head-to-toe'** **2-hole punched** as we bind the document on top, not on the side; except Section 2 (landscape tables), which should be head-to-head. Please use **numbered tab separators** in the hard copy submittal(s) as this facilitates the review process. For NOI submittals only, hard copies of UA1, Tables 2A, 2D & 2F, Section 3 and the signed Certification Page are required. Please include a copy of the check on a separate page.

2) If the application is for a minor NSR, PSD, NNSR, or Title V application, include one working hard **copy** for Department use. This copy should be printed in book form, 3-hole punched, and **must be double sided**. Note that this is in addition to the head-to-to 2-hole punched copy required in 1) above. Minor NSR Technical Permit revisions (20.2.72.219.B NMAC) only need to fill out Sections 1-A, 1-B, 3, and should fill out those portions of other Section(s) relevant to the technical permit revision. TV Minor Modifications need only fill out Sections 1-A, 1-B, 1-H, 3, and those portions of other Section(s) relevant to the minor modification. NMED may require additional portions of the application to be submitted, as needed.

3) The entire NOI or Permit application package, including the full modeling study, should be submitted electronically. Electronic files for applications for NOIs, any type of General Construction Permit (GCP), or technical revisions to NSRs must be submitted with compact disk (CD) or digital versatile disc (DVD). For these permit application submittals, two CD copies are required (in sleeves, not crystal cases, please), with additional CD copies as specified below. NOI applications require only a single CD submittal. Electronic files for other New Source Review (construction) permits/permit modifications or Title V permits/permit modifications can be submitted on CD/DVD or sent through AQB's secure file transfer service.

Electronic files sent by (check one):

☐ CD/DVD attached to paper application

☑ secure electronic transfer. Air Permit Contact Name Evan Tullos - PEI

Email etullos@pei-tx.com

Phone number (865) 850-2007

a. If the file transfer service is chosen by the applicant, after receipt of the application, the Bureau will email the applicant with instructions for submitting the electronic files through a secure file transfer service. Submission of the electronic files through the file transfer service needs to be completed within 3 business days after the invitation is received, so the applicant should ensure that the files are ready when sending the hard copy of the application. The applicant will not need a password to complete the transfer. **Do not use the file transfer service for NOIs, any type of GCP, or technical revisions to NSR permits.**

4) Optionally, the applicant may submit the files with the application on compact disk (CD) or digital versatile disc (DVD) following the instructions above and the instructions in 5 for applications subject to PSD review.

5) If **air dispersion modeling** is required by the application type, include the **NMED Modeling Waiver** and/or electronic air dispersion modeling report, input, and output files. The dispersion modeling ***summary report only*** should be submitted as hard copy(ies) unless otherwise indicated by the Bureau.

6) If the applicant submits the electronic files on CD and the application is subject to PSD review under 20.2.74 NMAC (PSD) or NNSR under 20.2.79 NMC include,
   a. one additional CD copy for US EPA,
   b. one additional CD copy for each federal land manager affected (NPS, USFS, FWS, USDI) and,
   c. one additional CD copy for each affected regulatory agency other than the Air Quality Bureau.

   If the application is submitted electronically through the secure file transfer service, these extra CDs do not need to be submitted.

Electronic Submittal Requirements [in addition to the required hard copy(ies)]:

1) All required electronic documents shall be submitted as 2 separate CDs or submitted through the AQB secure file transfer service. Submit a single PDF document of the entire application as submitted and the individual documents comprising the application.

2) The documents should also be submitted in Microsoft Office compatible file format (Word, Excel, etc.) allowing us to access the text and formulas in the documents (copy & paste). Any documents that cannot be submitted in a Microsoft Office compatible format shall be saved as a PDF file from within the electronic document that created the file. If you are unable to provide

Microsoft office compatible electronic files or internally generated PDF files of files (items that were not created electronically: i.e. brochures, maps, graphics, etc,), submit these items in hard copy format. We must be able to review the formulas and inputs that calculated the emissions.

3) It is preferred that this application form be submitted as 4 electronic files (3 MSWord docs: Universal Application section 1 [UA1], Universal Application section 3-19 [UA3], and Universal Application 4, the modeling report [UA4]) and 1 Excel file of the tables (Universal Application section 2 [UA2]). Please include as many of the 3-19 Sections as practical in a single MS Word electronic document. Create separate electronic file(s) if a single file becomes too large or if portions must be saved in a file format other than MS Word.

4) The electronic file names shall be a maximum of 25 characters long (including spaces, if any). The format of the electronic Universal Application shall be in the format: "A-3423-FacilityName". The "A" distinguishes the file as an application submittal, as opposed to other documents the Department itself puts into the database. Thus, all electronic application submittals should begin with "A-". Modifications to existing facilities should use the core permit number (i.e. '3423') the Department assigned to the facility as the next 4 digits. Use 'XXXX' for new facility applications. The format of any separate electronic submittals (additional submittals such as non-Word attachments, re-submittals, application updates) and Section document shall be in the format: "A-3423-9-description", where "9" stands for the section # (in this case Section 9-Public Notice). Please refrain, as much as possible, from submitting any scanned documents as this file format is extremely large, which uses up too much storage capacity in our database. Please take the time to fill out the header information throughout all submittals as this will identify any loose pages, including the Application Date (date submitted) & Revision number (0 for original, 1, 2, etc.; which will help keep track of subsequent partial update(s) to the original submittal. Do not use special symbols (#, @, etc.) in file names. The footer information should not be modified by the applicant.

Table of Contents

Section 2
Application Tables

Table 2-A: Regulated Emission Sources

Unit and stack numbering must correspond throughout the application package. Equipment that qualifies for an exemption under 20.2.72.202.B NMAC should be included in Table 2-B **Note:** Equipment options **are not authorized.**

Unit Number[1]	Source Description	Manufacturer/Make /Model	Serial #	Manufacturer's Rated Capacity[3] (Specify Units)	Requested Permitted Capacity[3] (Specify Units)	Date of Manufacture[2] / Date of Construction/ Reconstruction[2]	Controlled by Unit # / Emissions vented to Stack #	Source Classification Code (SCC)	RICE Ignition Type (CI, SI, 4SLB, 2SLB)[4]	For Each Piece of Equipment, Check Onc

[1] Unit numbers must correspond to unit numbers in the previous permit unless a complete cross reference table of all units in both permits is provided.

[2] Specify dates required to determine regulatory applicability.

[3] To properly account for power conversion efficiencies, generator set rated capacity shall be reported as the rated capacity of the engine in horsepower, not the kilowatt capacity of the generator set.

[4] "4SLB" means four stroke lean burn engine, "4SRB" means four stroke rich burn engine, "2SLB" means two stroke lean burn engine, "CI" means compression ignition, and "SI" means spark ignition

Table 2-B: Exempted Equipment (20.2.72 NMAC)

All 20.2.72 NMAC applications must list Exempted Equipment in this table. If equipment listed on this table is exempt under 20.2.72.202.B.5, include emissions calculations and emissions totals for 202.B.5 "similar functions" units, operations, and activities in Section 5, Calculations. Unit & stack numbering must be consistent throughout the application package.

Unit Number	Source Description	Manufacturer	Model No. / Serial No.	Max Capacity / Capacity Units	List Specific 20.2.72.202 NMAC Exemption (e.g. 20.2.72.202.B.5)	Date of Manufacture /Reconstruction[1] / Date of Installation /Construction[1]	For Each Piece of Equipment, Check Onc

[1] List each control device on a separate line. For each control device, list all emission units controlled by the control device.

Table 2-D: Maximum Emissions (Consider federally enforceable controls under normal operating conditions)

This table must be filled out

Maximum Federally Enforceable Emissions are the emissions at maximum capacity with only federally enforceable methods of reducing emissions. Calculate the hourly emissions using the worst case hourly emissions for each pollutant. For each pollutant, calculate the annual emissions as if the facility were operating at maximum facility capacity without pollution controls for 8760 hours per year. Account for federally enforcable controls, suc as an NSPS or MACT regulation. Consider federally enforceable controls due to permitting. List Hazardous Air Pollutants (HAP) in Table 2-I. Unit & stack numbering must be consistent throughout the application package. Fill all cells in this table with the emission numbers or a "-" symbol. A "-" symbol indicates that emissions of this pollutant are not expected. Numbers shall be expressed to at least 2 decimal points (e.g. 0.41, 1.41, or 1.41E-4).

[1] **Condensable Particulate Matter:** Include condensable particulate matter emissions for PM10 and PM2.5 if the source is a combustion source.

Table 2-E: Requested Allowable Emissions

Enter an allowable emission limit for each piece of equipment with either an uncontrolled emission rate greater than 1 lb/hr or 1 ton per year (tpy) or a controlled emission rate of any amount. For H2S please represent all emissions even if they are less than 1 lb/hr and 1 tpy. If selecting combustion SSM emissions, enter lb/hr and tpy values. If selecting up to 10 tpy of Malfunction VOC emissions, ente tpy values. Combustion emissions from malfunction events are**not authorized** under this permit. Fill all cells in this table with the emissions in lb/hr and tpy, or a "-" symbol. A "-" symbol indicates that emissions of this pollutant are not expected. Total the emissions from all equipment in the Totals row. Add additional rows as necessary. Unit & stack numbering must be consistent throughout the application package. Numbers shall be expressed to at least 2 decimal points (e.g. 0.41, 1.41, or 1.41E[4]).

[1] **Condensable Particulate Matter:** Include condensable particulate matter emissions for PM10 and PM2.5 if the source is a combustion source.

Table 2-F: Additional Emissions during Startup, Shutdown, and Routine Maintenance (SSM)

☐ This table is intentionally left blank since all emissions at this facility due to routine or predictable startup, shutdown, or scehduled maintenance are no higher than those listed in Table 2-E and a malfunction emission limit is not already permitted or requested. If you are required to report GHG emissions as described in Section 6a, include any GHG emissions during Startup, Shutdown, and/or Scheduled Maintenance (SSM) in Table 2-P. Provide an explanations of SSM emissions in Section 6 and 6a.

All applications for facilities that have emissions during routine our predictable startup, shutdown or scheduled maintenance (SSM)[1], including NOI applications, must include in this table the Maximum Emissions during routine or predictable startup, shutdown and scheduled maintenance (20.2.7 NMAC, 20.2.72.203.A.3 NMAC, 20.2.73.200.D.2 NMAC). In Section 6 and 6a, provide emissions calculations for all SSM emissions reported in this table. Refer to "Guidance for Submittal of Startup, Shutdown, Maintenance Emissions in Permit Applications (https://www.env.nm.gov/aqb/permit/aqb_pol.html) for more detailed instructions. Numbers shall be expressed to at least 2 decimal points (e.g. 0.41, 1.41, or 1.41E-4).

Unit No.	NOx		CO		VOC		SOx		PM[2]		PM10[2]		PM2.5[2]		H_2S		Lead	
	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr
SSM	0.29	0.02	0.58	0.04	330.73	10.19	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00	-	-	-	-
FL1	199.18	6.20	397.63	12.37	309.29	9.62	0.00	0.00	8.55	0.27	8.55	0.27	8.55	0.27	-	-	-	-

Totals	213.60	7.70	426.42	15.37	707.34	26.92	0.00	0.00	8.91	0.30	8.91	0.30	8.91	0.30	-	-	-	-

[1] **For instance**, if the short term steady-state Table 2-E emissions are 5 lb/hr and the SSM rate is 12 lb/hr, enter 7 lb/hr in this table. If the annual steady-state Table 2-E emissions are 21.9 TPY, and the number of scheduled SSM events result in annual emissions of 31.9 TPY, enter 10.0 TPY in the table below.

Table 2-G: Stack Exit and Fugitive Emission Rates for Special Stacks

☑ I have elected to leave this table blank because this facility does not have any stacks/vents that split emissions from a single source or combine emissions from more than one source listed in table 2-A. Additionally, the emission rates of all stacks match the Requested allowable emission rates stated in Table 2-E.

Use this table to list stack emissions (requested allowable) from split and combined stacks. List Toxic Air Pollutants (TAPs) and Hazardous Air Pollutants (HAPs) in Table 2-I. List all fugitives that are associated with the normal, routine, and non-emergency operation of the facility. Unit and stack numbering must correspond throughout the application package. Refer to Table 2-E for instructions on use of the "-" symbol and on significant figures.

Stack No.	Serving Unit Number(s) from Table 2-A	NOx		CO		VOC		SOx		PM		PM10		PM2.5		□ H_2S or □ Lead	
		lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr

Table 2-H: Stack Exit Conditions

Unit and stack numbering must correspond throughout the application package. Include the stack exit conditions for each unit that emits from a stack, including blowdown venting parameters and tank emissions.

Stack Type (Engine, Turbine, Flare, ECD, or Thermal Oxidizer Etc.)	Serving Unit Number(s) from Table 2-A	Orientation (H-Horizontal V=Vertical)	Height Above Ground (ft)	Temp. (F)	Flow Rate (acfs)	Velocity (ft/sec)	Inside Diameter (ft)
Engine	ENG1	Vertical	25.0	824	134	95.9	1.3

Table 2-I: Emission Rates for HAPs

HAP In the table below, report the potential emission rate for each HAP from each regulated emission unit listed in Table 1, only if the entire facility emits the HAP. For each such emission unit, HAP shall be reported to the nearest 0.1 tpy. Each facility-wide Individual HAP total and the facility-wide Total HAP shall be the sum of all HAP sources calculated to the nearest 0.1 ton per year. Use the HAP nomenclature as it appears in Section 112 (b) of the 1990 CAAA. Include tank-flashing emissions estimates of HAP in this table. For each HAP listed, fill all cells in this table with the emission numbers or a "-" symbol. A "-" symbol indicates that emissions of this pollutant are not expected, or the pollutant is emitted in a quantity less than the threshold amounts described above. Add additional rows as necessary.

Stack No.	Unit No.(s)	Total HAPs		Formaldehyde ☑ HAP		Acetaldehyde ☑ HAP		Acrolein ☑ HAP		Provide Pollutant Name Here ☐ HAP		Provide Pollutant Name Here ☐ HAP		Provide Pollutant Name Here ☐ HAP		Provide Pollutant Name Here ☐ HAP		Provide Pollutant Name Here ☐ HAP

Table 2-K: Liquid Data for Tanks Listed in Table 2-L

For each tank, list the liquid(s) to be stored in each tank. If it is expected that a tank may store a variety of hydrocarbon liquids, enter "mixed hydrocarbons" in the Composition column for that tank and enter the corresponding data of the most volatile liquid to be stored in the tank. If tank is to be used for storage of different materials, list all the materials in the "All Calculations" attachment, run the newest version of TANKS on each, and use the material with the highest emission rate to determine maximum uncontrolled and requested allowable emissions rate. The permit will specify the most volatile category of liquids that may be stored in each tank. Include appropriate tank-flashing modeling input data. Use additional sheets if necessary. Unit and stack numbering must correspond throughout the application package.

Tank No.	SCC Code	Material Name	Composition	Liquid Density (lb/gal)	Vapor Molecular Weight (lb/lb*mol)	Average Storage Conditions		Max Storage Conditions	
						Temperature (°F)	True Vapor Pressure (psia)	Temperature (°F)	True Vapor Pressure (psia)
		Not applicable							

Table 2-L: Tank Data

Include appropriate tank-flashing modeling input data. Unit and stack numbering must correspond throughout the application package.

Tank No.	Date Installed	Materials Stored	Roof Type	Seal Type	Capacity (bbl)	Diameter (M)	Vapor Space (M)	Color		Separator Pressure (psia)	Annual Throughput (gal/yr)	Turn-overs (per year)

Table 2-N: CEM Equipment

Enter Continuous Emissions Measurement (CEM) Data in this table. If CEM data will be used as part of a federally enforceable permit condition, or used to satisfy the requirements of a state or federal regulation, include a copy of the CEM's manufacturer specification sheet in the Information Used to Determine Emissions attachment. Unit and stack numbering must correspond throughout the application package. Use additional sheets if necessary.

Table 2-P: Greenhouse Gas Emissions

Applications submitted under 20.2.70, 20.2.72, & 20.2.74 NMAC are required to complete this Table. Power plants, Title V major sources, and PSD major sources must report and calculate all GHG emissions for each unit. Applicants must report potential emission rates in short tons per year (see Section 6.a for assistance). Include GHG emissions during Startup, Shutdown, and Scheduled Maintenance in this table. For minor source facilities that are not power plants, are not Title V, or are not PSD, there are three options for reporting GHGs 1) report GHGs for each individual piece of equipment; 2) report all GHGs from a group of unit types, for example report all combustion source GHGs as a single unit and all venting GHG as a second separate unit; OR 3) check the following box ☑ By checking this box, the applicant acknowledges the total CO2e emissions are less than 75,000 tons per year.

		CO_2 ton/yr	N_2O ton/yr	CH_4 ton/yr	SF_6 ton/yr	PFC/HFC ton/yr[2]										**Total GHG** Mass Basis ton/yr[4]	**Total CO_2e** ton/yr[5]

[1] **GWP** (Global Warming Potential): Applicants must use the most current GWPs codified in Table A-1 of 40 CFR part 98. GWPs are subject to change, therefore, applicants need to check 40 CFR 98 to confirm GWP values.

[2] For **HFCs** or **PFCs** describe the specific HFC or PFC compound and use a separate column for each individual compound.

[3] For each new compound, enter the appropriate GWP for each HFC or PFC compound from Table A-1 in 40 CFR 98.

[4] Green house gas emissions on a **mass basis** is the ton per year green house gas emission before adjustment with its GWP.

[5] **CO_2e** means Carbon Dioxide Equivalent and is calculated by multiplying the TPY mass emissions of the green house gas by its GWP.

Section 3
Application Summary

Section 3

Application Summary

The **Application Summary** shall include a brief description of the facility and its process, the type of permit application, the applicable regulation (i.e. 20.2.72.200.A.X, or 20.2.73 NMAC) under which the application is being submitted, and any air quality permit numbers associated with this site. If this facility is to be collocated with another facility, provide details of the other facility including permit number(s). In case of a revision or modification to a facility, provide the lowest level regulatory citation (i.e. 20.2.72.219.B.1.d NMAC) under which the revision or modification is being requested. Also describe the proposed changes from the original permit, how the proposed modification will affect the facility's operations and emissions, de-bottlenecking impacts, and changes to the facility's major/minor status (both PSD & Title V).

The **Process Summary** shall include a brief description of the facility and its processes.

~~Startup, Shutdown, and Maintenance (SSM~~) routine or predictable emissions: Provide an overview of how SSM emissions are accounted for in this application. Refer to "Guidance for Submittal of Startup, Shutdown, Maintenance Emissions in Permit Applications (http://www.env.nm.gov/aqb/permit/app_form.html) for more detailed instructions on SSM emissions.

ConocoPhillips Company (COP) is submitting this New Source Review (NSR) permit application for the Zia Hills Central Facility in accordance with 20.2.72.202.D.1 NMAC. COP plans to increase production to 18,503 barrels of oil per day (BOPD) and 120 million standard cubic feet per day (MMscfd). The production increase will require utilization of the third and fourth triethylene glycol dehydrators (DEHY3-DEHY4) and full time use of the third stabilizer (STAB3).

Oil, gas, and water flow separately into the site. Gas is dehydrated then reinjected for gas lift or compressed to the sales line. Oil is stabilized then temporarily stored in tanks before being sold via pipeline. Water is processed, then temporarily stored before being shipped offsite via pipeline. A detailed process description is provided in Section 10.

SSM emissions associated with compressor or VRU downtime are represented at the flare and included with normal operations. Emissions associated with engine maintenance (blowdown and starter vents) are included with SSM emissions. Tank cleanout emissions are also included. Ten (10) tons of VOC emissions related to malfunctions are also included.

