

Synthetic THC Emergency Rule Factsheet

What problem does this rule solve?

- Using hemp to make synthetic THC products is dangerous
- Delta-8 is an intoxicating synthetic THC that is marketed to kids in drinks and vape devices
- Consuming or inhaling synthetic THC causes agitation, hypertension and hypotension, cough, abnormal heart rate, paranoia, anxiety, memory loss, confusion, breathing difficulties, seizures, and even death
- Synthetic THC products are made by exploiting a loophole in federal law.
- This emergency rule closes the federal loophole for products manufactured in New Mexico

Delta-8 THC Synthetization

Rule Overview

Summary

- Defines synthetic THC in two categories: semi-synthetic & synthetic cannabinoids
- NM-based manufacturers:
 - May not produce or use synthetic THC.
 - May receive & use specific pure non-intoxicating synthetic products .
 - Must prove hemp ingredients used are derived from hemp & are natural.

Who does this apply to?

- The emergency rule applies to:
- Hemp extraction, manufacturing, and warehouse facilities.
- Cannabis manufacturers that use hemp-derived ingredients in products.
