

**PUBLIC NOTICE**  
For  
Air Quality Operating Permit  
for Lusk Booster Station of DCP Midstream, L.P.

DCP Midstream, L.P. at 370 17th St, Suite 2500; Denver, CO 80202 has submitted an air quality operating permit application to the New Mexico Environment Department (NMED) for an air quality operating permit for its Lusk Booster Station. The owner of this plant is DCP Midstream, L.P.. The exact location of the facility is at latitude 32 deg, 39 min, 8.2 sec and longitude -103 deg, 48 min, 16.89 sec. To aid in locating this facility, the approximate location is 15 miles S. of Majamar in Lea County, New Mexico. This application file has been assigned an Operating Permit Number P093-R2-M1 and TEMPO Agency Interest ID No. 599.

Previously, the facility received an air quality construction permit and is in operation. The facility is a natural gas compressor station. Pipeline natural gas from the gathering system enters the facility where the compressor engines compress the gas. The compressed natural gas is then transported to the pipelines.

This operating permit application is for a permit modification. Per 20.2.70.401.C.(4) NMAC, this permitting action involves the following: increasing Tank TK-3 volumetric throughput from 252,000 to 400,000 gallons/year, revising VOC, H<sub>2</sub>S, and HAP tank emissions using an increase of separator pressure, removing previously permitted vented emissions, which are now routed to the flare, the addition of emissions for the proposed flare, and revising SSM and Malfunction emissions.

The emissions, as established in NSR Permit 0355-M6, and brought forward into this permit are as follows. Parentheses note changes in emissions from previous operating permit P093-R2. Emissions are expressed in tons per year (tpy). Nitrogen Oxides (NO<sub>x</sub>) at 583.1 tpy (+9.1); Carbon Monoxide (CO) at 230.7 tpy (+20.5); Volatile Organic Compounds (VOC) at 60.5 tpy (+8.5); Sulfur Dioxide (SO<sub>2</sub>) at 10.7 tpy (+10.7); Total Suspended Particulates (TSP) at 7.3 tpy (+0.3); Particulate Matter 10 microns or less (PM<sub>10</sub>) at 7.3 tpy (+0.3), and Particulate Matter 2.5 microns or less (PM<sub>2.5</sub>) at 7.3 tpy (+7.3). The facility is a minor, < 100,000 tpy CO<sub>2e</sub>, source of green house gas emissions.

The NMED has conducted a preliminary review of the information submitted with the permit application. This review included evaluation of the emission rates and applicable requirements to determine compliance.

The NMED has made a preliminary determination that this facility will comply with the requirements of Title 20, New Mexico Administrative Code (NMAC), Chapter 2, Parts 1, 7, 61, 70, 71, 72, 73, 74, 75, and 82; 40 CFR 50; 40 CFR 63, Subparts A and ZZZZ; and the New Mexico Air Quality Control Act. Therefore, the preliminary intent of NMED is to issue the air quality operating permit on or before November 29, 2013.

Interested persons may obtain the draft operating permit, submit written comments, or request a public hearing on Operating Permit Number P093-R2-M1 by contacting Melinda Owens at the New Mexico Environment Department, Air Quality Bureau, 525 Camino de los Marquez Suite 1, Santa Fe, NM 87505-1816.

Written requests for public hearing must state the nature of the issues proposed to be raised in the hearing. Comments must be based on the requirements of the applicable state and federal air quality regulations and the Clean Air Act. Comments or hearing requests must be received within 30 days after the public notice is published.

The permit application, draft permit and relevant supporting materials are currently available for review at the Air Quality Bureau, 525 Camino de los Marquez Suite 1, Santa Fe, NM 87505-1816. The Department contact in Santa Fe is Melinda Owens at 505-476-4341.