Section 4
Process Flow Sheet

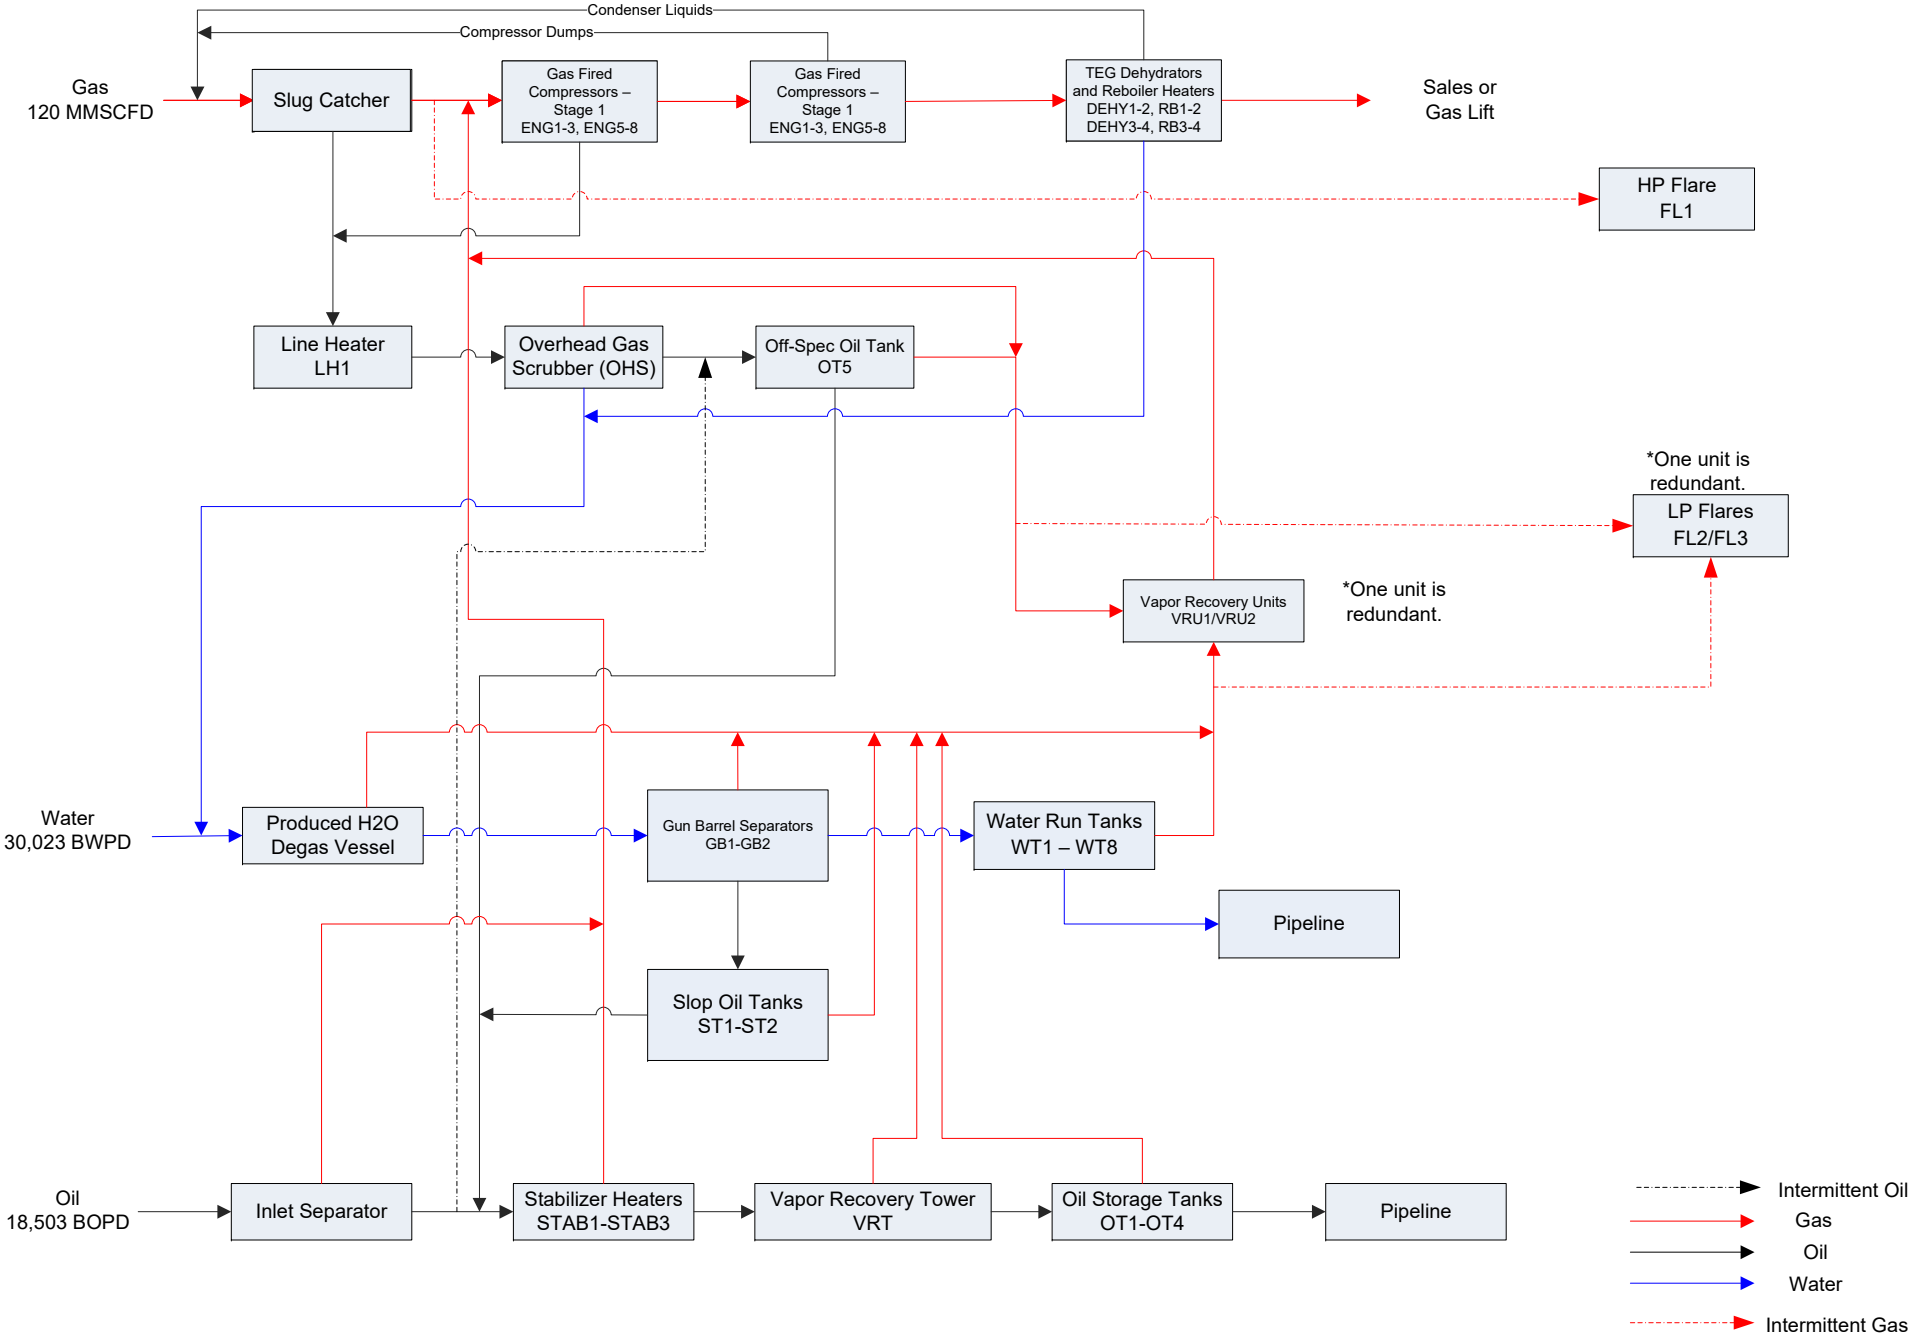
Section 4

Process Flow Sheet

A **process flow sheet** and/or block diagram indicating the individual equipment, all emission points and types of control applied to those points. The unit numbering system should be consistent throughout this application.

A process flow sheet is provided.

Zia Hills Central Facility
Process Flow Diagram



Section 5
Plot Plan

Section 5

Plot Plan Drawn To Scale

A **plot plan drawn to scale** showing emissions points, roads, structures, tanks, and fences of property owned, leased, or under direct control of the applicant. This plot plan must clearly designate the restricted area as defined in UA1, Section 1-D.12. The unit numbering system should be consistent throughout this application.

A plot plan is provided.

Section 6
Calculations

Section 6

All Calculations

Show all calculations used to determine both the hourly and annual controlled and uncontrolled emission rates. All calculations shall be performed keeping a minimum of three significant figures. Document the source of each emission factor used (if an emission rate is carried forward and not revised, then a statement to that effect is required). If identical units are being permitted and will be subject to the same operating conditions, submit calculations for only one unit and a note specifying what other units to which the calculations apply. All formulas and calculations used to calculate emissions must be submitted. The "Calculations" tab in the UA2 has been provided to allow calculations to be linked to the emissions tables. Add additional "Calc" tabs as needed. If the UA2 or other spread sheets are used, all calculation spread sheet(s) shall be submitted electronically in Microsoft Excel compatible format so that formulas and input values can be checked. Format all spread sheets and calculations such that the reviewer can follow the logic and verify the input values. Define all variables. If calculation spread sheets are not used, provide the original formulas with defined variables. Additionally, provide subsequent formulas showing the input values for each variable in the formula. All calculations, including those calculations are imbedded in the Calc tab of the UA2 portion of the application, the printed Calc tab(s), should be submitted under this section.

Tank Flashing Calculations: The information provided to the AQB shall include a discussion of the method used to estimate tank-flashing emissions, relative thresholds (i.e., NOI, permit, or major source (NSPS, PSD or Title V)), accuracy of the model, the input and output from simulation models and software, all calculations, documentation of any assumptions used, descriptions of sampling methods and conditions, copies of any lab sample analysis. If Hysis is used, all relevant input parameters shall be reported, including separator pressure, gas throughput, and all other relevant parameters necessary for flashing calculation.

SSM Calculations: It is the applicant's responsibility to provide an estimate of SSM emissions or to provide justification for not doing so. In this Section, provide emissions calculations for Startup, Shutdown, and Routine Maintenance (SSM) emissions listed in the Section 2 SSM and/or Section 22 GHG Tables and the rational for why the others are reported as zero (or left blank in the SSM/GHG Tables). Refer to "Guidance for Submittal of Startup, Shutdown, Maintenance Emissions in Permit Applications (http://www.env.nm.gov/aqb/permit/app_form.html) for more detailed instructions on calculating SSM emissions. If SSM emissions are greater than those reported in the Section 2, Requested Allowables Table, modeling may be required to ensure compliance with the standards whether the application is NSR or Title V. Refer to the Modeling Section of this application for more guidance on modeling requirements.

Glycol Dehydrator Calculations: The information provided to the AQB shall include the manufacturer's maximum design recirculation rate for the glycol pump. If GRI-Glycalc is used, the full input summary report shall be included as well as a copy of the gas analysis that was used.

Road Calculations: Calculate fugitive particulate emissions and enter haul road fugitives in Tables 2-A, 2-D and 2-E for:

1. If you transport raw material, process material and/or product into or out of or within the facility and have PER emissions greater than 0.5 tpy.
2. If you transport raw material, process material and/or product into or out of the facility more frequently than one round trip per day.

Significant Figures:
A. All emissions standards are deemed to have at least two significant figures, but not more than three significant figures.
B. At least 5 significant figures shall be retained in all intermediate calculations.
C. In calculating emissions to determine compliance with an emission standard, the following rounding off procedures shall be used:

(1) If the first digit to be discarded is less than the number 5, the last digit retained shall not be changed;
(2) If the first digit discarded is greater than the number 5, or if it is the number 5 followed by at least one digit other than the number zero, the last figure retained shall be increased by one unit; **and**
(3) If the first digit discarded is exactly the number 5, followed only by zeros, the last digit retained shall be rounded upward if it is an odd number, but no adjustment shall be made if it is an even number.
(4) The final result of the calculation shall be expressed in the units of the standard.

Control Devices: In accordance with 20.2.72.203.A(3) and (8) NMAC, 20.2.70.300.D(5)(b) and (e) NMAC, and 20.2.73.200.B(7) NMAC, the permittee shall report all control devices and list each pollutant controlled by the control device

regardless if the applicant takes credit for the reduction in emissions. The applicant can indicate in this section of the application if they chose to not take credit for the reduction in emission rates. For notices of intent submitted under 20.2.73 NMAC, only uncontrolled emission rates can be considered to determine applicability unless the state or federal Acts require the control. This information is necessary to determine if federally enforceable conditions are necessary for the control device, and/or if the control device produces its own regulated pollutants or increases emission rates of other pollutants.

Heater (LH1)
Emission rates for NOx, CO, VOC, PM, and HAP were calculated using AP-42 factors for external natural gas combustion sources, Table 1.4-1 and 1.4-2. PM_{10} and $PM_{2.5}$ emissions are set equal to PM emissions as a conservative measure. SO_2 emissions were calculated based on the units' fuel consumption and a maximum sulfur content of 5 gr/100 scf.

Stabilizer Heaters (STAB1-STAB3)
Stabilizer heater combustion emissions for NOx, CO, VOC, PM, and HAP were calculated using AP-42 factors for external natural gas combustion sources, Table 1.4-1 and 1.4-2. PM_{10} and $PM_{2.5}$ emissions are set equal to PM emissions as a conservative measure. SO_2 emissions were calculated based on the units' fuel consumption and a maximum sulfur content of 5 gr/100 scf. Note that only two of the stabilizers will be operated at any given time.

Oil Storage Tanks (OT1-OT4)
Flashing, working and breathing losses were estimated using Promax, assuming a maximum hourly throughput of based on a production rate of 18,503 BOPD. VRU1/VRU2 are used to capture tank vapors. During VRU downtime (263 hours), flares (FL2/FL3) with a control efficiency of 98% are used to reduce tank emissions. Oil is piped offsite.

Slop Oil Storage Tanks (ST1-ST2)
Flashing, working and breathing losses were estimated using Promax, assuming a throughput of 254 BOPD. VRU1/VRU2 are used to capture tank vapors. During VRU downtime (263 hours), flares (FL2/FL3) with a control efficiency of 98% are used to reduce tank emissions. Oil is routed to the inlet of the stabilizers.

Off-Specification Oil Storage Tank (OT5)
Flashing, working, and breathing losses were estimated using Promax. COP assumed a throughput of 593 BOPD per tank. VRU1/VRU2 are used to capture tank vapors. During VRU downtime (263 hours), flares (FL2/FL3) with a control efficiency of 98% are used to reduce tank emissions. Oil is returned to the stabilizers for further treatment.

Gun Barrel Separators (GB1-GB2)
Flashing and working and breathing emissions from the oil storage tanks were estimated using Promax, assuming a throughput of 30,023 BWPD. VRU1/VRU2 are used to capture tank vapors. During VRU downtime (263 hours), flares (FL2/FL3) with a control efficiency of 98% are used to reduce tank emissions. Water then flows to the water tanks, while any residual oil flows to ST1-ST2.

Water Tanks (WT1-WT8)
Working and breathing losses from all tanks were estimated using Promax, assuming a throughput of 30,023 BWPD. Flashing occurs in the gun barrel separators. VRU1/VRU2 are used to capture tank vapors. During VRU downtime (263 hours), flares (FL2/FL3) with a control efficiency of 98% are used to reduce tank emissions. Water is piped offsite.

High Pressure Flare (FL1)
The flare uses a continuously lit pilot. Emission rates for NO_x and CO are calculated using factors from TNRCC. H_2S, SO_2 and VOC emissions were calculated based on the gas analysis. Emission rates for NO_x and CO are calculated using factors from TNRCC. H_2S, SO_2 and VOC emissions were calculated based on the gas analysis. A VOC control efficiency of 98% was used.

Low Pressure Flares (FL2/FL3)
This is a redundant flare system. The flares use a continuously lit pilot. Emission rates for NO_x and CO are calculated using factors from TNRCC. H_2S, SO_2 and VOC emissions were calculated based on the gas analysis. Emission rates for NO_x and CO are calculated using factors from TNRCC. H_2S, SO_2 and VOC emissions were calculated based on the gas analysis. A VOC control efficiency of 98% was used.

Fugitives (FUG)
Fugitives for the facility were calculated in EPA/API average emission factors.

Compressor Engines (ENG1-3, ENG5-ENG8)
Emission factors used for the engines are a combination of manufacturer's data and AP-42 Section 3.2 emission factors. SO_2 emissions were calculated based on the units' fuel consumption and a maximum sulfur content of 5 grains per 100 standard cubic feet (5 gr/100 scf).

Triethylene Glycol Dehydrators (DEHY1-DEHY4, RB1-RB4)
There are two (2) dehydrators processing approximately 21 MMscfd (DEHY1-DEHY2) each and two (2) dehydrators processing approximately 41 MMscfd (DEHY3-DEHY4). The dehydrators utilize flash tanks and condensers to minimize emissions. Flash tank vapors and any vapors remaining after the condenser are used as fuel in the glycol regeneration heaters (RB1-RB4). Emissions were estimated using Promax.

Emission rates for NOx, CO, VOC, PM, and HAP from RB1-RB4 were calculated using AP-42 factors for external natural gas combustion sources, Table 1.4-1 and 1.4-2. PM_{10} and $PM_{2.5}$ emissions are set equal to PM emissions as a conservative measure. SO_2 emissions were calculated based on the units' fuel consumption and a maximum sulfur content of 5 gr/100 scf. Emissions were conservatively based on the assumption the higher Btu gas from the condenser was burned 8,760 hours per year.

Section 6.a

Green House Gas Emissions

(Submitting under 20.2.70, 20.2.72 20.2.74 NMAC)

Title V (20.2.70 NMAC), Minor NSR (20.2.72 NMAC), and PSD (20.2.74 NMAC) applicants must estimate and report greenhouse gas (GHG) emissions to verify the emission rates reported in the public notice, determine applicability to 40 CFR 60 Subparts, and to evaluate Prevention of Significant Deterioration (PSD) applicability. GHG emissions that are subject to air permit regulations consist of the sum of an aggregate group of these six greenhouse gases: carbon dioxide (CO_2), nitrous oxide (N_2O), methane (CH_4), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6).

Calculating GHG Emissions:

1. Calculate the ton per year (tpy) GHG mass emissions and GHG CO_2e emissions from your facility.
2. GHG mass emissions are the sum of the total annual tons of greenhouse gases without adjusting with the global warming potentials (GWPs). GHG CO_2e emissions are the sum of the mass emissions of each individual GHG multiplied by its GWP found in Table A-1 in 40 CFR 98 Mandatory Greenhouse Gas Reporting.
3. Emissions from routine or predictable start up, shut down, and maintenance must be included.
4. Report GHG mass and GHG CO_2e emissions in Table 2-P of this application. Emissions are reported in **short** tons per year and represent each emission unit's Potential to Emit (PTE).
5. All Title V major sources, PSD major sources, and all power plants, whether major or not, must calculate and report GHG mass and CO2e emissions for each unit in Table 2-P.
6. For minor source facilities that are not power plants, are not Title V, and are not PSD there are three options for reporting GHGs in Table 2-P: 1) report GHGs for each individual piece of equipment; 2) report all GHGs from a group of unit types, for example report all combustion source GHGs as a single unit and all venting GHGs as a second separate unit; 3) or check the following ☑ By checking this box, the applicant acknowledges the total CO2e emissions are less than 75,000 tons per year.

Sources for Calculating GHG Emissions:

- Manufacturer's Data
- AP-42 Compilation of Air Pollutant Emission Factors at http://www.epa.gov/ttn/chief/ap42/index.html
- EPA's Internet emission factor database WebFIRE at http://cfpub.epa.gov/webfire/
- 40 CFR 98 Mandatory Green House Gas Reporting except that tons should be reported in short tons rather than in metric tons for the purpose of PSD applicability.
- API Compendium of Greenhouse Gas Emissions Methodologies for the Oil and Natural Gas Industry. August 2009 or most recent version.
- Sources listed on EPA's NSR Resources for Estimating GHG Emissions at http://www.epa.gov/nsr/clean-air-act-permitting-greenhouse-gases:

Global Warming Potentials (GWP):
Applicants must use the Global Warming Potentials codified in Table A-1 of the most recent version of 40 CFR 98 Mandatory Greenhouse Gas Reporting. The GWP for a particular GHG is the ratio of heat trapped by one unit mass of the GHG to that of one unit mass of CO_2 over a specified time period.

"Greenhouse gas" for the purpose of air permit regulations is defined as the aggregate group of the following six gases: carbon dioxide, nitrous oxide, methane, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride. **(20.2.70.7 NMAC, 20.2.74.7 NMAC).** You may also find GHGs defined in 40 CFR 86.1818-12(a).

