

LEGAL NOTICE

and

Preliminary Determination for an Air Quality Permit for

DCP Midstream, L.P.

DCP Midstream, L.P., 370 17th St., Suite 2500, Denver, CO has submitted an air quality permit application to the Air Quality Bureau (AQB), New Mexico Environment Department (NMED) for an air quality permit to modify DCP Midstream - Eunice Gas Plant. The application file has been assigned Permit No. 0044-M10 and TEMPO Agency Interest ID No. 595. The exact location of the facility is at latitude 32 deg, 30 min, 50.1734 sec and longitude -103 deg, 17 min, 9.9622 sec. To aid in locating this facility, the approximate location is 7 miles NW of Eunice in Lea County, NM.

The proposed modification will consist of accounting for existing Startup, Shutdown, and Maintenance (SSM) and Malfunction emissions; and updating emissions factors and estimated emissions for several engines.

Total air pollutant emissions to the atmosphere are estimated to be approximately Nitrogen Oxides (NO_x) at 700.1 tpy (+10); Carbon Monoxide (CO) at 317.6 tpy (+59.7); Volatile Organic Compounds (VOC) at 137.5 tpy (+27.6); Sulfur Dioxide (SO₂) at 3,033.9 tpy (+273.2); and Total Suspended Particulate Matter (TSP) at 15.4 tpy (no change), Particulate Matter 10 microns or less (PM₁₀) at 12.8 tpy (no change); and Particulate Matter 2.5 microns or less (PM_{2.5}) at 11.7 tpy, and Hydrogen Sulfide (H₂S) at 33.9 tpy (+3.3). The facility is a major, >100,000 tpy CO₂e source of greenhouse gas emissions. These emission estimates could change slightly during the course of the Department's review of the application.

The NMED has conducted a preliminary review of the information submitted with the permit application. The preliminary review and applicant's analysis of ambient air quality impacts indicates that the facility's air emissions will meet the ambient air quality standards for CO, NO₂, SO₂, TSP, PM₁₀, and PM_{2.5}. A full review will evaluate the estimated emission rates for the pollutants listed above and the air quality analysis to determine compliance with the associated ambient air standards and requirements.

The NMED has conducted a preliminary review of the information submitted with the permit application and found that only volatile organic compounds (VOCs) are being increasing due to this modification. VOCs are a pre-cursor to ozone. Pre-construction air dispersion modeling is not required for VOCs and ozone. To determine compliance with national ambient air quality standards, NMED monitors ambient ozone concentrations. A full review will evaluate the estimated emission rates and determine compliance with air quality regulations.

Based on the applicant's analysis, a preliminary determination is that this facility will comply with the requirements of Title 20, New Mexico Administrative Code (NMAC), Chapter 2, Parts 3, 35, 37, 61, 70, 71, 72, 73, 74, 75, 77, 80, and 82; federal Standards of Performance for New Stationary Sources (NSPS) under 40 CFR 60, Subparts A, GG, Kb, KKK; the National Emission Standards for Hazardous Air Pollutants (NESHAPs) - Maximum Achievable Control Technology (MACT) standards, 40 CFR 63, Subparts A and HH; and the New Mexico Air Quality Control Act. Therefore, the preliminary intent of NMED is to issue the air quality permit on or before June 24, 2013. This source is a major source according to 20.2.74 NMAC, PSD.

To ensure compliance with state and federal air regulations, the permit is expected to include conditions that limit the emissions, and conditions that will require record keeping and reporting to the Department.

The permit application is available for review in electronic or hard copy at the Air Quality Bureau Office, 525 Camino de los Marquez Suite 1, Santa Fe, New Mexico. To arrange viewing of this application contact Teri Waldron, at 505-476-4355 or teri.waldron@state.nm.us. The permit application is also available at the NMED Hobbs Office, located at 726 E. Michigan - Suite 160, Hobbs, NM 88240 for public review.

All interested persons have thirty (30) days from the date this notice is published, to notify the Department in writing of their interest in the permit application. The written comments should refer to the company name, site name and Permit No. (or send a copy of this notice along with your comments). The written comments shall state the nature of the issues raised and how it relates to the requirements of applicable state and federal air quality regulations and the Clean Air Act. The written comments should be mailed to Joseph Kimbrell, New Mexico Environment Dept., Air Quality Bureau, Permit Section, 525 Camino de los Marquez Suite 1, Santa Fe, NM 87505-1816.

The Department will notify all persons, who have provided written comments, as to when and where the Department's analysis may be reviewed. Although all written comments will be made part of the public record, any person who does not express interest in writing prior to the end of this first thirty (30) day period will not receive such notification.

If the Department receives written public comment prior to the end of the Department's thirty (30) day public notice, the Department's analysis will be made available for review for thirty (30) days at the NMED district or field office nearest to the source before the permit will be issued. Written comments on the analysis or permit application may be submitted to the Department during this second thirty (30) day period or at any time before the permit is issued or denied.

Questions or comments not intended to be part of the public record can be directed to Joseph Kimbrell at 505-476-4347. General information about air quality and the permitting process can be found at the Air Quality Bureau's web site. The regulation dealing with public participation in the permit review process is 20.2.72.206 NMAC. This regulation can be found in the "Permits" section of this web site.
