

**PUBLIC NOTICE**  
For  
Air Quality Operating Permit  
for Golf Course Booster Station of DCP Midstream, LP

DCP Midstream, LP at 10 Desta Drive, Suite 400 West, Midland, TX 79705, has submitted an air quality operating permit application to the New Mexico Environment Department (NMED) for an air quality operating permit for its Golf Course Booster Station. The owner of this plant is DCP Midstream LP. The exact location of the facility is at latitude 32 deg, 26 min, 57.12 sec; and longitude 103 deg, 12 min, 52.2 sec. This facility is located approximately 2.5 miles west of the intersection of SR-176 (Avenue O) and SR-207, which is in the center of Eunice in Lea County, NM. This application file has been assigned an Operating Permit Number P057-R3 and TEMPO Agency Interest ID No. 592.

Previously, the facility received an air quality construction permit and is in operation.

Golf Course Booster Station is a natural gas compressor booster station (SIC code 1311) which operates three compressor engines. Gas from the gathering system is collected here for removal of heavy hydrocarbons and water, and is then compressed and sent to the gas processing plant.

This operating permit application is for a permit renewal. Per 20.2.70.401.C.(4) NMAC, this permitting action involves the following modifications which have been previously permitted and authorized under NSR Permits 0028-M5, 0028-M5R1, and 0028-M5R2: the addition of a 500 bbl condensate tank (TK-13) to replace units TK-9 and TK-10; the inclusion of combined SSM / malfunction emissions with a total limit of 10 tons per year per pollutant; the revised HAP and VOC emissions from truck loading (LOAD); and the replacement of Units 4 and 18 with like-kind engines.

The emissions, as established in NSR Permit 0028-M5, and brought forward into this permit are as follows: Parentheses note changes in emissions from previous operating permit – P057-R2. Emissions are expressed in tons per year (tpy). Nitrogen Oxides (NO<sub>x</sub>) at 784.0 tpy (-0.4); Carbon Monoxide (CO) at 174.2 tpy (-0.2); Volatile Organic Compounds (VOC) at 178.5 tpy (-22.5); Sulfur Dioxide (SO<sub>2</sub>) at 0.12 tpy (+0.02); Particulate Matter 10 microns or less (PM<sub>10</sub>) at 10.8 tpy (no change), Particulate Matter 2.5 microns or less (PM<sub>2.5</sub>) at 10.8 tpy (no change). The facility is a minor (< 100,000 tpy CO<sub>2e</sub>) source of greenhouse gas emissions.

The NMED has conducted a preliminary review of the information submitted with the permit application. This review included evaluation of the emission rates and applicable requirements to determine compliance.

The NMED has made a preliminary determination that this facility will comply with the requirements of Title 20, New Mexico Administrative Code (NMAC), Chapter 2, Parts 7, 61, 70, 71, 72, 73, 74, 77, and 82; 40 CFR 50; 40 CFR 63 Subparts A, and ZZZZ; and the New Mexico Air Quality Control Act. Therefore, the preliminary intent of NMED is to issue the air quality operating permit on or before 7-18-2014.

Interested persons may obtain the draft operating permit, submit written comments, or request a public hearing on Operating Permit Number P057-R3 by contacting Cille Pritchard-Hoback at the New Mexico Environment Department, Air Quality Bureau, 525 Camino de los Marquez Suite 1, Santa Fe, NM 87505-1816.

Written requests for public hearing must state the nature of the issues proposed to be raised in the hearing. Comments must be based on the requirements of the applicable state and federal air quality regulations and the Clean Air Act. Comments or hearing requests must be received within 30 days after the public notice is published.

The permit application, draft permit and relevant supporting materials are currently available for review at the Air Quality Bureau, 525 Camino de los Marquez Suite 1, Santa Fe, NM 87505-1816. The Department contact in Santa Fe is Cille Pritchard-Hoback at (505) 476-4340.