Metric to Short Ton Conversion:
Short tons for GHGs and other regulated pollutants are the standard unit of measure for PSD and title V permitting programs. 40 CFR 98 Mandatory Greenhouse Reporting requires metric tons.
1 metric ton = 1.10231 short tons (per Table A-2 to Subpart A of Part 98 – Units of Measure Conversions)

HAP TOTAL	1.07	4.67	0.00	0.00	0.00	0.00	0.02	0.00

[1] Uncontrolled emissions estimated using Promax. Tank vapors are controlled using a redundant VRU system and FL2/FL3.

[2] Controlled Emissions = Uncontrolled Emissions * (1 - VRU Efficiency) * (1 - Flare Destruction Efficiency)

[3] Annual controlled rate calculated by multiplying hourly emission rate by 8760 hours minus VRU downtime hours.

VRU Collection Efficiency	100%
VRU Downtime	3%
VRU Downtime (Hours)	263
Flare Destruction Efficiency	98%

CONOCOPHILLIPS COMPANY

ZIA HILLS CENTRAL FACILITY

WATER TANK VAPORS (WT1-WT8) TO FLARE - COMBUSTION EMISSIONS

Total Gas Production - SCF/Day (Includes W&B from water tanks)	5418
Total Gas Production - SCF/Hr (Includes 25% Safety Factor)	282
Total Gas Production - SCF/Year	59,326
Duration -Hours/Year (VRU Downtime)	263
Heating Value - BTU/SCF (Promax)	1065.03

Component	Emission Rate (lb/hr)	Emission Rate (TPY)
CO[1]	0.08	0.01
NOx[1]	0.04	0.00
SO_2[2]	0.00	0.00
H2S[2]	0.00	0.00
$PM_{10 \& 2.5}$[3]	0.00	0.00

[1] The CO and NOx emission factors of 0.2755 and 0.138 lb/MMBtu are based on TCEQ document RG-360A/11 (February 2012)

[2] H2S/SO2 example calculation: SCF/day * 14.7 / 10.73 / 528 * H2S Wt% * Gas MW. SO2 is calculated assuming MW ratio of 64.07:34.08.

[3] PM 10 & 2.5 emissions are based on AP-42, Section 1.4.

SSM - ENGINE BLOWDOWN EMISSIONS

Description	Facility Identification Number SSM
Number of Blowdowns per Year (1 per engine per month)	84
Number of Blowdowns per Hour	1
Blowdown Volume per Event, scf	830
Gas Stream Specific Gravity	N/A
Gas Stream Density, lb/scf (Promax)	0.5942
Max VOC Percentage in Gas Stream, wt% (Promax)	19.96%
Max HAP Percentage in Gas Stream, wt% (Promax)	0.46%
Max H_2S Percentage in Gas Stream, wt% (Promax)	0.000%
VOC Hourly Emission Rates (lb/hr): [a]	98.45
VOC Annual Emission Rates (T/yr): [b]	4.13
HAP Hourly Emission Rates (lb/hr): [a]	2.27
HAP Annual Emission Rates (T/yr): [b]	0.095
H_2S Hourly Emission Rates (lb/hr): [a]	0.00000
H_2S Annual Emission Rates (T/yr): [b]	0.000000
Controlled VOC Hourly Emission Rates (lb/hr):[c]	1.97
Controlled VOC Annual Emission Rates (T/yr):[d]	0.08
Controlled HAP Hourly Emission Rates (lb/hr):[c]	0.0453
Controlled HAP Annual Emission Rates (T/yr): [d]	0.00190
Controlled H_2S Hourly Emission Rates (lb/hr):[c]	0.000000
Controlled H_2S Annual Emission Rates (T/yr):[d]	0.00000000

[a] Hourly blowdown VOC, H_2S, and benzene emission rates are caclulated as follows:

VOC lb/hr = (1 blowdown/hr) * (830 scf/blowdown) * (0.5942 lb/scf) * (19.96% VOC in Stream) = 98.45 lb/hr

[b] Annual blowdown VOC, H_2S, and benzene emission rates are calculated as follows:

VOC T/yr = (84 blowdowns/yr) * (830 scf/blowdown) * (0.5942 lb/scf) * (19.96% VOC in Stream) / (2,000 lb/T) = 4.13 T/yr

[c] Hourly controlled blowdown VOC, H_2S, and benzene emissions are calculated based upon a conservative estimate of the portion of each consituent in the volume known to blowdown from the compressor. An example calculation for VOC for COMP-BD follows:

VOC lb/hr = (1 blowdown/hr) * (830 scf/blowdown) * (0.5942 lb/scf) * (19.96% VOC in Stream) * (100% - 98% Controlled at Flare) = 1.97 lb/hr

[d] Annual controlled blowdown VOC, H_2S, and benzene emission rates are calculated as follows:

VOC lb/hr = (84 blowdowns/yr) * (830 scf/blowdown) * (0.5942 lb/scf) * (19.96% VOC in Stream) / (2,000 lb/T) * (100% - 98% Controlled at Flare) = 0.08 T/yr

SSM - ENGINE STARTER VENT EMISSIONS

Description	Facility Identification Number ENG-SV
Number of Events per Year (2 per month per engine)	168
Number of Events per Hour	1
Volume per Event, scf	900
Gas Stream Specific Gravity	N/A
Gas Stream Density, lb/scf [a]	0.5942
Max VOC Percentage in Gas Stream, wt% (Promax)	19.96%
Max HAP Percentage in Gas Stream, wt% (Promax)	0.46%
Max H_2S Percentage in Gas Stream, wt% (Promax)	0.0000%
VOC Hourly Emission Rates (lb/hr): [a]	106.75
VOC Annual Emission Rates (T/yr): [b]	8.97
HAP Hourly Emission Rates (lb/hr): [a]	2.46
HAP Annual Emission Rates (T/yr): [b]	0.206
H_2S Hourly Emission Rates (lb/hr): [a]	0.000
H_2S Annual Emission Rates (T/yr): [b]	0.000
Controlled VOC Hourly Emission Rates (lb/hr):[c]	2.13
Controlled VOC Annual Emission Rates (T/yr):[d]	0.18
Controlled HAP Hourly Emission Rates (lb/hr):[c]	0.0491
Controlled HAP Annual Emission Rates (T/yr): [d]	0.00413
Controlled H_2S Hourly Emission Rates (lb/hr):[c]	0.000000
Controlled H_2S Annual Emission Rates (T/yr):[d]	0.0000000

[a] Hourly VOC, H_2S, and benzene emission rates are caclulated as follows:

VOC lb/hr = (1 event/hr) * (900 scf/event) * (0.5942 lb/scf) * (19.96% VOC in Stream) = 106.75 lb/hr

[b] Annual VOC, H_2S, and benzene emission rates are calculated as follows:

VOC T/yr = (168 events/yr) * (900 scf/events) * (0.5942 lb/scf) * (19.96% VOC in Stream) / (2,000 lb/T) = 8.97 T/yr

[c] Hourly controlled VOC, H_2S, and benzene emissions are calculated as follows:

VOC lb/hr = (1 event/hr) * (900 scf/event) * (0.5942 lb/scf) * (19.96% VOC in Stream) * (100% - 98% Controlled at Flare) = 2.13 lb/hr

[d] Annual controlled VOC, H_2S, and benzene emission rates are calculated as follows:

VOC lb/hr = (168 events/yr) * (900 scf/events) * (0.5942 lb/scf) * (19.96% VOC in Stream) / (2,000 lb/T) * (100% - 98% Controlled at Flare) = 0.18 T/yr

ENGINE BLOWDOWN AND STARTER VENT COMBUSTION EMISSIONS

EPN	FIN	Description	LHV[a] (Btu/scf)	Waste Gas Flow Rate Hourly (MMBtu/hr)	Waste Gas Flow Rate Annual (MMBtu/yr)	Pollutant	Emission Factors	Units	Potential to Emit Hourly[b] (lb/hr)	Potential to Emit Annual[c] (T/yr)
FL1	FL1	Process Flare	1,209.90	1.09	182.94	NO_X	0.1380	lb/MMBtu	0.15	0.01
		Engine Starter Vents				CO	0.2755	lb/MMBtu	0.30	0.03
						$PM/PM_{10}/PM_{2.5}$	-- [d]	--	--	--
						SO_2	0.000	lb/hr H_2S	0.00	0.00
FL1	FL1	Process Flare	1,209.90	1.00	84.35	NO_X	0.1380	lb/MMBtu	0.14	0.01
		Compressor Blowdown Events				CO	0.2755	lb/MMBtu	0.28	0.01
						$PM/PM_{10}/PM_{2.5}$	-- [d]	--	--	--
						SO_2	0.000	lb/hr H_2S	0.00	0.00

[a] Waste gas stream lower heating values were taken from HP gas analysIs.

[b] Emission Factors for CO and NO_X are based upon the Draft TNRCC Guidance Document for Flares and Vapor Oxidizers (dated 10/00) for other high-Btu flares. An example calculation for hourly CO emissions for FL1 follows:

CO (lb/hr) = (Hourly Waste Gas Flow Rate, MMBtu/hr) * (Emission Factor, lb/MMBtu)
CO (lb/hr) = (1.09 MMBtu/hr) * (0.2755 lb/MMBtu)
CO (lb/hr) = 0.30

[c] An example calculation for annual CO emissions for FL1 follows:

CO (T/yr) = (Annual Waste Gas Flow Rate, MMBtu/yr) * (Emission Factor, lb/MMBtu) * (1 T/2,000 lb)
CO (T/yr) = (182.94 MMBtu/yr) * (0.2755 lb/MMBtu) * (1 T/2,000 lb)
CO (T/yr) = 0.03

[d] The process flare is smokeless per 40 CFR §60.18 requirements; therefore, PM emissions are negligible.

Section 7
Information Used to Determine Emissions

Section 7

Information Used To Determine Emissions

Information Used to Determine Emissions shall include the following:

- ☐ If manufacturer data are used, include specifications for emissions units and control equipment, including control efficiencies specifications and sufficient engineering data for verification of control equipment operation, including design drawings, test reports, and design parameters that affect normal operation.
- ☐ If test data are used, include a copy of the complete test report. If the test data are for an emissions unit other than the one being permitted, the emission units must be identical. Test data may not be used if any difference in operating conditions of the unit being permitted and the unit represented in the test report significantly effect emission rates.
- ☑ If the most current copy of AP-42 is used, reference the section and date located at the bottom of the page. Include a copy of the page containing the emissions factors, and clearly mark the factors used in the calculations.
- ☐ If an older version of AP-42 is used, include a complete copy of the section.
- ☐ If an EPA document or other material is referenced, include a complete copy.
- ☐ Fuel specifications sheet.
- ☑ If computer models are used to estimate emissions, include an input summary (if available) and a detailed report, and a disk containing the input file(s) used to run the model. For tank-flashing emissions, include a discussion of the method used to estimate tank-flashing emissions, relative thresholds (i.e., permit or major source (NSPS, PSD or Title V)), accuracy of the model, the input and output from simulation models and software, all calculations, documentation of any assumptions used, descriptions of sampling methods and conditions, copies of any lab sample analysis.

Supporting documentation is provided.

A cooling system safety factor of 0% has been added to the cooling system sizing criteria.			

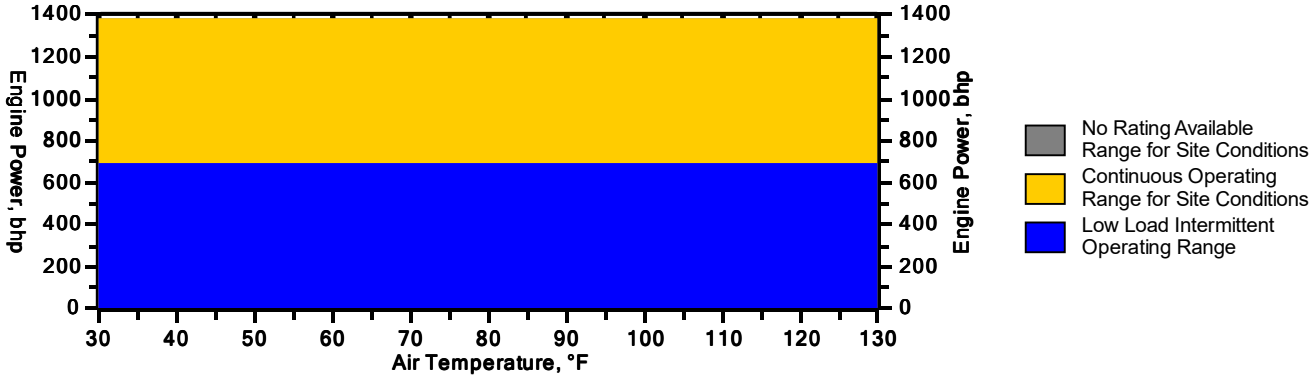
CONDITIONS AND DEFINITIONS

Engine rating obtained and presented in accordance with ISO 3046/1, adjusted for fuel, site altitude and site inlet air temperature. 100% rating at maximum inlet air temperature is the maximum engine capability for the specified fuel at site altitude and maximum site inlet air temperature. Maximum rating is the maximum capability at the specified aftercooler inlet temperature for the specified fuel at site altitude and reduced inlet air temperature. Lowest load point is the lowest continuous duty operating load allowed. No overload permitted at rating shown.

For notes information consult page three.

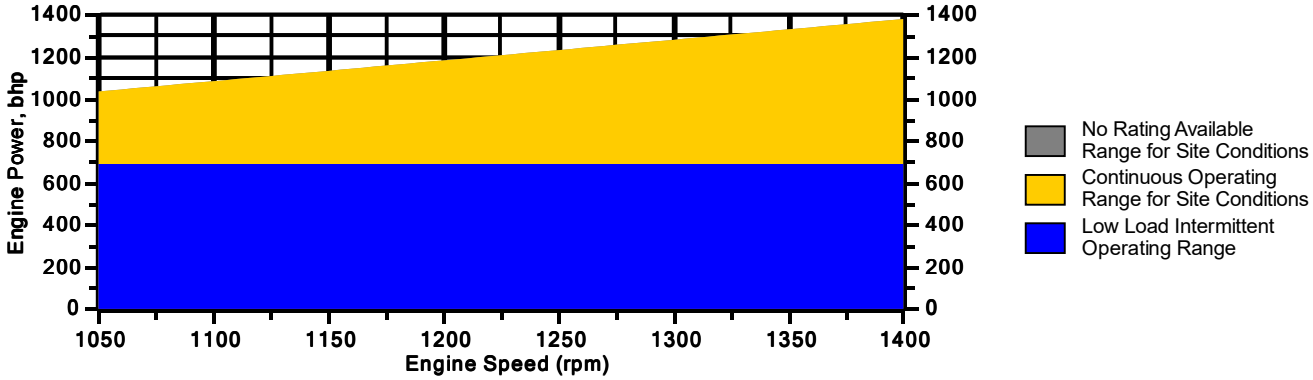
Engine Power vs. Inlet Air Temperature

Data represents temperature sweep at 3000 ft and 1400 rpm



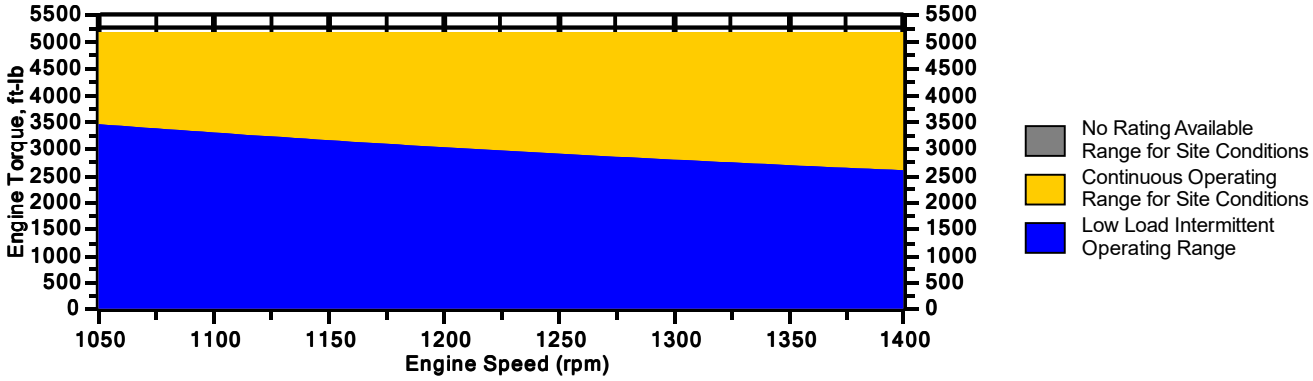
Engine Power vs. Engine Speed

Data represents speed sweep at 3000 ft and 105 ºF



Engine Torque vs. Engine Speed

Data represents speed sweep at 3000 ft and 105 ºF



Note: At site conditions of 3000 ft and 105°F inlet air temp., constant torque can be maintained down to 1050 rpm. The minimum speed for loading at these conditions is 1050 rpm.

NOTES

1. Fuel pressure range specified is to the engine fuel pressure regulator. Additional fuel train components should be considered in pressure and flow calculations.

2. Engine rating is with two engine driven water pumps. Tolerance is ± 3% of full load.

3. Fuel consumption tolerance is ± 3.0% of full load data.

4. Air flow value is on a 'wet' basis. Flow is a nominal value with a tolerance of ± 5 %.

5. Inlet and Exhaust Restrictions must not exceed A&I limits based on full load flow rates from the standard technical data sheet.

6. Inlet manifold pressure is a nominal value with a tolerance of ± 5 %.

7. Exhaust temperature is a nominal value with a tolerance of (+)63°F, (-)54°F.

8. Exhaust flow value is on a "wet" basis. Flow is a nominal value with a tolerance of ± 6 %.

9. Emissions data is at engine exhaust flange prior to any after treatment.

10. Values listed are higher than nominal levels to allow for instrumentation, measurement, and engine-to-engine variations. They indicate the maximum values expected under steady state conditions. Fuel methane number cannot vary more than ± 3. THC, NMHC, and NMNEHC do not include aldehydes. An oxidation catalyst may be required to meet Federal, State or local CO or HC requirements.

11. VOCs - Volatile organic compounds as defined in US EPA 40 CFR 60, subpart JJJJ

12. Exhaust Oxygen level is the result of adjusting the engine to operate at the specified NOx level. Tolerance is ± 0.5.

13. Heat rejection values are nominal. Tolerances, based on treated water, are ± 10% for jacket water circuit, ± 50% for radiation, ± 20% for lube oil circuit, and ± 5% for aftercooler circuit.

14. Aftercooler heat rejection includes an aftercooler heat rejection factor for the site elevation and inlet air temperature specified. Aftercooler heat rejection values at part load are for reference only. Do not use part load data for heat exchanger sizing.

15. Cooling system sizing criteria are maximum circuit heat rejection for the site, with applied tolerances.

Fuel Specific Heat Ratio (K):	1.286

CONDITIONS AND DEFINITIONS

Caterpillar Methane Number represents the knock resistance of a gaseous fuel. It should be used with the Caterpillar Fuel Usage Guide for the engine and rating to determine the rating for the fuel specified. A Fuel Usage Guide for each rating is included on page 2 of its standard technical data sheet.

RPC always applies to naturally aspirated (NA) engines, and turbocharged (TA or LE) engines only when they are derated for altitude and ambient site conditions.

Project specific technical data sheets generated by the Caterpillar Gas Engine Rating Pro program take the Caterpillar Methane Number and RPC into account when generating a site rating.

Fuel properties for Btu/scf calculations are at 60F and 14.696 psia.

Caterpillar shall have no liability in law or equity, for damages, consequently or otherwise, arising from use of program and related material or any part thereof.

FUEL LIQUIDS

Field gases, well head gases, and associated gases typically contain liquid water and heavy hydrocarbons entrained in the gas. To prevent detonation and severe damage to the engine, hydrocarbon liquids must not be allowed to enter the engine fuel system. To remove liquids, a liquid separator and coalescing filter are recommended, with an automatic drain and collection tank to prevent contamination of the ground in accordance with local codes and standards.

To avoid water condensation in the engine or fuel lines, limit the relative humidity of water in the fuel to 80% at the minimum fuel operating temperature.

