NAWT Training Programs: Basic and Inspector Training The National Association of Wastewater Transporters, Inc. (NAWT) is an education conduit for the industry at the national level. This is the national certification program for individual sewage treatment system inspection. The inspection education program incorporates the USEPA proposed five management levels to provide the rationale and basis for inspecting onsite wastewater treatment systems. Currently there are over 1,100 inspectors registered on the NAWT website. The NAWT level of inspection is at the operation level. It requires the inspector to locate and identify all parts of the onsite treatment system. Then the inspector needs to assess the condition of each part and determine whether it is operating properly or if there are system deficiencies to be corrected. To do this requires that all parts of the system be accessible and opened for inspection. This includes septic tanks, pump chambers, pretreatment media filters, aerobic treatment units and soil treatment units.

The NAWT program requires inspectors to complete 8 hours of continuing education every 2 years to maintain their certification. If you are taking this class for the 1st time and not renewing certification, contact Bill McKinstry for more info, billmckinstry@msn.com, (505)989-7676 or toll free 1(800)638-8569

REGISTRATION – to register, please complete the form below and fax to **(505)213-0114**
