RE: Infiltrator Quick4 Chamber Normal Sizing Restored

Dear Mr. Thompson,

Due to the replacement with recently manufactured stock of the Quick4 High Capacity and Standard Chamber products throughout New Mexico, and assurance from you, representing Infiltrator Systems, Inc., that the manufacturing process for these products has been adequately corrected, and that a quality assurance program has been put in place, the New Mexico Environment Department (NMED) has restored the normal sizing of disposal systems constructed with these products, as shown below:

Unit	Absorption Area (square feet)
Quick4 Standard chamber	16.0
Quick4 High Capacity chamber	19.3

The normal sizing will remain in place on an interim basis, as previously described, i.e. until data can be gathered in a field study of mature onsite systems facilitating a more accurate assessment of the long-term performance of chamber products.

It is our understanding that all defective Quick 4 products have been removed from all distributors' stock serving New Mexico. Any drainfield systems installed using the defective products, should any inadvertently remain in the hands of distributors, contractors or any other persons, will continue to be subject to the reduced sizing, as shown below:

Unit	Absorption Area
------	-----------------

	(square feet)
Quick4 Standard chamber	14.4
Quick4 High Capacity chamber	17.1

If you have any questions, please feel free to contact Tom Brandt at 505-476-8609.

Sincerely,

Dennis McQuillan