Warranty & Notes:

- **If Pre-Emission levels are not as noted above, contact Maxim Silencers for a re-quote.**
- To achieve Post Emissions levels detailed above, exhaust temperature and Pre-Emission data must be as specified.
- Maximum allowable exhaust temperature at core face is 1350°F.
- If applicable, the engine will require an air/fuel ratio controller to meet above emission levels. For Rich Burn engines λ must be 0.96 - 0.99.
- Catalyst cleaning/regeneration required, if initial backpressure increases by 2" of WC.
- Engine operation to be stable and reproducible.
- QAC is not designed to withstand a backfire, therefore measures should be taken prior to QAC unit to alleviate backfire pressure.
- Maximum lubrication oil consumption rate to be less than 0.0015 lb/bhp/hr.
- Lube oil sulfate ash contents should not exceed 0.5%.
- Phosphorus and/or Zinc should not exceed 5 ppmv in the exhaust stream.
- A high temperature alarm/shutdown to be maintained at downstream of catalyst at 1300°F.
- Fuel not to contain heavy or transition metals such as Pb, Ar, Zn, Cu, Sn, Fe, Ba, Ni, Cr etc.
- Chlorinated or Silicone containing compounds in the exhaust not to exceed 1 ppmv.
- Sulfur compounds in the exhaust gas stream not to exceed 25 ppmv.
- Performance guarantee is voided should the catalyst become masked or de-activated by any contaminant in the exhaust stream.
- Engine to be maintained and operated in accordance within manufacturer's recommended practice.
- Under no condition will Maxim Silencers assume any contingent liabilities.
- Operating manual is available online at www.maximsilencers.com or contact a Maxim sales representative.
- Nomenclature: QAC4-292-8, 4 is grade (Super Critical), 29 is catalyst block size, 2 is no. of catalyst(s) and 8 is flange diameter.
- Organic PM10 are estimate only and not a guarantee because of the variability in fuels and additives which change PM10.
- Maxim Silencers standard one year warranty applies.

Rev level: 86

RE: NSPS Subpart JJJJ Applicability Summary

Date:

Service Order Number:	
Service Site Name:	
CSI/Compressco Unit Number:	811309
Engine Make & Model:	Caterpillar G3516J
Engine Serial Number:	N6W00861
Engine Type:	4SLB
Engine Category:	New
OEM Rated Engine Horsepower:	1380 HP
Engine Manufacture Date:	10/01/2018
"New" Engine Subject to NSPS JJJJ?	Yes – 1.0 g/NOx, 2.0 g/CO, 0.7 g/VOC
Engine Displacement:	69.0 Liters
Engine RPM:	1,400
Fuel Type:	Natural Gas
Control Equipment:	ADEM III / Catalytic Converter
Compressor Make & Model:	Ariel JGT/4
Number of Stages:	3
Compressor OEM Rated HP:	2600 HP
Compressor Rated Speed:	1,500
Compressor Serial Number:	F-57947
Compressor Type:	Reciprocating
Compressor Manufacture Date:	10/01/2018
Compressor NSPS Quad O Status:	
Engine Certification:	None

Reconstruction Status: Since the date of manufacture noted above, this engine has not been modified per 40 CFR 60.14, or reconstructed per 40 CFR 60.15.

Please contact Brad Johnson with any questions regarding this information at 432-495-3242 or brad.johnson@compressor-systems.com.

NOTE: UNIT SPECIFICATIONS AND NUMBERS LISTED IN THIS DATA SHEET ARE USED FOR REFERENCE PURPOSES ONLY IN ORDER TO OBTAIN ANY PERMITS REQUIRED FOR PROVISION OF THE COMPRESSION SERVICES AT THE SERVICE SITE. NOTWITHSTANDING THE FOREGOING, THE LISTING OF THE UNIT SPECIFICATIONS AND NUMBERS ON THIS DATA SHEET SHALL NOT BE CONSTRUED AS LIMITING IN ANY WAY CONTRACTOR'S CONTRACTUAL RIGHT TO FREELY SUBSTITUTE THE UNIT BEING USED TO PROVIDE COMPRESSION AND RELATED PRODUCTION ENHANCEMENT SERVICES UNDER THE MASTER AGREEMENT AND THE APPLICABLE SERVICE ORDER AT ANY TIME, IN ITS SOLE DISCRETION, AND WITHOUT NOTICE, SO LONG AS SUCH SUBSTITUTION DOES NOT UNREASONABLY INTERFERE WITH THE PROVISION OF SUCH SERVICES OR CUSTOMER'S OPERATIONS AT THE SITE. UPON ANY SUBSTITUTION OR REPLACEMENT OF ANY UNIT USED FOR THE PROVISION OF THE COMPRESSION SERVICES, CONTRACTOR SHALL PROVIDE CUSTOMER WITH A NEW DATA SHEET REFLECTING THE APPLICABLE UNIT SPECIFICATIONS AND NUMBERS.

A cooling system safety factor of 0% has been added to the cooling system sizing criteria.			

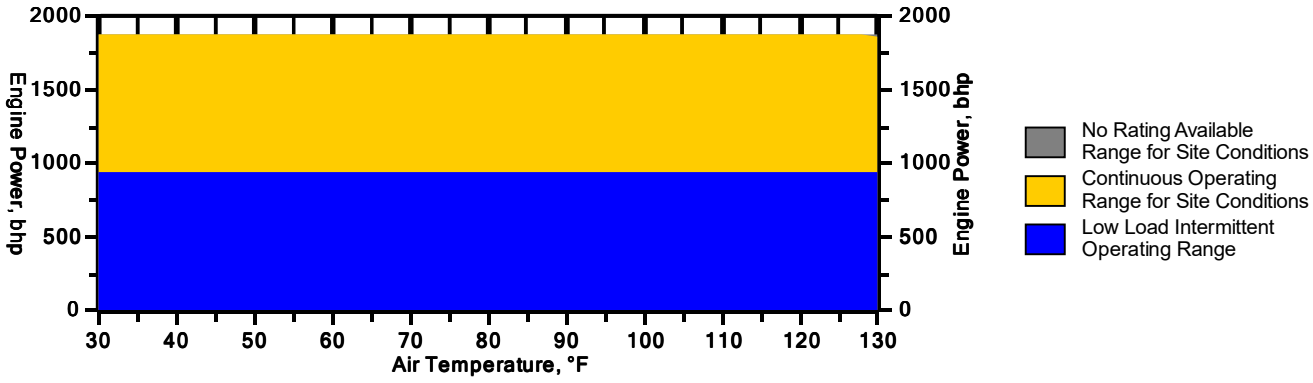
CONDITIONS AND DEFINITIONS

Engine rating obtained and presented in accordance with ISO 3046/1, adjusted for fuel, site altitude and site inlet air temperature. 100% rating at maximum inlet air temperature is the maximum engine capability for the specified fuel at site altitude and maximum site inlet air temperature. Maximum rating is the maximum capability at the specified aftercooler inlet temperature for the specified fuel at site altitude and reduced inlet air temperature. Lowest load point is the lowest continuous duty operating load allowed. No overload permitted at rating shown.

For notes information consult page three.

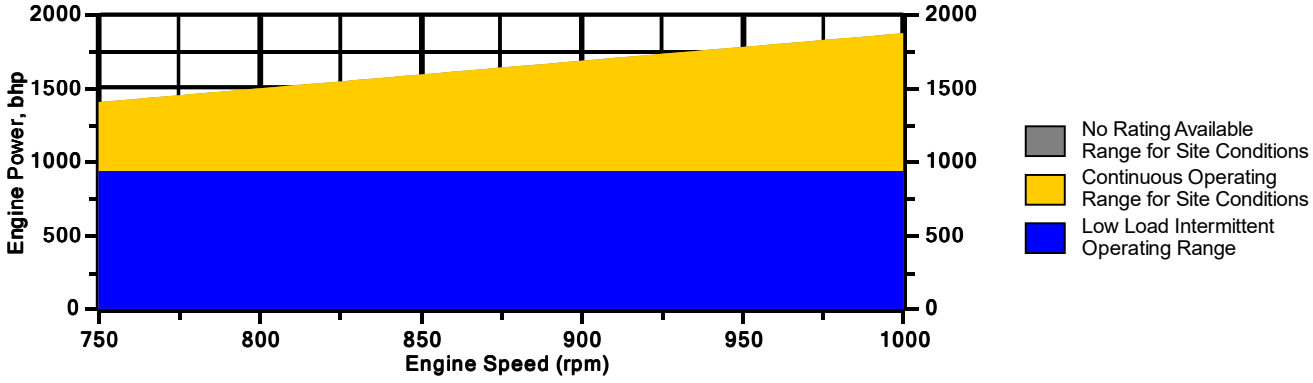
Engine Power vs. Inlet Air Temperature

Data represents temperature sweep at 3000 ft and 1000 rpm



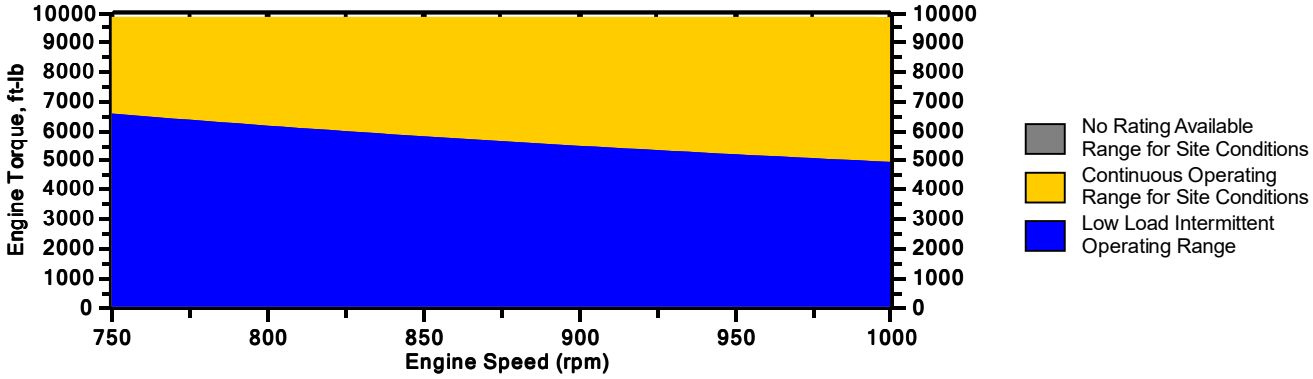
Engine Power vs. Engine Speed

Data represents speed sweep at 3000 ft and 105 ºF



Engine Torque vs. Engine Speed

Data represents speed sweep at 3000 ft and 105 ºF



Note: At site conditions of 3000 ft and 105°F inlet air temp., constant torque can be maintained down to 750 rpm. The minimum speed for loading at these conditions is 750 rpm.

NOTES

1. Fuel pressure range specified is to the engine gas shutoff valve (GSOV). Additional fuel train components should be considered in pressure and flow calculations.

2. Engine rating is with two engine driven water pumps. Tolerance is ± 3% of full load.

3. Fuel consumption tolerance is ± 2.5% of full load data.

4. Air flow value is on a 'wet' basis. Flow is a nominal value with a tolerance of ± 5 %.

5. Inlet and Exhaust Restrictions must not exceed A&I limits based on full load flow rates from the standard technical data sheet.

6. Inlet manifold pressure is a nominal value with a tolerance of ± 5 %.

7. Exhaust temperature is a nominal value with a tolerance of (+)63°F, (-)54°F.

8. Exhaust flow value is on a "wet" basis. Flow is a nominal value with a tolerance of ± 6 %.

9. Emissions data is at engine exhaust flange prior to any after treatment.

10. Values listed are higher than nominal levels to allow for instrumentation, measurement, and engine-to-engine variations. They indicate the maximum values expected under steady state conditions. Fuel methane number cannot vary more than ± 3. THC, NMHC, and NMNEHC do not include aldehydes. An oxidation catalyst may be required to meet Federal, State or local CO or HC requirements.

11. VOCs - Volatile organic compounds as defined in US EPA 40 CFR 60, subpart JJJJ

12. Exhaust Oxygen level is the result of adjusting the engine to operate at the specified NOx level. Tolerance is ± 0.5.

13. Heat rejection values are nominal. Tolerances, based on treated water, are ± 10% for jacket water circuit, ± 50% for radiation, ± 20% for lube oil circuit, and ± 5% for aftercooler circuit.

14. Aftercooler heat rejection includes an aftercooler heat rejection factor for the site elevation and inlet air temperature specified. Aftercooler heat rejection values at part load are for reference only. Do not use part load data for heat exchanger sizing.

15. Cooling system sizing criteria are maximum circuit heat rejection for the site, with applied tolerances.

Constituent	Abbrev	Mole %	Norm

Fuel Makeup:	Gas Analysis
Unit of Measure:	English

Calculated Fuel Properties

Caterpillar Methane Number:	59.2
Lower Heating Value (Btu/scf):	1115
Higher Heating Value (Btu/scf):	1230
WOBBE Index (Btu/scf):	1329
THC: Free Inert Ratio:	119.2
Total % Inerts (% N2, CO2, He):	0.83%
RPC (%) (To 905 Btu/scf Fuel):	100%
Compressibility Factor:	0.997
Stoich A/F Ratio (Vol/Vol):	11.57
Stoich A/F Ratio (Mass/Mass):	16.45
Specific Gravity (Relative to Air):	0.704
Fuel Specific Heat Ratio (K):	1.286

CONDITIONS AND DEFINITIONS

Caterpillar Methane Number represents the knock resistance of a gaseous fuel. It should be used with the Caterpillar Fuel Usage Guide for the engine and rating to determine the rating for the fuel specified. A Fuel Usage Guide for each rating is included on page 2 of its standard technical data sheet.

RPC always applies to naturally aspirated (NA) engines, and turbocharged (TA or LE) engines only when they are derated for altitude and ambient site conditions.

Project specific technical data sheets generated by the Caterpillar Gas Engine Rating Pro program take the Caterpillar Methane Number and RPC into account when generating a site rating.

Fuel properties for Btu/scf calculations are at 60F and 14.696 psia.

Caterpillar shall have no liability in law or equity, for damages, consequently or otherwise, arising from use of program and related material or any part thereof.

FUEL LIQUIDS

Field gases, well head gases, and associated gases typically contain liquid water and heavy hydrocarbons entrained in the gas. To prevent detonation and severe damage to the engine, hydrocarbon liquids must not be allowed to enter the engine fuel system. To remove liquids, a liquid separator and coalescing filter are recommended, with an automatic drain and collection tank to prevent contamination of the ground in accordance with local codes and standards.

To avoid water condensation in the engine or fuel lines, limit the relative humidity of water in the fuel to 80% at the minimum fuel operating temperature.

WARRANTY

EMIT Technologies, Inc. warrants that the goods supplied will be free from defects in workmanship by EMIT Technologies, Inc. for a period of one (1) year from date of shipment. EMIT Technologies, Inc. will not be responsible for any defects which result from improper use, neglect, failure to properly maintain or which are attributable to defects, errors or omissions in any drawings, specifications, plans or descriptions, whether written or oral, supplied to EMIT Technologies, Inc. by Buyer.

Catalyst performance using an EMIT Air/Fuel ratio controller is dependent upon properly defined set-points, variable with engine and fuel gas composition. Air/fuel ratio controller performance is guaranteed, but not limited, to fuel gas with an HHV content of 1400 BTU/SCF.

Catalyst performance will be guaranteed for a period of 1 year from installation, or 8760 operating hours, whichever comes first. The catalyst shall be operated with an automatic air/fuel ratio controller. The performance guarantee shall not cover the effects of excessive ash masking due to operation at low load, improper engine maintenance, or inappropriate lubrication oil. The performance guarantee shall not cover the effects of continuous engine misfires (cylinder or ignition) exposing the catalyst to excessive exothermic reaction temperatures.

Unless otherwise stated the exhaust temperature operating range at the converter inlet is 600°F minimum for oxidation catalyst and 750°F for NSCR
catalyst and 1250°F maximum.

If a high temperature shut down switch is not installed, thermal deactivation of catalyst at temperatures above 1300 °F is not covered. The catalyst conversion efficiencies (% reduction) will be guaranteed for engine loads of 50 to 100 percent.
Engine lubrication oil shall contain less than 0.6% ash (by weight) with a maximum allowable specific oil consumption of 0.01 gal/bhp-hr. The maximum ash loading on the catalyst shall be limited to 350 g/m3. Phosphorous and zinc additives are limited to 0.03% (by weight).

The catalyst must not be exposed to the following known poisoning agents, including: iron, nickel, sodium, chromium, arsenic, zinc, lead, phosphorous, silicon, potassium, magnesium, copper, tin, and mercury. Total poison concentrations in the gas are limited to 0.3 ppm.

Shipment - Promised shipping dates are approximate and are not guaranteed and are from the point of manufacture. EMIT Technologies, Inc. will not be liable for any loss, damage or delay in manufacture or delivery resulting from any cause beyond its control including, but not limited to a period equal to the time lost by reason of that delay. All products will be crated as per best practice to prevent any damage during shipment. Unless otherwise specified, Buyer will pay for any special packing and shipping requirements. Acceptance of goods by common carrier constitutes delivery to Buyer. EMIT Technologies, Inc. shall not be responsible for goods damaged or lost in transit.

PAYMENT TERMS AND ADVANCE PAYMENT REQUIREMENT

Terms: Credit is extended to purchaser for net 30 time period. If payment is not received in the net 30 timeframe, interest on the unpaid balance will accrue at a rate of 1.5% per month from the invoice date.

Advance Payment Requirement: Proposals with a project value of $100,000 or greater, and 60 days or greater time to completion, will require an advance payment of 30% of the total value. The advance payment will be invoiced to the customer upon receipt of the customer's purchase order. Advance payment is due 30 days after the date of the invoice. If payment is not received in the net 30 timeframe, interest on the unpaid balance will accrue at the rate of 1.5% per month from the invoice date. Failure to pay this invoice may delay completion of the project outlined in this proposal.

Order Cancellation Terms: Upon cancellation of an order once submittal of a Purchase Order has occurred, the customer will pay a 25% restocking fee for Catalyst Housings, Catalyst Elements, and Air/Fuel Ratio Controllers; 50% restocking fee for Cooler Top Solutions, Exhaust System Accessories, and other Custom Built Products; 100% of all associated shipping costs incurred by EMIT; 100% of all project expenses incurred by EMIT for Field Services.

HP Flare

Design Information (Estimated):

Source	HP #1	HP #2	HP #3
Gas MW	20.5	20.5	27.0
Gas LHV (Btu/Scf)	1121	1121	1436
Max Flow Rate (MMScfd)	30	15	24
Available Pressure (psig)	35	35	35
Temperature (°F)	7	7	40

Scope of Supply:

Qty	Equipment
1	Skid Mounted, Guy-Supported Flare Stack - Corrosion Allowance = 1/16”
1	Multi-Jet Flare Tip (MJ) - Maximum Exit Velocity = Mach 1.0
1	Assist Injection Ring
2	HSLF Pilot w/ Type K Thermocouple - Duplex Thermocouple - Individual Fuel Gas Supply Lines - 100’ High Temperature HEI/TC Whip
2	Retractable Pilot Components
1	Automatic Ignition/Monitoring Panel (Z-Purge) - Junction Box and LCP to be 316SS MOC, Nema 4X

Required Utilities:

Consumer	Utility Type	Consumption	Supply
Pilot Gas	Fuel Gas	130 Scfh	15 psig
Purge Gas*	Fuel Gas	100 Scfh	15 psig
Assist Gas	Fuel Gas	160 Scfm (Max)	15 psig
Control Panel	Electricity	10 A	120 VAC / 1 Ph / 60 Hz

*Purge gas to be oxygen free and not go to dew point at operating temperatures.

