Kandi & David LeMoine	7/17/2007	... I reviewed what the monitoring group put together, and I think they did an excellent work.	
BP	7/13/2007	<p>While the Draft Report suggestion for addition of new monitoring sites will provide valuable insight to understanding air quality in the region, a detailed analysis of current monitoring data also needs to be conducted to identify trends in air quality. In addition, analyzing trends in monitoring data in conjunction with changes in emissions will provide an important understanding of atmospheric processes. Also, it may be possible to evaluate monitoring data to assist in understanding source receptor relationships.</p> <p>Confidence limits need to be developed based on monitoring accuracy and precision to determine if observed trends in data are statistically significant or simply random variations in analytic methods. There are also bounding calculations that could be performed that may assist in determining how changes in emissions may change visibility. Such calculations would entail using the IMPROVE data and ratioing the concentrations to calculate the improvement in visibility and establish an upper bound of visibility improvement.</p> <p>It is recommended that the Task Force conduct a detailed analysis of the IMPROVE monitoring data in the region since BP believes that such an analysis would assist in developing meaningful strategies for improving air quality in the region. BP would welcome the opportunity to assist in establishing a scope of work for such an activity.</p>	
Jeanne Hoadley	7/10/2007	I would find it helpful if the wind roses on the maps were labeled with the station name.	
Jeanne Hoadley	7/10/2007	Under existing ozone data for the four corners region it says a Navajo Nation site is scheduled to begin operating in Shiprock but doesn't say when. If it is scheduled this implies we know when and we should say. If we don't know when we should say it is expected to begin operating soon.	
Jeanne Hoadley	7/10/2007	<p>Under existing ozone data for the four corners region it says a Navajo Nation site is scheduled to begin operating in Shiprock but doesn't say when. If it is scheduled this implies we know when and we should say. If we don't know when we should say it is expected to begin operating soon.</p> <p>The next sentence has a typo...the "closest" Arizona site</p>	
Mark Jones	7/10/2007	Comment on behalf of Roy Paul, "Why is there no ozone monitoring on the Western Slope of Colorado?"	
Jeanne Hoadley	7/10/2007	The pollutants in the header seem to be out of place in this table	4 - Criteria Pollutant Sites
Jeanne Hoadley	7/10/2007	Again the header in this table is messed up, making it impossible to understand.	6 - Deposition Sites
Jeanne Hoadley	7/10/2007	Mercury- Rationale and Benefits. It is not clear to me why Weminuche Wilderness is singled out here...there are many other Class 1 areas in or near this region.	14 - Mercury