Customer Connections (Estimated, TBC by customer):

Service	Size	Type	Rating
Flare Gas	10"	RF	150#
Pilot Gas	1/2"	NPT	3000#
Assist Gas	1"	NPT	3000#

Equipment Description:

Skid Mounted, Guy-Supported Flare Stack	The stack is mounted onto a carbon steel skid that eliminates the need for a concrete foundation. The skid only needs to be set on firm, flat soil and then connected to the provided guy wires, screw anchors and tackle. The skid mounting will help minimize field installation and foundation costs.
Multi-Jet Flare Tip (MJ)	The flare tip uses multi-jet technology to break up the exiting gas to allow for more fuel and air interaction to increase smokeless flaring. Components located in the high heat zone will be made of 310SS or equivalent casting material. The tip will provide a VOC destruction efficiency of at least 98 wt%.
Assist Injection Ring	For low pressure applications and/or heavy gas compositions, an assist ring is provided for smokeless operation. The assist gas injection system utilizes compressed air or natural gas (@ 15 psig) to increase air and gas mixing in the combustion zone, which eliminates any smoke that may form in the flames. Simply opening a manual valve located at the base of the flare to the point where the smoke goes away is the only requirement.
HSLF Pilot w/ Type K Thermocouple	The premix pilot is proven to stay lit in hurricane force weather conditions. Testing has shown that a stable flame is present even in wind speeds greater than 150 mph in addition to rainfall of over 10 inches per hour. The pilot will be equipped with a Type K thermocouple for continuous monitoring of the pilot status. The pilot also meets or exceeds API 537 design requirements.
Retractable Pilot Components	For ease of service, instead of retracting the entire pilot, only the components that may need service are made retractable. This ensures that the location of the pilot with relation to the flare tip is maintained, ensuring proper ignition every time. The ignition probe and thermocouple are the only components that potentially require regular maintenance. Both components will be retractable so that maintenance can be performed without needing a shutdown of the flare or any special equipment.
Automatic Ignition/Monitoring Panel (Z-Purge)	The automatic pilot ignition and monitoring panel will continuously monitor the pilot and attempt to relight if a pilot failure signal is received. The control panel will require customer supplied electricity and also be skid mounted. A Z-Purge is included for installation in a Cl 1 Div 2 area.

LP Flare

Design Information (Estimated):

Source	LP #1	LP #2
Gas MW	48.5	48.5
Gas LHV (Btu/Scf)	2413	2413
Max Flow Rate (MMScfd)	3	1
Available Pressure (psig)	0.2	0.2
Temperature (°F)	120	120

Scope of Supply:

Qty	Equipment
1	Self-Supported Flare Stack - Corrosion Allowance = 1/16”
1	Air Assisted Flare Tip (AF)
1	Velocity Seal
1	Air Assist Blower (VFD Compatible)
2	HSLF Pilot w/ Type K Thermocouple - Duplex Thermocouple - Individual Fuel Gas Supply Lines - 100’ High Temperature HEI/TC Whip
2	Retractable Pilot Components
1	Automatic Ignition/Monitoring Panel (Z-Purge) - Junction Box and LCP to be 316SS MOC, Nema 4X
1	Group D Deflagration Arrester – 12” Dia.

Required Utilities:

Consumer	Utility Type	Consumption	Supply
Pilot Gas	Fuel Gas	130 Scfh	15 psig
Purge Gas*	Fuel Gas	230 Scfh	15 psig
Blower	Electricity	20 hp (27 A)	480 VAC / 3 Ph / 60 Hz
Control Panel	Electricity	10 A	120 VAC / 1 Ph / 60 Hz

*Purge gas to be oxygen free and not go to dew point at operating temperatures.

Customer Connections (Estimated, TBC by customer):

Service	Size	Type	Rating
Flare Gas	12"	RF	150#
Pilot Gas	1/2"	NPT	3000#

Equipment Description:

Self-Supported Flare Stack	The stack is mounted onto a customer supplied concrete foundation to secure the system and prevent it from blowing over in high winds.
Air Assisted Flare Tip (AF)	The flare tips use multi-jet technology to break up the exiting gas to allow for more fuel and air interaction to increase smokeless flaring. An air plenum is utilized to direct low pressure air into the combustion zone for turbulent mixing. Components located in the high heat zone will be made of 310SS or equivalent casting material. The tip will provide a VOC destruction efficiency of at least 98 wt%.
Velocity Seal	An integral purge reducing velocity seal is included to reduce the quantity of purge gas to prevent oxygen ingress through the flare tip at low rates.
Air Assist Blower (VFD Compatible)	For low pressure applications and/or heavy gas compositions, an air assist blower is required for smokeless operation. The blower utilizes ambient air to increase air and gas mixing in the combustion zone, which eliminates any smoke that may form in the flames. A VFD is recommended for fine tuning of the performance of the flare. VFD and flow or pressure transmitter for automated VFD control are by others.
HSLF Pilot w/ Type K Thermocouple	The premix pilot is proven to stay lit in hurricane force weather conditions. Testing has shown that a stable flame is present even in wind speeds greater than 150 mph in addition to rainfall of over 10 inches per hour. The pilot will be equipped with a Type K thermocouple for continuous monitoring of the pilot status. The pilot also meets or exceeds API 537 design requirements.
Retractable Pilot Components	For ease of service, instead of retracting the entire pilot, only the components that may need service are made retractable. This ensures that the location of the pilot with relation to the flare tip is maintained, ensuring proper ignition every time. The ignition probe and thermocouple are the only components that potentially require regular maintenance. Both components will be retractable so that maintenance can be performed without needing a shutdown of the flare or any special equipment.
Automatic Ignition/Monitoring Panel (Z-Purge)	The automatic pilot ignition and monitoring panel will continuously monitor the pilot and attempt to relight if a pilot failure signal is received. The control panel will require customer supplied electricity and also be skid mounted. A Z-Purge is included for installation in a Cl 1 Div 2 area.
Group D Deflagration Arrester	Due to potential for having combustible levels of oxygen in the flare gases, an arrester is recommended to ensure that any flashback from the flare tip is stopped before it can enter into the upstream piping system.

Section 8

Map(s)

A map such as a 7.5 minute topographic quadrangle showing the exact location of the source. The map shall also include the following:

The UTM or Longitudinal coordinate system on both axes	An indicator showing which direction is north
A minimum radius around the plant of 0.8km (0.5 miles)	Access and haul roads
Topographic features of the area	Facility property boundaries
The name of the map	The area which will be restricted to public access
A graphical scale	

A site location map and an aerial image with a 0.5 mile boundary and access roads are provided.

Section 9
Proof of Public Notice

Section 9

Proof of Public Notice

(for NSR applications submitting under 20.2.72 or 20.2.74 NMAC)
(This proof is required by: 20.2.72.203.A.14 NMAC "Documentary Proof of applicant's public notice")

☑ **I have read the AQB "Guidelines for Public Notification for Air Quality Permit Applications"**
This document provides detailed instructions about public notice requirements for various permitting actions. It also provides public notice examples and certification forms. Material mistakes in the public notice will require a re-notice before issuance of the permit.

Unless otherwise allowed elsewhere in this document, the following items document proof of the applicant's Public Notification. Please include this page in your proof of public notice submittal with checkmarks indicating which documents are being submitted with the application.

New Permit and **Significant Permit Revision** public notices must include all items in this list.

Technical Revision public notices require only items 1, 5, 9, and 10.

Per the Guidelines for Public Notification document mentioned above, include:

1. ☑ A copy of the certified letter receipts with post marks (20.2.72.203.B NMAC)
2. ☑ A list of the places where the public notice has been posted in at least four publicly accessible and conspicuous places, including the proposed or existing facility entrance. (e.g: post office, library, grocery, etc.)
3. ☑ A copy of the property tax record (20.2.72.203.B NMAC).
4. ☑ A sample of the letters sent to the owners of record.
5. ☑ A sample of the letters sent to counties, municipalities, and Indian tribes.
6. ☑ A sample of the public notice posted and a verification of the local postings.
7. ☑ A table of the noticed citizens, counties, municipalities and tribes and to whom the notices were sent in each group.
8. ☑ A copy of the public service announcement (PSA) sent to a local radio station and documentary proof of submittal.
9. ☑ A copy of the classified or legal ad including the page header (date and newspaper title) or its affidavit of publication stating the ad date, and a copy of the ad. When appropriate, this ad shall be printed in both English and Spanish.
10. ☑ A copy of the display ad including the page header (date and newspaper title) or its affidavit of publication stating the ad date, and a copy of the ad. When appropriate, this ad shall be printed in both English and Spanish.
11. ☑ A map with a graphic scale showing the facility boundary and the surrounding area in which owners of record were notified by mail. This is necessary for verification that the correct facility boundary was used in determining distance for notifying land owners of record. **SEE NOTE BELOW**

Proof of posting in the newspaper is included.

Hazard: Pumps manufactured between October 2017 and February 2019 dates may overheat and create the risk of fire.

Utilitech pedestal sump pumps sold between May 2018 and

NOTICE

ConocoPhillips Company announces its application to the New Mexico Environment Department for an air quality permit for the modification of the Zia Hills Central Facility. The expected date of application submittal to the Air Quality Bureau is December 30, 2020. The proposed modification consists of increasing production and the use of additional dehydration equipment.

The exact location for the Zia Hills Central Facility, will be at latitude 32 deg, 01 min, 19 sec and longitude -103 deg, 42 min, 45 sec. The approximate location of this facility is 24.9 miles southeast of Malaga in Lea County.

The estimated maximum quantities of any regulated air contaminants will be as follows in pound per hour (pph) and tons per year (tpy). These reported emissions could change slightly during the course of the Department's review:

Pollutant:	Pounds per hour	Tons per year
PM $_{10}$	11	6
PM $_{2.5}$	11	6
Sulfur Dioxide (SO_2)	2	6
Nitrogen Oxides (NO_x)	230	6
Carbon Monoxide (CO)	440	60
Volatile Organic Compounds (VOC)	750	55
Total sum of all Hazardous Air Pollutants (HAPs)	17	110
Toxic Air Pollutant (TAP)	n/a	14
Green House Gas Emissions as Total CO$_2$e	n/a	n/a
		80,000

The standard and maximum operating schedules of the facility will be 24 hours per day, 7 days a week and a maximum of 52 weeks per year. The owner and/or operator of the Facility is: The owner and/or operator of the Facility is: ConocoPhillips Company; 935 N. Eldridge Parkway; Houston, TX 77079.

If you have any comments about the construction or operation of this facility, and you want your comments to be made as part of the permit review process, you must submit your comments in writing to this address: Permit Programs Manager; New Mexico Environment Department; Air Quality Bureau; 525 Camino de los Marquez, Suite 1; Santa Fe, New Mexico; 87505-1816; (505) 476-4300; 1 800 224-7009; https://www.env.nm.gov/aqb/permit/aqb_draft_permits.html. Other comments and questions may be submitted verbally.

With your comments, please refer to the company name and facility name, or send a copy of this notice along with your comments. This information is necessary since the Department may have not yet received the permit application. Please include a legible return mailing address. Once the Department has completed its preliminary review of the application and its air quality impacts, the Department's notice will be published in the legal section of a newspaper circulated near the facility location.

Attention
Este es un aviso de la oficina de Calidad del Aire del Departamento del Medio Ambiente de Nuevo México, acerca de las emisiones producidas por un establecimiento en esta área. Si usted desea información en español, por favor comuníquese con esa oficina al teléfono 505-476-5557.

Notice of Non-Discrimination
NMED does not discriminate on the basis of race, color, national origin, disability, age or sex in the administration of its programs or activities, as required by applicable laws and regulations. NMED is responsible for coordination of compliance efforts and receipt of inquiries concerning non-discrimination requirements implemented by 40 C.F.R. Part 7, including Title VI of the Civil Rights Act of 1964, as amended; Section 504 of the Rehabilitation Act of 1973; the Age Discrimination Act of 1975; Title IX of the Education Amendments of 1972; and Section 13 of the Federal Water Pollution Control Act Amendments of 1972. If you believe that you have been discriminated against with respect to a NMED program or activity, you may contact the Civil Rights Coordinator, NMED, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, NM 87502; (505) 827-2855; nd.coordinator@state.nm.us. NOTICE

ConocoPhillips Company announces its application to the New Mexico Environment Department for an air quality permit for the modification of the Zia Hills Central Facility. The expected date of application subnittal to the Air Quality Bureau is December 30, 2020. The proposed modification consists of increasing production and the use of additional dehydration equipment.

The exact location for the Zia Hills Central Facility, will be at latitude 32 deg, 01 min, 19 sec and longitude -103 deg, 42 min, 45 sec. The approximate location of this facility is 24.9 miles southeast of Malaga in Lea County.

The estimated maximum quantities of any regulated air contaminants will be as follows in pound per hour (pph) and tons per year (tpy). These reported emissions could change slightly during the course of the Department's review:

Pollutant:	Pounds per hour	Tons per year
PM_{10}	11	6
$PM_{2.5}$	11	6
Sulfur Dioxide (SO_2)	2	6
Nitrogen Oxides (NO_x)	230	60
Carbon Monoxide (CO)	440	55
Volatile Organic Compounds (VOC)	750	110
Total sum of all Hazardous Air Pollutants (HAPs)	17	14
Toxic Air Pollutant (TAP)	n/a	n/a
Green House Gas Emissions as Total CO_2e	n/a	80,000

The standard and maximum operating schedules of the facility will be 24 hours per day, 7 days a week and a maximum of 52 weeks per year. The owner and/or operator of the Facility is: The owner and/or operator of the Facility is: ConocoPhillips Company; 935 N. Eldridge Parkway; Houston, TX 77079.

If you have any comments about the construction or operation of this facility, and you want your comments to be made as part of the permit review process, you must submit your comments in writing to this address: Permit Programs Manager; New Mexico Environment Department; Air Quality Bureau; 525 Camino de los Marquez, Suite 1; Santa Fe, New Mexico; 87505-1816; (505) 476-4300; 1 800 224-7009; https://www.env.nm.gov/aqb/permit/aqb_draft_permits.html. Other comments and questions may be submitted verbally.

With your comments, please refer to the company name and facility name, or send a copy of this notice along with your comments. FIFA provides breakdown of 2023 expanded Women's World Cup field

ZURICH (AP) — CONCACAF will have four direct berths for the expanded Women's World Cup in 2023, and two more teams from the region will have a chance to join them via a 10-team playoff tournament.

The United States, Canada, and Jamaica represented the confederation covering North and Central America and the Caribbean at the 24-team World Cup in France last year. A fourth CONCACAF country, Panama, had a chance to qualify, but lost 5-1 to Argentina on aggregate in a home-and-away CONCACAF-CONMEBOL playoff.

FIFA released the breakdown for the 32-team women's tournament on Thursday. Europe (UEFA) will get 11 direct slots, while Asia (AFC) gets six and Africa (CAF), like CONCACAF, gets four. South America (CONMEBOL) gets three and Oceania (OFC) one.

Host Australia and New Zealand automatically qualify, with their slots taken directly from the quotas allocated to their confederations.

The 2019 World Cup field featured nine teams from Europe, including host France, five from Asia, three from Africa and CONCACAF, two from South America, one from Oceania and the winner of the CONCACAF-CONMEBOL playoff.

The first Women's World Cup, held in 1991 in China, had 12 participants.

Four teams will be seeded in the 2023 playoff tournament, based on the latest FIFA world rankings prior to the draw, with a maximum of one seeded team per confederation. The teams will be divided into three pools — two of three countries and one of four — with sides from the same confederation kept apart.

The playoff tournament will serve as a test event in Australia and New Zealand, with both hosts taking part in friendly matches against the teams in Group 1 and Group 2, ensuring all teams play two matches during the competition.

In other tournament news, FIFA has canceled the Under-17 and Under-20 World Cups scheduled for next year due to the pandemic. The next editions are now due to be staged in 2023, with Indonesia still hosting the U20s and Peru the U17s.

FIFA says "the COVID-19 pandemic continues to present challenges for the hosting of international sporting events and to have a restrictive effect on international travel."

Boise St. upends New Mexico 89-52

BOISE, Idaho (AP) — Max Rice and Derrick Alston Jr. scored 22 points apiece as Boise State routed New Mexico 89-52 on Wednesday night.

The 22 points were a career high for Rice, who added seven rebounds. Alston Jr. also had six assists.

Marcus Shaver Jr. had 13 points for Boise State (6-1, 2-0 Mountain West Conference), which earned its sixth straight victory. Emmanuel Akot added six assists.

Saquan Singleton had eight points for the Lobos (3-2, 0-2).

The Broncos improve to 2-0 against the Lobos this season. Boise State defeated New Mexico 77-53 last Monday.

Harden must quarantine until Friday; could play in opener

NEW YORK (AP) — James Harden will be in quarantine until Friday, meaning the Houston Rockets star could be eligible to play Saturday when his team is to finally open its season in Portland.

The Rockets were scheduled to play Wednesday against Oklahoma City, a game postponed for a variety of coronavirus issues. Among them was Harden declared unavailable to play after the NBA determined he violated the league's health and safety protocols.

Under NBA rules, a team needs eight healthy players to play, and the Rockets were one short. They have 16 players on the roster, and nine were out: One was injured; three returned tests that were either positive or inconclusive for coronavirus; four other players are quarantined as part of the virus protocols; and Harden was ineligible.

The NBA's medical staff determined Harden needed to quarantine for four days, which started Tuesday, before he can return to practice, games or team activities. The league was still reviewing to see if any other quarantine decisions were needed for other Rockets players.

Harden was fined $50,000 on Wednesday by the NBA, which said he violated protocols. The league prohibits attending indoor social gatherings of 15 or more people or entering bars, lounges, clubs or similar establishments.

Video of the disgruntled star surfaced on social media, where he was shown without a mask at a crowded party in a private event space Monday night. Harden, in a since-deleted Instagram post, explained why he was at the event.

He wrote: "One thing after another. I went to show love to my homegirl at her event (not a strip club) because she is becoming a boss and putting her people in a position of success and now it's a problem. Everyday it's something different. No matter how many times people try to drag my name under you can't. The real people always end up on top."

AP PHOTO

Moses Swaibu poses for a photograph during an interview with the Associated Press in London, Dec. 7. A former professional soccer play who was jailed in 2015 for match fixing allegations fears the financial crisis in the game caused by the coronavirus could make players more vulnerable to taking bribes.

Player jailed in match-fixing plot warns PL stars of dangers

LONDON (AP) — When Moses Swaibu stands in front of future Premier League players, warning of the dangers of becoming embroiled in match-fixing, he is speaking from experience.

"You do not want to end up in my position, going to prison," Swaibu recalls telling some of the game's most famous players in talks at training grounds, "sitting in the cell with someone you once looked up to that played in the Premier League, eating tinned food and a packet of crisps and someone opening your door, telling you what you should and shouldn't do for 24 hours.

"And that's when I would say the penny drops. But then I'll turn around and say that's the worst-case scenario. Best-case scenario is you're going to go play in the Premier League and everyone's happy."

Swaibu's educational talks at academies with future stars are about ensuring the current generation of players do not make the same mistakes as him. They are lessons in how a series of fateful mistakes ended up five years ago with him being convicted of conspiracy to bribe lower-league players in England and jailed, along with Delroy Facey, who played as a striker in the Premier League for Bolton.

While the 31-year-old Swaibu began his career at Crystal Palace, he never got to play in the top division, drifting down the leagues before ending up in the fourth professional tier at Lincoln where he met Facey.

"Delroy had asked us to come down to his hotel room and he introduced us to these match-fixers that wanted us to throw a game," Swaibu said in an interview with The Associated Press. "They produced around 60,000 euros but at that time, everyone turned around and said, 'No, we're not going to do it.' But it was never reported (to the authorities)."

Swaibu regrets that.

It set Swaibu on a path that led to spending four months in jail after a judge denounced his and Facey's behavior as "like a cancer" that could have undermined the fairness of football. Investigators said they were part of a concerted attempt to build a network of corrupt players in Britain.

"They deliberately targeted lower leagues believing that because players earn less, they could be more susceptible to taking a bribe," National Crime Agency officer Adrian Hansford said.

Swaibu insists no games were ever manipulated but even just offering money to come to meetings with potential fixers is wrong — and he wants players to be aware of that.

"A lot of people probably couldn't understand what I was going through," Swaibu said, "that I was faced with a lack of payment, bad relationships with managers, traveling up and down the country, not knowing when I'm getting paid, not knowing how I'm going to pay my bills. There's so many variables that go into when you actually make any type of decision."

Fixers will target vulnerable players, not necessarily to manipulate the result but moments within matches.

"They may know you have a gambling problem or you like to put on bets, they may take your number, they may add you on Instagram, they may add you on social media," Swaibu said. "Then before you know it, you think you've made a friend, but that friend almost grooms you in a way where he may ask you potentially one day, 'Have you ever thought about getting a yellow or red card?'"

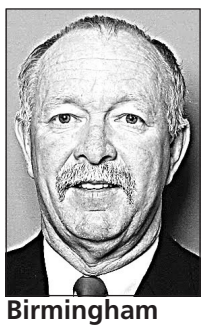
Birmingham

from PAGE 9

am. I am humbled by it. "I hope it inspires other people to have a great life, because I know if you have a great life, you have a servants heart."

Birmingham comes from a family who believes in helping others. Birmingham's father helped to build the first baseball park in town for local Little League teams.

"My parents taught me at a young age," he said. "(My dad) was president of the Kiwanis. He showed me community service. My mom did the same thing. My mom was big on the prenatal care board and taking care of children who were being born into tough situations. I have to give all the credit to my mom and dad."



Birmingham

Having been raised to around supporting one's community, Birmingham himself is big on community service and support.

"I did it at New Mexico Junior College and I did it when I was the coach at (Las Cruces) Mayfield High School," Birmingham said. "Up here (in Albuquerque), I do it with children's cancer and elementary schools. I play Santa, I go to the hospital and see children throughout the year."

One of the children Birmingham helped, Lio Ortega, hit close to home. Ortega's father Fred is one of Birmingham's former players. Fred played for Birmingham when he was the Thunderbirds' head coach and was on NMJC's 1995 team that produced the program's first Western Junior College Athletic Conference championship.

In 2017, Lio Ortega began battling a brain tumor. He was just three years old. He is just one of the children who has been helped by Birmingham.

"By the time he was four, we let him bat in his first NCAA Division I game," Birmingham said of a Mountain West Conference game in 2018. "We called the NCAA and they said you can do it, and this is how you do it. We were playing Air Force and Lio lived in Colorado Springs and Air Force participated. We started the game with Lio batting as the first batter. He hit the ball back to the pitcher and he ran to first and the pitcher threw the ball down the corner and (Lio) got an inside the park home run.

"It was on national TV," Birmingham continued. "It was on Good Morning America. It was on ESPN. It blew up and that was what we wanted. People began giving donations to help the family."

Birmingham believes health care is so expensive that when someone gets sick or a disease, like Lio, it destroys a family, not only mentally, but also financially.

"Not only do they have a child dying, but they are about to go broke," Birmingham said. "Those two things should not go together. That is one of the reasons I am involved with what I am involved with."

Today Lio is not only still alive, but he is thriving.

"He is totally recovered and a healthy boy," Birmingham said. "He went 3-for-4 in his last game. His hair is all grown out. He is healthy as heck and cancer research saved him."

Birmingham has been doing this kind of work long before getting involved with Keeper of the Game. Back when he was in Hobbs, Birmingham was there to help Josh Puckett.

"Josh Puckett was in a wheel chair and was not mobile at all," Birmingham said. "He was going to Highland Junior High and he wanted to interview me on his sports show that a teacher let him have. He did it on the intercom at like 9 o'clock in the morning in between classes. He called me and asked me if I would be on with him. So I drove over and we did it. I didn't know he was in the situation he was in.

"So, we made him the broadcaster for T-Bird baseball," Birmingham continued. "He taped it and we played it later on the radio station. He became part of the team."

Birmingham believes one should use his or her platform to help people.

"You can help people who feel like they are on an island and they have very difficult circumstances," he said. "I believe if the village gets around them, then they can overcome incredible odds and he did. Josh walks now. He got married and has a child. He is in great shape. I hope we had a little part of that."

Being involved the way he normally is has not been easy this year, thanks to the COVID-19 pandemic. One of Birmingham's events involves the Lobos coach playing Santa Claus for children of cancer at a big Christmas dinner every year. Unfortunately that dinner did not take place. However, he still found a way to get baseball gloves into the hands of young children, albeit through the hands of others in a more protective and safer way.

The award is supposed to be presented to Birmingham during a 2021 Lobos game. Birmingham believes there will be a season, just a condensed one. UNM is slated to play 47 games, all on the weekends, when the upcoming baseball season starts this spring.

"We will go play, come home and get off the plane or bus, take a (COVID-19) test until we get the results, and make adjustments from there," Birmingham said. "Whoever is left will be able to play the next one."

NFL honors Mississippi man freed after 22 years in prison

JACKSON, Miss. (AP) — The NFL says it is honoring Curtis Flowers, a Black man from Mississippi who was imprisoned more than 22 years and was freed in late 2019, months after the U.S. Supreme Court threw out the last of his several convictions in a quadruple murder case.

The NFL says players are wearing helmet decals this season "to honor victims of systemic racism, victims of police misconduct and social justice heroes."

The league said Wednesday on Twitter that Flowers is among those being recognized.

"I am so blessed, humbled, and thankful that the NFL and Roc Nation chose to include me to be honored in today's movement for social change and justice," Flowers, who has maintained that he was wrongly convicted, said in a statement in the NFL tweet.

Roc Nation is an an entertainment company founded by Jay-Z. Its philanthropic arm, Team Roc, has been working on social justice issues, including pushing for better living conditions for inmates in Mississippi prisons.

"I am a life-long lover of the NFL and the work this organization does in our society," Flowers said. "Thanks to my Lord, Jesus Christ, my family, friends, supporters, my dream legal team for this opportunity. I continually think about all of the men and women who are still unjustly incarcerated."

Mississippi Attorney General Lynn Fitch said in September that she would not try Flowers a seventh time in the 1996 slayings and a robbery that took place at a furniture store in Winona, Mississippi. He had been in custody since 1997.

Flowers was convicted four times: twice for individual slayings and twice for all four killings. Two other trials involving all four deaths ended in mistrials. Each of Flowers' convictions was overturned.

In June 2019, the U.S. Supreme Court tossed out the conviction and death sentence from Flowers' sixth trial, which took place in 2010. Justices said prosecutors showed an unconstitutional pattern of excluding Black jurors from Flowers' trials.

The Supreme Court ruling came after American Public Media's "In the Dark" investigated the case. The podcast recorded jailhouse informant Odell Hallmon in 2017 and 2018 recanting his testimony that Flowers had confessed to him.

The first six trials were prosecuted by the local district attorney. Flowers was still facing the 1997 indictments in December 2019 when a judge agreed to release him on bond. The district attorney handed the case to the attorney general, and her staff spent months reviewing it before deciding not to go forward because of a lack of credible witnesses.

The four people shot to death on July 16, 1996, in Tardy Furniture were store owner Bertha Tardy, 59, and three employees: 45-year-old Carmen Rigby, 42-year-old Robert Golden and 16-year-old Derrick "Bobo" Stewart.

and Keenan McCardell, and that's without a consistently solid quarterback situation.

He caught passes from Chad Henne and Blake Bortles in Jacksonville before relocating to an equally unstable QB situation involving Mitchell Trubisky, Chase Daniel and Nick Foles.

"It helped me grow as a player a lot," Robinson said of his early years. "I think I went through just some adversity. I wouldn't say a lot of adversity, but going through some adversity as a young player in the league I think helped mold who I am today and how I approach things."

Brantley Lake: In accordance with the Public Health Order, effective Dec. 3, NM State Parks reopened to New Mexico residents for day-use only. Please check the State Parks' website for more information.

Carlsbad Municipal Lake: Fishing for trout was good using white PowerBait.

Chaparral Park Lake: We had no reports from anglers this week.

Corona Pond: Fishing for trout was good using earthworms.

Eunice Lake: We had no reports from anglers this week.

Green Meadow Lake: Fishing for trout was good using homemade dough bait and cheese PowerBait.

Greene Acres Lake: We had no reports from anglers this week.

Grindstone Reservoir: Fishing for trout was good using salmon peach PowerBait and marshmallows. Anglers reported the lake was limited to residence and to check openings before you go.

Jal Lake: We had no reports from anglers this week.

Lake Van: Fishing for trout was good using spoons and dough bait.

Oasis Park Lake: In accordance with the Public Health Order, effective Dec. 3, NM State Parks reopened to New Mexico residents for day-use only. Please check the State Parks' website for more information. Fishing for trout was good using Kastmaster spoons.

Pecos River: Stream flow below Sumner Lake Monday morning was 21.0 cfs.

Perch Lake: Fishing for trout was good using salmon peach PowerBait.

Ruidoso River: Stream flow Monday morning at Hollywood was 4.31 cfs.

Santa Rosa Lake: In accordance with the Public Health Order, effective Dec. 3, NM State Parks reopened to New Mexico residents for day-use only. Please check the State Parks' website for more information.

Sumner Lake: In accordance with the Public Health Order, effective Dec. 3, NM State Parks reopened to New Mexico residents for day-use only. Please check the State Parks' website for more information.

College

from PAGE 9

play in person, but state restrictions and conference protocols aimed at stopping the virus spread have prevented so many of these visits. Instead of traveling to Minnesota, Curry's mother, sister and grandmother will watch from their home in Little Rock, Arkansas.

"He knows I'm always watching, but it's different when you're there in person," Phipps said. "They may be adult-like and have grown-men bodies and all that, but they're still kids, honestly. Eric, today, if something goes wrong, he's still going to call me because I need to fix it for him."

Programs across the country have attempted to ramp up mental health support at a time when the potential for anxiety or loneliness has spiked for players along with everyone else. There is extra stress, too, each time they arrive for a COVID-19 test, realizing a positive result will force them out of action and away from their surrogate family.

"The emotional and mental fatigue and exhaustion and trauma, even though that may not be the appropriate word, it's much more real than you imagine," Texas A&M coach Buzz Williams said.

Duke coach Mike Krzyzewski was so concerned earlier this month that he canceled two nonconference games so team members could be home for Christmas.

"They want to go to a football game, and they want to hang out with the regular students. They have none of that," Rutgers coach Steve Pikiell said. "So their normal has completely changed, except for when they get in the gym."

Michigan State players, who ate their Thanksgiving meal while on a Zoom call with their families to keep spirits up on the holiday, had a recruiting room at the Breslin Center temporarily transformed into an arcade and lounge so they could hang out somewhere beside their apartments.

"Forty years ago, I don't know if I could have done what they're doing," coach Tom Izzo said.

Minnesota coach Richard Pitino recently described the vibe akin to the team being on a 15-hour bus trip, only able to see each other.

"We at least get to go home to our families, but these guys are very, very isolated, and it is a huge challenge from a mental health standpoint," Pitino said. "You can't take them bowling. You can't take them to a movie theater. So you've got to be as empathetic as possible."

Resourceful, too.

"As you get older, you realize how to get release from stress in life, whether it's go for a walk, work out and exercise, a glass of wine at night, read a book, whatever it is," Pitino said. "I don't know if young people quite know that, so we're trying to educate them as much as we can."

The bouncing balls and squeaking sneakers are as good of an antidote as there is. Wisconsin coach Greg Gard called playing games "a big mental health bonus" and facing a tough opponent helps bring focus.

The freshmen, like Gophers guard Jamal Mashburn Jr., have had the biggest adjustments.

"It's definitely a struggle. I'm used to seeing my dad who's my best friend, my hero. It's hard being away from him," he said of the elder Mashburn, the former Kentucky and NBA standout. "He's also my trainer. He's my everything. So it's hard, but I know he's always going to be there. He calls me every day."

Kids being kids, though, they're doing their best to live in the moment.

"I just know I've got to take care of business here. Home is always going to be there," Mashburn said. "That's never going to go anywhere."

NFL

from PAGE 9

between the league and the club on that. I am disappointed.

"I know if the game was on Sunday I would be there because the timeframe would be up. And really, all these coaches would be able to be there. So, I think that's the most disappointing part. But we've got to go with what they're telling us."

The Browns may have to try and secure a playoff spot — their first since 2002 — on Sunday in New York without starting rookie left tackle Jedrick Wills, who was placed on the COVID-19 list Thursday.

It's the latest issue on Cleveland's line, which is already missing starting right guard Wyatt Teller (ankle) and lost the versatile Chris Hubbard after he suffered a season-ending knee injury against the New York Giants. Rookie Nick Harris is filling in for Teller.

Browns first-year coach Kevin Stefanski said "there's a possibility" when asked if Wills will play this week against the Jets. A first-round pick from Alabama, Wills had close contact with an infected person outside Cleveland's facility. But as long as he continues to test negative, he'll be able to be activated and play.

The Browns (10-4) can clinch a postseason berth with a win and losses by either Baltimore, Indianapolis or Miami.

Section 10
Wirtten Description of Operations

Section 10

Written Description of the Routine Operations of the Facility

---

A written description of the routine operations of the facility. Include a description of how each piece of equipment will be operated, how controls will be used, and the fate of both the products and waste generated. For modifications and/or revisions, explain how the changes will affect the existing process. In a separate paragraph describe the major process bottlenecks that limit production. The purpose of this description is to provide sufficient information about plant operations for the permit writer to determine appropriate emission sources.

Gas from well sites enter the facility through a slug catcher. The site uses natural gas engines to compress the gas for sales and gas lift, including one Caterpillar 3516J and six (6) Caterpillar 3606A4 engines (ENG1-ENG3, ENG5-ENG8). The Caterpillar engines are equipped with oxidation catalysts to reduce CO, VOC, and formaldehyde emissions. During compressor downtime or during an emergency, a flare (FL1) is used to flare high pressure gas. If two of the compressors go down, the facility is automatically shut in, limiting the volume of gas flared. Gas is dehydrated using triethylene glycol dehydration units (DEHY1-DEHY4). The glycol still vent vapors are routed to condensers. Flash tank and uncondensed vapors are burned in the glycol regenerator burners (RB1-RB4). Dehydrated gas is used for gas lift or transferred to a gas sales line.

Liquids generated from the slug catcher and compressor dumps are routed to a line heater (LH1), then to an overhead gas scrubber (OHS1). These units are used to flash the liquids and route gas to sales via by a redundant vapor recovery system (VRU1-VRU2). Water is routed to a water degassing vessel (WDGV1) and oil is routed to an oil tank (OT5) prior to being piped to the stabilizers. Vapors from both are carried to sales via VRU1-VRU2.

Oil from well sites enters the facility through inlet separators and into three (3) stabilizers (STAB1-STAB3). Gas from the stabilizer vessels is mixed with the gas from the inlet separator and routed to the inlet of the compressors. The facility is designed such that the stabilizer and inlet separator gas always flows to sales. Oil then flows to four (4) sales tanks (OT1-OT4) controlled by a VRU1-VRU2. During VRU downtime, these streams are routed a redundant flare system (FL2-FL3). Oil is shipped offsite via pipeline LACT.

Water from well sites is routed to WDGV1 then to two (2) gun barrel separators (GB1- GB2), which skim any remaining oil from the incoming water. The water then flows to produced water tanks (WT1-WT8) for temporary storage prior to being piped offsite. Any skimmed oil is routed to two slop oil tanks (ST1-ST2). Slop oil is routed back to the stabilizer vessels. Water degas vessel, gun barrel, and slop tank vapors are controlled using VRU1-VRU2, with vapors routed to FL2-FL3 during VRU downtime. Water is piped offsite.

Section 11
Source Determination

Section 11
Source Determination

Source submitting under 20.2.70, 20.2.72, 20.2.73, and 20.2.74 NMAC

Sources applying for a construction permit, PSD permit, or operating permit shall evaluate surrounding and/or associated sources (including those sources directly connected to this source for business reasons) and complete this section. Responses to the following questions shall be consistent with the Air Quality Bureau's permitting guidance, Single Source Determination Guidance, which may be found on the Applications Page in the Permitting Section of the Air Quality Bureau website.

Typically, buildings, structures, installations, or facilities that have the same SIC code, that are under common ownership or control, and that are contiguous or adjacent constitute a single stationary source for 20.2.70, 20.2.72, 20.2.73, and 20.2.74 NMAC applicability purposes. Submission of your analysis of these factors in support of the responses below is optional, unless requested by NMED.

A. Identify the emission sources evaluated in this section (list and describe)**:**
See Table 2A.

B. Apply the 3 criteria for determining a single source:

SIC Code: Surrounding or associated sources belong to the same 2-digit industrial grouping (2-digit SIC code) as this facility, OR surrounding or associated sources that belong to different 2-digit SIC codes are support facilities for this source.

☑ **Yes** ☐ **No**

Common Ownership or Control: Surrounding or associated sources are under common ownership or control as this source.

☑ **Yes** ☐ **No**

Contiguous or Adjacent: Surrounding or associated sources are contiguous or adjacent with this source.

☑ **Yes** ☐ **No**

C. Make a determination:

☑ The source, as described in this application, constitutes the entire source for 20.2.70, 20.2.72, 20.2.73, or 20.2.74 NMAC applicability purposes. If in "A" above you evaluated only the source that is the subject of this application, all "**YES**" boxes should be checked. If in "A" above you evaluated other sources as well, you must check **AT LEAST ONE** of the boxes "**NO**" to conclude that the source, as described in the application, is the entire source for 20.2.70, 20.2.72, 20.2.73, and 20.2.74 NMAC applicability purposes.

☐ The source, as described in this application, **does not** constitute the entire source for 20.2.70, 20.2.72, 20.2.73, or 20.2.74 NMAC applicability purposes (A permit may be issued for a portion of a source). The entire source consists of the following facilities or emissions sources (list and describe):

Section 12
PSD Determination

Section 12

Section 12.A
PSD Applicability Determination for All Sources

(Submitting under 20.2.72, 20.2.74 NMAC)

A PSD applicability determination for all sources. For sources applying for a significant permit revision, apply the applicable requirements of 20.2.74.AG and 20.2.74.200 NMAC and to determine whether this facility is a major or minor PSD source, and whether this modification is a major or a minor PSD modification. It may be helpful to refer to the procedures for Determining the Net Emissions Change at a Source as specified by Table A-5 (Page A.45) of the EPA New Source Review Workshop Manual to determine if the revision is subject to PSD review.

A. This facility is:

- ☑ **a minor PSD source before and after this modification (if so, delete C and D below).**
- ☐ **a major PSD source before this modification. This modification will make this a PSD minor source.**
- ☐ **an existing PSD Major Source that has never had a major modification requiring a BACT analysis.**
- ☐ **an existing PSD Major Source that has had a major modification requiring a BACT analysis**
- ☐ **a new PSD Major Source after this modification.**

Section 13
Determination of State & Federal Regulations

Section 13

Determination of State & Federal Air Quality Regulations

This section lists each state and federal air quality regulation that may apply to your facility and/or equipment that are stationary sources of regulated air pollutants.

Not all state and federal air quality regulations are included in this list. Go to the Code of Federal Regulations (CFR) or to the Air Quality Bureau's regulation page to see the full set of air quality regulations.

Required Information for Specific Equipment:
For regulations that apply to specific source types, in the 'Justification' column **provide any information needed to determine if the regulation does or does not apply**. **For example**, to determine if emissions standards at 40 CFR 60, Subpart IIII apply to your three identical stationary engines, we need to know the construction date as defined in that regulation; the manufacturer date; the date of reconstruction or modification, if any; if they are or are not fire pump engines; if they are or are not emergency engines as defined in that regulation; their site ratings; and the cylinder displacement.

Required Information for Regulations that Apply to the Entire Facility:
See instructions in the 'Justification' column for the information that is needed to determine if an 'Entire Facility' type of regulation applies (e.g. 20.2.70 or 20.2.73 NMAC).

Regulatory Citations for Regulations That Do Not, but Could Apply:
If there is a state or federal air quality regulation that does not apply, but you have a piece of equipment in a source category for which a regulation has been promulgated, you must **provide the low level regulatory citation showing why your piece of equipment is not subject to or exempt from the regulation. For example** if you have a stationary internal combustion engine that is not subject to 40 CFR 63, Subpart ZZZZ because it is an existing 2 stroke lean burn stationary RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, your citation would be 40 CFR 63.6590(b)(3)(i). **We don't want a discussion of every non-applicable regulation, but if it is possible a regulation could apply, explain why it does not. For example,** if your facility is a power plant, you do not need to include a citation to show that 40 CFR 60, Subpart OOO does not apply to your non-existent rock crusher.

Regulatory Citations for Emission Standards:
For each unit that is subject to an emission standard in a source specific regulation, such as 40 CFR 60, Subpart OOO or 40 CFR 63, Subpart HH, include the low level regulatory citation of that emission standard. Emission standards can be numerical emission limits, work practice standards, or other requirements such as maintenance. **Here are examples:** a glycol dehydrator is subject to the general standards at 63.764C(1)(i) through (iii); an engine is subject to 63.6601, Tables 2a and 2b; a crusher is subject to 60.672(b), Table 3 and all transfer points are subject to 60.672(e)(1)

Federally Enforceable Conditions:
All federal regulations are federally enforceable. All Air Quality Bureau State regulations are federally enforceable except for the following: affirmative defense portions at 20.2.7.6.B, 20.2.7.110(B)(15), 20.2.7.11 through 20.2.7.113, 20.2.7.115, and 20.2.7.116; 20.2.37; 20.2.42; 20.2.43; 20.2.62; 20.2.63; 20.2.86; 20.2.89; and 20.2.90 NMAC. Federally enforceable means that EPA can enforce the regulation as well as the Air Quality Bureau and federally enforceable regulations can count toward determining a facility's potential to emit (PTE) for the Title V, PSD, and nonattainment permit regulations.

INCLUDE ANY OTHER INFORMATION NEEDED TO COMPLETE AN APPLICABILITY DETERMINATION OR THAT IS RELEVENT TO YOUR FACILITY'S NOTICE OF INTENT OR PERMIT.

EPA Applicability Determination Index for 40 CFR 60, 61, 63, etc: http://cfpub.epa.gov/adi/

STATE REGU-LATIONS CITATION	**Title**	**Applies? Enter Yes or No**	**Unit(s) or Facility**	**JUSTIFICATION:** **(You may delete instructions or statements that do not apply in the justification column to shorten the document.)**
20.2.1 NMAC	General Provisions	Yes	Facility	General Provisions apply to Notice of Intent, Construction, and Title V permit applications.
20.2.3 NMAC	Ambient Air Quality Standards NMAAQS	Yes	Facility	If subject, this would normally apply to the entire facility. 20.2.3 NMAC is a State Implementation Plan (SIP) approved regulation that limits the maximum allowable concentration of, Sulfur Compounds, Carbon Monoxide and Nitrogen Dioxide. Title V applications, see exemption at 20.2.3.9 NMAC The TSP NM ambient air quality standard was repealed by the EIB effective November 30, 2018.
20.2.7 NMAC	Excess Emissions	Yes	Facility	If subject, this would normally apply to the entire facility. If your entire facility or individual pieces of equipment are subject to emissions limits in a permit or numerical emissions standards in a federal or state regulation, this applies. This would not apply to Notices of Intent since these are not permits.
20.2.23 NMAC	Fugitive Dust Control	No	N/A	This is not a mining facility.
20.2.33 NMAC	Gas Burning Equipment - Nitrogen Dioxide	No	N/A	None of the equipment has a rating greater than 100 MMBtu/hr.
20.2.34 NMAC	Oil Burning Equipment: NO_2	No	N/A	This facility has no oil burning equipment.
20.2.35 NMAC	Natural Gas Processing Plant – Sulfur	No	N/A	The facility is not a gas processing plant.
20.2.37 and 20.2.36 NMAC	Petroleum Processing Facilities and Petroleum Refineries	N/A	N/A	**These regulations were repealed by the Environmental Improvement Board. If you had equipment subject to 20.2.37 NMAC before the repeal, your combustion emission sources are now subject to 20.2.61 NMAC.**
20.2.38 NMAC	Hydrocarbon Storage Facility	Yes	OT1-OT4	The site is subject to 20.2.38.109 and 112. The site uses a VRU/Flare vent system to control emissions.
20.2.39 NMAC	Sulfur Recovery Plant - Sulfur	No	N/A	The facility does not operate a sulfur recovery plant.
20.2.61.109 NMAC	Smoke & Visible Emissions	Yes	FL1-FL3, STAB1-3, ENG1-3, ENG5-8, RB1-4, LH1	This regulation that limits opacity to 20% applies to Stationary Combustion Equipment, such as engines, boilers, heaters, and flares.
20.2.70 NMAC	Operating Permits	No	N/A	The facility is a not a major source of criteria pollutants.
20.2.71 NMAC	Operating Permit Fees	No	N/A	The facility is a not a major source of criteria pollutants. Fugitive VOC emissions are not included in the source determination.
20.2.72 NMAC	Construction Permits	Yes	Facility	This application is submitted in accordance with 20.2.72.
20.2.73 NMAC	NOI & Emissions Inventory Requirements	Yes	Facility	The site is subject to the emissions inventory requirements of 20.2.73 NMAC.

STATE REGU-LATIONS CITATION	**Title**	**Applies? Enter Yes or No**	**Unit(s) or Facility**	**JUSTIFICATION:** **(You may delete instructions or statements that do not apply in the justification column to shorten the document.)**
20.2.74 NMAC	Permits – Prevention of Significant Deterioration (PSD)	No	N/A	The facility is not a major PSD site.
20.2.75 NMAC	Construction Permit Fees	Yes	Facility	A permit fee is included with this application.
20.2.77 NMAC	New Source Performance	No	ENG1-3, ENG5-8	See regulatory discussion in Federal Regulations Citation section.
20.2.78 NMAC	Emission Standards for HAPS	No	N/A	The facility does not fit into any of the source categories.
20.2.79 NMAC	Permits – Nonattainment Areas	No	N/A	The facility is not located in a nonattainment area.
20.2.80 NMAC	Stack Heights	No	N/A	There are no stacks to which this regulation would apply.
20.2.82 NMAC	MACT Standards for source categories of HAPS	Yes	ENG1-3, ENG5-8,, DEHY1 - DEHY4	See regulatory discussion in Federal Regulations Citation section.

FEDERAL REGU-LATIONS CITATION	**Title**	**Applies? Enter Yes or No**	**Unit(s) or Facility**	**JUSTIFICATION:**
40 CFR 50	NAAQS	Yes	Facility	
NSPS 40 CFR 60, Subpart A	General Provisions	Yes	Units subject to 40 CFR 60	Applies if any other Subpart in 40 CFR 60 applies.
NSPS 40 CFR60.40a, Subpart Da	Subpart Da, Performance Standards for **Electric Utility Steam Generating Units**	No	N/A	The facility does not operate any electric utility steam generating units.
NSPS 40 CFR60.40b Subpart Db	**Electric Utility Steam Generating Units**	No	N/A	The facility does not operate any electric utility steam generating units.

FEDERAL REGU-LATIONS CITATION	Title	Applies? Enter Yes or No	Unit(s) or Facility	JUSTIFICATION:
40 CFR 60.40c, Subpart Dc	Small Industrial-Commercial-Institutional Steam Generating Units	No	N/A	The facility does not operate any affected sources.
NSPS 40 CFR 60, Subpart Ka	Tanks After May 18, 1978, and **Prior** to July 23, 1984	No	N/A	The facility does not operate any affected sources.
NSPS 40 CFR 60, Subpart Kb	Tanks Commenced **After** July 23, 1984	No	N/A	The hydrocarbons are stored prior to custody transfer.
NSPS 40 CFR 60.330 Subpart GG	**Stationary Gas Turbines**	No	N/A	The facility does not operate any affected sources.
NSPS 40 CFR 60, Subpart KKK	Leaks of VOC from **Onshore Gas Plants**	No	N/A	The facility does not operate any affected sources.
NSPS 40 CFR Part 60 Subpart LLL	**Onshore Natural Gas Processing**: SO_2 Emissions	No	N/A	The facility does not operate a sweetening unit.
NSPS 40 CFR Part 60 Subpart OOOO	O&G sites after August 23, 2011 and before September 18, 2015	No	N/A	The site post-dates Subpart OOOO.
NSPS 40 CFR Part 60 Subpart OOOOa	O&G Sites After September 18, 2015	Yes	FUG, ENG1-ENG3, ENG5-ENG8	The oil and water storage tanks were constructed after the applicability date of the rule; however emissions are limited by permit to less than 6 tpy. The site uses low-bleed pneumatic controllers. The compressors comply with the requirements of §60.5385a. The site is subject to leak monitoring requirements for fugitive components specified in §60.5397a.
NSPS 40 CFR 60 Subpart IIII	Stationary Compression Ignition Internal Combustion Engines	No	N/A	The facility does not operate any affected sources.
NSPS 40 CFR Part 60 Subpart JJJJ	Stationary Spark Ignition Internal Combustion Engines	Yes	ENG1-ENG3, ENG5-ENG8	The site is subject to the emissions limitations in Table 1.
NSPS 40 CFR 60 Subpart TTTT	Greenhouse Gas Emissions for Electric Generating Units	No	N/A	The facility does not operate any affected sources.
NSPS 40 CFR 60 Subpart UUUU	Greenhouse Gas Emissions and Compliance Times for Electric Utility Generating Units	No	N/A	The facility does not operate any affected sources.

FEDERAL REGU-LATIONS CITATION	Title	Applies? Enter Yes or No	Unit(s) or Facility	JUSTIFICATION:
NSPS 40 CFR 60, Subparts WWW, XXX, Cc, and Cf	Municipal Solid Waste (MSW) Landfills	No	N/A	The facility does not operate any affected sources.
NESHAP 40 CFR 61 Subpart A	General Provisions	See Below	See Below	See regulatory discussion below.
NESHAP 40 CFR 61 Subpart E	National Emission Standards for Mercury	No	N/A	The facility does not operate any affected sources.
NESHAP 40 CFR 61 Subpart V	Equipment Leaks (Fugitive Emission Sources)	No	N/A	The facility does not operate any affected sources.
MACT 40 CFR 63, Subpart A	General Provisions	Yes	Units Subject to 40 CFR 63	Applies if any other Subpart in 40 CFR 63 applies.
MACT 40 CFR 63.760 Subpart HH	**Oil and Natural Gas Production Facilities**	Yes	DEHY1-DEHY4	The site is an area sources of HAP and the dehydrators are subject to Subpart HH. Since benzene emissions are restricted to less than 1 tpy per a federally-enforceable permit; therefore, the unit is exempt from any requirements per §63.764(e)(1)(ii).
MACT 40 CFR 63 Subpart HHH		No	N/A	The facility does not operate any affected sources.
MACT 40 CFR 63 Subpart DDDDD	Major Industrial, Commercial, and Institutional Boilers & Process Heaters	No	N/A	The facility does not operate any affected sources.
MACT 40 CFR 63 Subpart UUUUU	Coal & Oil Fire Electric Utility Steam Generating Unit	No	N/A	The facility does not operate any affected sources.
MACT 40 CFR 63 Subpart ZZZZ	RICE MACT	Yes	ENG1-3, ENG5-8,	ENG1-3 and ENG5-8 comply with NSPS JJJJ to comply with NESHAP ZZZZ.
40 CFR 64	Compliance Assurance Monitoring	No	N/A	The facility is not a major source.
40 CFR 68	Chemical Accident Prevention	No	N/A	The facility does not store any chemicals above threshold quantities.
Title IV – Acid Rain 40 CFR 72	Acid Rain	No	N/A	The facility does not have any units subject to the Acid Rain regulations.

FEDERAL REGU-LATIONS CITATION	Title	Applies? Enter Yes or No	Unit(s) or Facility	JUSTIFICATION:
Title IV – Acid Rain 40 CFR 73	Sulfur Dioxide Allowance Emissions	No	N/A	The facility does not have any units subject to the Acid Rain regulations.
Title IV-Acid Rain 40 CFR 75	Continuous Emissions Monitoring	No	N/A	The facility does not have any units subject to the Acid Rain regulations.
Title IV – Acid Rain 40 CFR 76	Acid Rain Nitrogen Oxides Emission Reduction Program	No	N/A	The facility does not have any units subject to the Acid Rain regulations.
Title VI – 40 CFR 82	Protection of Stratospheric Ozone	No	N/A	The facility does not service, maintain, or repair equipment containing refrigerants.

Section 14
Operational Plan to Mitigate Emissions

Section 14

Operational Plan to Mitigate Emissions

(Submitting under 20.2.70, 20.2.72, 20.2.74 NMAC)

☐ **Title V Sources** (20.2.70 NMAC)**:** By checking this box and certifying this application the permittee certifies that it has developed an **Operational Plan to Mitigate Emissions During Startups, Shutdowns, and Emergencies** defining the measures to be taken to mitigate source emissions during startups, shutdowns, and emergencies as required by 20.2.70.300.D.5(f) and (g) NMAC. This plan shall be kept on site to be made available to the Department upon request. This plan should not be submitted with this application.

☑ **NSR** (20.2.72 NMAC)**, PSD** (20.2.74 NMAC) **& Nonattainment** (20.2.79 NMAC) **Sources:** By checking this box and certifying this application the permittee certifies that it has developed an **Operational Plan to Mitigate Source Emissions During Malfunction, Startup, or Shutdown** defining the measures to be taken to mitigate source emissions during malfunction, startup, or shutdown as required by 20.2.72.203.A.5 NMAC. This plan shall be kept on site to be made available to the Department upon request. This plan should not be submitted with this application.

☑ **Title V** (20.2.70 NMAC)**, NSR** (20.2.72 NMAC)**, PSD** (20.2.74 NMAC) **& Nonattainment** (20.2.79 NMAC) **Sources:** By checking this box and certifying this application the permittee certifies that it has established and implemented a Plan to Minimize Emissions During Routine or Predictable Startup, Shutdown, and Scheduled Maintenance through work practice standards and good air pollution control practices as required by 20.2.7.14.A and B NMAC. This plan shall be kept on site or at the nearest field office to be made available to the Department upon request. This plan should not be submitted with this application.

ConocoPhillips maintains written plans to ensure procedures are following during periods of startup, shutdown, and malfunction.

Section 15
Alternative Operating Scenarios

Section 15

Alternative Operating Scenarios

(Submitting under 20.2.70, 20.2.72, 20.2.74 NMAC)

Alternative Operating Scenarios: Provide all information required by the department to define alternative operating scenarios. This includes process, material and product changes; facility emissions information; air pollution control equipment requirements; any applicable requirements; monitoring, recordkeeping, and reporting requirements; and compliance certification requirements. Please ensure applicable Tables in this application are clearly marked to show alternative operating scenario.

Construction Scenarios: When a permit is modified authorizing new construction to an existing facility, NMED includes a condition to clearly address which permit condition(s) (from the previous permit and the new permit) govern during the interval between the date of issuance of the modification permit and the completion of construction of the modification(s). There are many possible variables that need to be addressed such as: Is simultaneous operation of the old and new units permitted and, if so for example, for how long and under what restraints? In general, these types of requirements will be addressed in Section A100 of the permit, but additional requirements may be added elsewhere. Look in A100 of our NSR and/or TV permit template for sample language dealing with these requirements. Find these permit templates at: https://www.env.nm.gov/aqb/permit/aqb_pol.html. Compliance with standards must be maintained during construction, which should not usually be a problem unless simultaneous operation of old and new equipment is requested.

In this section, under the bolded title "Construction Scenarios", specify any information necessary to write these conditions, such as: conservative-realistic estimated time for completion of construction of the various units, whether simultaneous operation of old and new units is being requested (and, if so, modeled), whether the old units will be removed or decommissioned, any PSD ramifications, any temporary limits requested during phased construction, whether any increase in emissions is being requested as SSM emissions or will instead be handled as a separate Construction Scenario (with corresponding emission limits and conditions, etc.

There are no alternate operating scenarios.

Section 16
Air Dispersion Modeling

Section 16

Air Dispersion Modeling

1) Minor Source Construction (20.2.72 NMAC) and Prevention of Significant Deterioration (PSD) (20.2.74 NMAC) ambient impact analysis (modeling): Provide an ambient impact analysis as required at 20.2.72.203.A(4) and/or 20.2.74.303 NMAC and as outlined in the Air Quality Bureau's Dispersion Modeling Guidelines found on the Planning Section's modeling website. If air dispersion modeling has been waived for one or more pollutants, attach the AQB Modeling Section modeling waiver approval documentation.
2) SSM Modeling: Applicants must conduct dispersion modeling for the total short term emissions during routine or predictable startup, shutdown, or maintenance (SSM) using realistic worst case scenarios following guidance from the Air Quality Bureau's dispersion modeling section. Refer to "Guidance for Submittal of Startup, Shutdown, Maintenance Emissions in Permit Applications (http://www.env.nm.gov/aqb/permit/app_form.html) for more detailed instructions on SSM emissions modeling requirements.
3) Title V (20.2.70 NMAC) ambient impact analysis: Title V applications must specify the construction permit and/or Title V Permit number(s) for which air quality dispersion modeling was last approved. Facilities that have only a Title V permit, such as landfills and air curtain incinerators, are subject to the same modeling required for preconstruction permits required by 20.2.72 and 20.2.74 NMAC.

What is the purpose of this application?	Enter an X for each purpose that applies
New PSD major source or PSD major modification (20.2.74 NMAC). See #1 above.	
New Minor Source or significant permit revision under 20.2.72 NMAC (20.2.72.219.D NMAC). See #1 above. **Note:** Neither modeling nor a modeling waiver is required for VOC emissions.	X
Reporting existing pollutants that were not previously reported.	
Reporting existing pollutants where the ambient impact is being addressed for the first time.	
Title V application (new, renewal, significant, or minor modification. 20.2.70 NMAC). See #3 above.	
Relocation (20.2.72.202.B.4 or 72.202.D.3.c NMAC)	
Minor Source Technical Permit Revision 20.2.72.219.B.1.d.vi NMAC for like-kind unit replacements.	
Other: i.e. SSM modeling. See #2 above.	
This application does not require modeling since this is a No Permit Required (NPR) application.	
This application does not require modeling since this is a Notice of Intent (NOI) application (20.2.73 NMAC).	
This application does not require modeling according to 20.2.70.7.E(11), 20.2.72.203.A(4), 20.2.74.303, 20.2.79.109.D NMAC and in accordance with the Air Quality Bureau's Modeling Guidelines.	

Check each box that applies:

☐ See attached, approved modeling **waiver for all** pollutants from the facility.
☐ See attached, approved modeling **waiver for some** pollutants from the facility.
☐ Attached in Universal Application Form 4 (UA4) is a **modeling report for all** pollutants from the facility.
☑ Attached in UA4 is a **modeling report for some** pollutants from the facility.
☐ No modeling is required.

Section 17
Compliance Test History

Section 17

Compliance Test History

(Submitting under 20.2.70, 20.2.72, 20.2.74 NMAC)

To show compliance with existing NSR permits conditions, you must submit a compliance test history. The table below provides an example.

Compliance Test History Table

Unit No.	Test Description	Test Date
412951	NSPS JJJJ Test	12/03/2019
811355	NSPS JJJJ Test	12/03/2019
811251	NSPS JJJJ Test	05/15/2019
811252	NSPS JJJJ Test	06/06/2019
811309	NSPS JJJJ Test	01/07/2020
811355	NSPS JJJJ Test	01/07/2020
811356	NSPS JJJJ Test	03/03/2020
811357	NSPS JJJJ Test	03/03/2020

* Tests indicated compliance with NSPS JJJJ limitations.

Section 18
Addendum for Streamline Applications

Section 18

Addendum for Streamline Applications

Do not print this section unless this is a streamline application.

Streamline Applications do not require a complete application. Submit Sections 1-A, 1-B, 1-D, 1-F, 1-G, 2-A, 2-C thru L, Sections 3 thru 8, Section 13, Section 18, Section 22, and Section 23 (Certification). Other sections may be required at the discretion of the Department. 20.2.72.202 NMAC Exemptions do not apply to Streamline sources. 20.2.72.219 NMAC revisions and modifications do not apply to Streamline sources, thus 20.2.72.219 type actions require a complete new application submittal. Please do not print sections of a streamline application that are not required.

This is not a Streamline application.

Section 19
Requirements for Title V Program

Section 19

Requirements for Title V Program

Do not print this section unless this is a Title V application.

Who Must Use this Attachment:

* Any major source as defined in 20.2.70 NMAC.
* Any source, including an area source, subject to a standard or other requirement promulgated under Section 111 - Standards of Performance for New Stationary Sources, or Section 112 Hazardous Air Pollutants, of the 1990 federal Clean Air Act ("federal Act"). Non-major sources subject to Sections 111 or 112 of the federal Act are exempt from the obligation to obtain an 20.2.70 NMAC operating permit until such time that the EPA Administrator completes rulemakings that require such sources to obtain operating permits. In addition, sources that would be required to obtain an operating permit solely because they are subject to regulations or requirements under Section 112(r) of the federal Act are exempt from the requirement to obtain an Operating Permit.
* Any Acid Rain source as defined under title IV of the federal Act. The Acid Rain program has additional forms. See http://www.env.nm.gov/aqb/index.html. Sources that are subject to both the Title V and Acid Rain regulations are encouraged to submit both applications simultaneously.
* Any source in a source category designated by the EPA Administrator ("Administrator"), in whole or in part, by regulation, after notice and comment.

This is not a Title V application.

Section 20
Other Relevant Information

Section 20

Other Relevant Information

Other relevant information. Use this attachment to clarify any part in the application that you think needs explaining. Reference the section, table, column, and/or field. Include any additional text, tables, calculations or clarifying information.

Additionally, the applicant may propose specific permit language for AQB consideration. In the case of a revision to an existing permit, the applicant should provide the old language and the new language in track changes format to highlight the proposed changes. If proposing language for a new facility or language for a new unit, submit the proposed operating condition(s), along with the associated monitoring, recordkeeping, and reporting conditions. In either case, please limit the proposed language to the affected portion of the permit.

No other relevant information is provided.

Section 21
Addendum for Landfill Applications

Section 21

Addendum for Landfill Applications

Do not print this section unless this is a landfill application.

Landfill Applications are not required to complete Sections 1-C Input Capacity and Production Rate, 1-E Operating Schedule, 17 Compliance Test History, and 18 Streamline Applications. Section 12 – PSD Applicability is required only for Landfills with Gas Collection and Control Systems and/or landfills with other non-fugitive stationary sources of air emissions such as engines, turbines, boilers, heaters. All other Sections of the Universal Application Form are required.

EPA Background Information for MSW Landfill Air Quality Regulations:
https://www3.epa.gov/airtoxics/landfill/landflpg.html

NM Solid Waste Bureau Website: https://www.env.nm.gov/swb/

This is not a landfill.

Section 22
Certification

Section 22: Certification

Company Name: PEI on behalf of ConocoPhillips

I, Evan Tullos, hereby certify that the information and data submitted in this application are true and as accurate as possible, to the best of my knowledge and professional expertise and experience.

Signed this 9th day of January, ~~2020~~ 2021, upon my oath or affirmation, before a notary of the State of Illinois.

*Signature Date 1/9/21

Evan Tullos Printed Name

Vice President Title

Scribed and sworn before me on this 9th day of JANUARY, 2024.

My authorization as a notary of the State of Illinois expires on the 5th day of August, 2024.

Notary's Signature Date 1/9/2024

Mark Reed Notary's Printed Name

*For Title V applications, the signature must be of the Responsible Official as defined in 20.2.70.7.AE NMAC.

Section 23
Universal Application 4

Universal Application 4

Air Dispersion Modeling Report

Refer to and complete Section 16 of the Universal Application form (UA3) to assist your determination as to whether modeling is required. If, after filling out Section 16, you are still unsure if modeling is required, e-mail the completed Section 16 to the AQB Modeling Manager for assistance in making this determination. If modeling is required, a modeling protocol would be submitted and approved prior to an application submittal. The protocol should be emailed to the modeling manager. A protocol is recommended but optional for minor sources and is required for new PSD sources or PSD major modifications. Fill out and submit this portion of the Universal Application form (UA4), the "Air Dispersion Modeling Report", only if air dispersion modeling is required for this application submittal. This serves as your modeling report submittal and should contain all the information needed to describe the modeling. No other modeling report or modeling protocol should be submitted with this permit application.

16-A: Identification

1	Name of facility:	Zia Hills Central Facility
2	Name of company:	ConocoPhillips
3	Current Permit number:	7746
4	Name of applicant's modeler:	Bruce Ferguson
5	Phone number of modeler:	(601) 826-6376
6	E-mail of modeler:	bferguson@fce-engineering.com

16-B: Brief

1	Was a modeling protocol submitted and approved?	Yes☐	No☒
2	Why is the modeling being done?	Other (describe below)	
3	Describe the permit changes relevant to the modeling.		
	The site is increasing production and will now require a NSR permit instead of GCP-Oil & Gas.		
4	What geodetic datum was used in the modeling?	NAD83	
5	How long will the facility be at this location?	indefinite	
6	Is the facility a major source with respect to Prevention of Significant Deterioration (PSD)?	Yes☐	No☒
7	Identify the Air Quality Control Region (AQCR) in which the facility is located	155	

8	List the PSD baseline dates for this region (minor or major, as appropriate).			
	NO2	3/16/1988		
	SO2	7/28/1978		
	PM10	2/20/1979		
	PM2.5	11/13/2013		
9	Provide the name and distance to Class I areas within 50 km of the facility (300 km for PSD permits).			
	None			
10	Is the facility located in a non-attainment area? If so describe below		Yes☐	No☒
11	Describe any special modeling requirements, such as streamline permit requirements.			
	None			

16-C: Modeling History of Facility

Describe the modeling history of the facility, including the air permit numbers, the pollutants modeled, the National Ambient Air Quality Standards (NAAQS), New Mexico AAQS (NMAAQS), and PSD increments modeled. (Do not include modeling waivers).

1	Pollutant	Latest permit and modification number that modeled the pollutant facility-wide.	Date of Permit	Comments
	CO			
	NO_2			
	SO_2			
	H_2S			
	PM2.5			
	PM10			
	Lead			
	Ozone (PSD only)			
	NM Toxic Air Pollutants (20.2.72.402 NMAC)			

16-D: Modeling performed for this application

For each pollutant, indicate the modeling performed and submitted with this application.
Choose the most complicated modeling applicable for that pollutant, i.e., culpability analysis assumes ROI and cumulative analysis were also performed.

1	Pollutant	ROI	Cumulative analysis	Culpability analysis	Waiver approved	Pollutant not emitted or not changed.
	CO	☒	☒	☐	☐	☐
	NO_2	☒	☒	☐	☐	☐
	SO_2	☒	☐	☐	☐	☐

	H_2S	☐	☐	☐	☐	☒
	PM2.5	☒	☒	☐	☐	☐
	PM10	☒	☐	☐	☐	☐
	Lead	☐	☐	☐	☐	☒
	Ozone	☐	☐	☐	☐	☒
	State air toxic(s) (20.2.72.402 NMAC)	☐	☐	☐	☐	☒

16-E: New Mexico toxic air pollutants modeling

1	List any New Mexico toxic air pollutants (NMTAPs) from Tables A and B in 20.2.72.502 NMAC that are modeled for this application. NON3

2 List any NMTAPs that are emitted but not modeled because stack height correction factor. Add additional rows to the table below, if required.

Pollutant	Emission Rate (pounds/hour)	Emission Rate Screening Level (pounds/hour)	Stack Height (meters)	Correction Factor	Emission Rate/ Correction Factor

16-F: Modeling options

1	Was the latest version of AERMOD used with regulatory default options? If not explain below.	Yes☒	No☐

16-G: Surrounding source modeling

1	Date of surrounding source retrieval	MergeMaster March 11, 2020

2 If the surrounding source inventory provided by the Air Quality Bureau was believed to be inaccurate, describe how the sources modeled differ from the inventory provided. If changes to the surrounding source inventory were made, use the table below to describe them. Add rows as needed.

AQB Source ID	Description of Corrections

16-H: Building and structure downwash

1	How many buildings are present at the facility?	None	
2	How many above ground storage tanks are present at the facility?	17	
	Was building downwash modeled for all buildings and tanks? If not explain why below.	Yes☒	No☐

3		
4	Building comments	

16-I: Receptors and modeled property boundary

1	"Restricted Area" is an area to which public entry is effectively precluded. Effective barriers include continuous fencing, continuous walls, or other continuous barriers approved by the Department, such as rugged physical terrain with a steep grade that would require special equipment to traverse. If a large property is completely enclosed by fencing, a restricted area within the property may be identified with signage only. Public roads cannot be part of a Restricted Area. A Restricted Area is required in order to exclude receptors from the facility property. If the facility does not have a Restricted Area, then receptors shall be placed within the property boundaries of the facility. Describe the fence or other physical barrier at the facility that defines the restricted area.		
	Fence surrounds the facility		
2	Receptors must be placed along publicly accessible roads in the restricted area. Are there public roads passing through the restricted area?	Yes☐	No☐
3	Are restricted area boundary coordinates included in the modeling files?	Yes☐	No☐

4 Describe the receptor grids and their spacing. The table below may be used, adding rows as needed.

Grid Type	Shape	Spacing	Start distance from restricted area or center of facility	End distance from restricted area or center of facility	Comments
Cartesian	Circle	50 m	0	1 km	
Cartesian	Circle	100 m	1 km	3 km	
Cartesian	Circle	250 m	3 km	6 km	
Cartesian	Circle	500 m	6 km	10 km	
Cartesian	Circle	1000 m	10 km	50 km	

5	Describe receptor spacing along the fence line. 50 meters spacing was included on the fence line
6	Describe the PSD Class I area receptors. N/A

16-J: Sensitive areas

1	Are there schools or hospitals or other sensitive areas near the facility? If so describe below. This information is optional (and purposely undefined) but may help determine issues related to public notice.	Yes☐	No☒

3	The modeling review process may need to be accelerated if there is a public hearing. Are there likely to be public comments opposing the permit application?	Yes☐	No☒

16-K: Modeling Scenarios

1	Identify, define, and describe all modeling scenarios. Examples of modeling scenarios include using different production rates, times of day, times of year, simultaneous or alternate operation of old and new equipment during transition periods, etc. Alternative operating scenarios should correspond to all parts of the Universal Application and should be fully described in Section 15 of the Universal Application (UA3).		
	Three scenarios were used for the flares. Normal Operating included only the flare pilots. Two SSM scenarios were included, one with high pressure gas flaring at FL1 and all intermittent low pressure VRU downtime gas at FL2. The second scenario split the VRU downtime gas between FL2 and FL3. Even though FL2 and FL3 are backups to one another, both scenarios were modeled to ensure all impacts were reviewed.		
2	Which scenario produces the highest concentrations? Why?		
	For pollutants other than CO, there was no significant difference in the maximum impacts because the flares were not the controlling source for the maximum impacts. For CO, the second SSM scenario produced the highest impacts because the two flares are located close together and splitting the gas results in less plume rise for the same amount of emissions.		
3	Were emission factor sets used to limit emission rates or hours of operation? (This question pertains to the "SEASON", "MONTH", "HROFDY" and related factor sets, not to the factors used for calculating the maximum emission rate.)	Yes☐	No☒
4	If so, describe factors for each group of sources. List the sources in each group before the factor table for that group. (Modify or duplicate table as necessary. It's ok to put the table below section 16-K if it makes formatting easier.) Sources:		

5

Hour of Day	Factor	Hour of Day	Factor								
1		13									
2		14									
3		15									
4		16									
5		17									
6		18									
7		19									
8		20									
9		21									
10		22									
11		23									
12		24									

If hourly, variable emission rates were used that were not described above, describe them below.

6	Were different emission rates used for short-term and annual modeling? If so describe below.	Yes☐	No☒

16-L: NO_2 Modeling

1	Which types of NO_2 modeling were used? Check all that apply.	
	☐	ARM2
	☒	100% NO_X to NO_2 conversion
	☐	PVMRM
	☐	OLM
	☐	Other:
2	Describe the NO_2 modeling.	
	The facility NOx emissions were modeled, assuming total conversion and monitored background was added to the facility impacts to account for surrounding source.	
3	Were default NO_2/NO_X ratios (0.5 minimum, 0.9 maximum or equilibrium) used? If not describe and justify the ratios used below.	Yes☐ No☐
	N/A	
4	Describe the design value used for each averaging period modeled.	
	1-hour: High first high Annual: One Year Annual Average	

16-M: Particulate Matter Modeling

1	Select the pollutants for which plume depletion modeling was used.	
	☐	PM2.5
	☐	PM10
	☒	None
2	Describe the particle size distributions used. Include the source of information.	
	None	
3	Does the facility emit at least 40 tons per year of NO_X or at least 40 tons per year of SO_2? Sources that emit at least 40 tons per year of NO_X or at least 40 tons per year of SO_2 are considered to emit significant amounts of precursors and must account for secondary formation of PM2.5.	Yes☒ No☐
4	Was secondary PM modeled for PM2.5?	Yes☐ No☒
5	If MERPs were used to account for secondary PM2.5 fill out the information below. If another method was used describe below.	

NO_X (ton/yr)	SO_2 (ton/yr)	$[PM2.5]_{annual}$	$[PM2.5]_{24\text{-}hour}$
56.51 (including SSM)	5.11 (including SSM)	0.002 ug/m^3	0.019 ug/m^3

Southwest Climate Zone Lowest MERPs

State	County	Metric	Precursor	Emissions	Stack	MERP
Colorado	Weld Co	Annual $PM_{2.5}$	NO_x	1000	10	10530
Colorado	Weld Co	Annual $PM_{2.5}$	SO_2	1000	10	7359

Colorado	Weld Co	Daily $PM_{2.5}$	NO_x	1000	10	5215
Colorado	Weld Co	Daily $PM_{2.5}$	SO_2	1000	10	814

$[PM2.5]_{annual}$ = SIL x [NO_x Annual Emissions/10530 + SO_2 Annual Emissions/7359]
=(0.2 ug/m^3)[(56.51/10530) + (5.11/7359)]
=0.002 ug/m^3

$[PM2.5]_{24\text{-}hour}$ = SIL x [NO_x Annual Emissions/5215 + SO2 Annual Emissions/814]
= (1.2 ug/m^3)[(56.51/5215)+(5.11/814)]
= 0.019 ug/m^3

16-N: Setback Distances

1	Portable sources or sources that need flexibility in their site configuration requires that setback distances be determined between the emission sources and the restricted area boundary (e.g. fence line) for both the initial location and future locations. Describe the setback distances for the initial location.
	None
2	Describe the requested, modeled, setback distances for future locations, if this permit is for a portable stationary source. Include a haul road in the relocation modeling.

16-O: PSD Increment and Source IDs

1	The unit numbers in the Tables 2-A, 2-B, 2-C, 2-E, 2-F, and 2-I should match the ones in the modeling files. Do these match? If not, provide a cross-reference table between unit numbers if they do not match below.	Yes☒	No☐

Unit Number in UA-2	Unit Number in Modeling Files

2	The emission rates in the Tables 2-E and 2-F should match the ones in the modeling files. Do these match? If not, explain why below.	Yes☒	No☐
	SSM emissions are identified by suffix SSM on the flare		
3	Have the minor NSR exempt sources or Title V Insignificant Activities" (Table 2-B) sources been modeled?	Yes☐	No☐

4 Which units consume increment for which pollutants?

Unit ID	NO_2	SO_2	PM10	PM2.5
All Units	x	x	x	x

5	PSD increment description for sources. (for unusual cases, i.e., baseline unit expanded emissions after baseline date).	

6	Are all the actual installation dates included in Table 2A of the application form, as required? This is necessary to verify the accuracy of PSD increment modeling. If not please explain how increment consumption status is determined for the missing installation dates below.	Yes☒	No☐

16-P: Flare Modeling

1	For each flare or flaring scenario, complete the following			
	Flare ID (and scenario)	Average Molecular Weight	Gross Heat Release (cal/s)	Effective Flare Diameter (m)
	Normal Operation			
	FL1	21.63	20,318	0.126
	FL2	21.63	31,802	0.157
	FL3	21.63	31,802	0.157
	SSM1			
	FL1_SSM	21.63	101,051,412	8.860
	FL2_SSM	38.02	7,189,258	2.250
	FL3_SSM	21.63	20,318	0.126
	SSM2			
	FL1_SSM2	21.63	101,051,412	8.860
	FL2_SSM2	37.94	3,604,788	1.593
	FL3_SSM2	37.94	3,604,788	1.593

16-Q: Volume and Related Sources

1	Were the dimensions of volume sources different from standard dimensions in the Air Quality Bureau (AQB) Modeling Guidelines? If not please explain how increment consumption status is determined for the missing installation dates below.	Yes☐	No☐
	N/A		
2	Describe the determination of sigma-Y and sigma-Z for fugitive sources.		
3	Describe how the volume sources are related to unit numbers. Or say they are the same.		
4	Describe any open pits.		
5	Describe emission units included in each open pit.		

16-R: Background Concentrations

1	Were NMED provided background concentrations used? Identify the background station used below. If non-NMED provided background concentrations were used describe the data that was used.	Yes☒	No☐
	CO: Del Norte High School (350010023)		
	NO_2: Hobbs-Jefferson (350250008)		
	PM2.5: Hobbs-Jefferson (350450019)		
	PM10: Hobbs-Jefferson (350250008)		
	SO_2: Amarillo (483751025)		
	Other:		
	Comments:		
2	Were background concentrations refined to monthly or hourly values? If so describe below.	Yes☐	No☒

16-S: Meteorological Data

1	Was NMED provided meteorological data used? If so select the station used. Artesia 2015	Yes☒	No☐
2	If NMED provided meteorological data was not used describe the data set(s) used below. Discuss how missing data were handled, how stability class was determined, and how the data were processed.		
	N/A		

16-T: Terrain

1	Was complex terrain used in the modeling? If not, describe why below.	Yes☒	No☐
2	What was the source of the terrain data?		
	NED data through http://www.webgis.com/, downloaded through the Lakes Environmental GUI		

16-U: Modeling Files

1	Describe the modeling files: Significance analysis in included in the folder SIA. Significance analysis was used with monitored data as the cumulative analysis to demonstrate compliance with the SO2 1-hr and NOx standards. Surrounding sources were explicitly modeled for PM2.5 and the cumulative analysis is in the folder SIA. The significant impact area for PM2.5 was within the 100-meter spacing and only significant receptors from the preliminary analysis were used in the cumulative analysis.

	File name (or folder and file name)	Pollutant(s)	Purpose (ROI/SIA, cumulative, culpability analysis, other)
	SIA\NOx.zip	NO2	ROI , Cumulative
	SIA\CO.zip	CO	ROI
	SIA\SO2.zip	SO2	ROI & Cumulative
	SIA\PM25.zip	PM2.5, PM10	ROI
	CIA\PM25.zip	PM2.5	Cumulative
	Generic zip file contents are summarized below		
	Artesia-Midland_2015.PFL & .SFC	Met Data as downloaded from NMED	
	Surrounding Sources\	Surrounding source files generated by MergeMaster	
	zia.jgw, .jpg, .wdt	Georeferenced facility layout	
	MERPs table_export.xlsx	MERPs downloaded from EPA for Southwest Climate Zone	
	[Pollutant].ADI	AERMOD input file	
	[Pollutant].ADO	AERMOD output file	
	[Pollutant].sum	AERMOD output summary file	
	[Pollutant].bpi	BPIP input file	
	[Pollutant].pro	BPIP output file	
	\[Pollutant].AD\	Plot File Directory	
	[Avg Period][Rank]G[xxx].PLT	Plot file naming convention. Where facility source groups were used G001 denotes normal operation, G002 denotes SSM operations and G003 denotes flaring evenly distributed between flares. For PM2.5 cumulative G001 denotes NAAQS modeling and G002 denotes PSD increment modeling.	

16-V: PSD New or Major Modification Applications (N/A)

1	A new PSD major source or a major modification to an existing PSD major source requires additional analysis. Was preconstruction monitoring done (see 20.2.74.306 NMAC and PSD Preapplication Guidance on the AQB website)?	Yes☐	No☐
2	If not, did AQB approve an exemption from preconstruction monitoring?	Yes☐	No☐
3	Describe how preconstruction monitoring has been addressed or attach the approved preconstruction monitoring or monitoring exemption.		
4	Describe the additional impacts analysis required at 20.2.74.304 NMAC.		
5	If required, have ozone and secondary PM2.5 ambient impacts analyses been completed? If so describe below.	Yes☐	No☐

16-W: Modeling Results

1	If ambient standards are exceeded because of surrounding sources, a culpability analysis is required for the source to show that the contribution from this source is less than the significance levels for the specific pollutant. Was culpability analysis performed? If so describe below.	Yes☐	No☒
2	Identify the maximum concentrations from the modeling analysis. Rows may be modified, added and removed from the table below as necessary.		

Pollutant, Time Period and Standard	Modeled Facility Concentration (µg/m3)	Modeled Concentration with Surrounding Sources (µg/m3)	Secondary PM (µg/m3)	Background Concentration (µg/m3)	Cumulative Concentration (µg/m3)	Value of Standard (µg/m3)	Percent of Standard	Location

16-X: Summary/conclusions

	A statement that modeling requirements have been satisfied and that the permit can be issued.
1	The facility was modeled at the emission rates detailed on 2-E and 2-F of the application. The modeled impacts were below the modeling significance levels for CO, PM10, and the SO2 3-hr, 24-hr and annual averaging periods. Monitored background values from the NMED guidelines were used to account for surrounding sources for the NO2 annual, NO2 1-hr, and SO2 1-hr standards. Surrounding source impacts of PM2.5 were accounted for by explicitly modeling the surrounding sources and adding monitored background. The modeling results indicate that the impacts surrounding the facility are in compliance with the ambient air quality standards and the facility will not cause or contribute to an exceedance of the standards. The modeling requirements have been satisfied and the permit can be issued.
