**Los Alamos National Laboratory
Federal Facility Compliance Order
Annual Site Treatment Plan Update
for Fiscal Year ~~2018-2019~~,
Revision 2930.0**

Newport News Nuclear BWXT-Los Alamos, LLC (N3B), under the U.S. Department of Energy Office of Environmental Management Contract No. 89303318CEM000007 (the Los Alamos Legacy Cleanup Contract), has prepared this document. The public may copy and use this document without charge, provided that this notice and any statement of authorship are reproduced on all copies.

CONTENTS

ACRONYMS.....	IX
INTRODUCTION	1
PART I BACKGROUND UPDATE	3
1.0 INTRODUCTION.....	3
2.0 AMOUNT OF EACH COVERED WASTE STORED AT LANL.....	3
2.1 Mixed Low-Level Waste Inventory	3
2.2 Mixed Transuranic (MTRU) Inventory Summary	4
3.0 TREATMENT PROGRESS.....	7
3.1 Off-site Treatment.....	7
3.2 Off-site Recycling	7
3.3 Onsite Treatment and Recycling	7
3.4 Onsite Lead Decontamination	7
3.5 Treatability Studies	7
3.6 Administrative Adjustments and Corrections.....	8
3.6.1 Adjustments to MLLW Inventory.....	8
3.6.2 Adjustments to MTRU Inventory	8
4.0 TREATMENT TECHNOLOGY DEVELOPMENT	8
4.1 Treatment Technologies Being Evaluated/Developed	8
4.1.1 Off-site Commercial Treatment Facilities.....	9
4.1.2 Off-site DOE Treatment Facilities	9

INTRODUCTION

On October 6, 1992, Congress passed the Federal Facility Compliance Act (FFCA) to address compliance by the U.S. Department of Energy (DOE) with the Land Disposal Restrictions (LDR) for the storage of mixed waste set forth in Section 3004(j) of the Resource Conservation and Recovery Act (RCRA). The FFCA requires DOE to submit a Site Treatment Plan (STP) for developing treatment capacities and technologies to treat all of the facility's mixed waste, regardless of the time generated, to the standards promulgated pursuant to Section 3004(m) of the RCRA. The FFCA provides that the appropriate regulatory authority, the New Mexico Environment Department (NMED), may approve, approve with modifications, or disapprove the submittal of the STP. Prior to making such a determination, the FFCA requires NMED to provide public notice, consider public comments, and consult with the U.S. Environmental Protection Agency (EPA) and any other state in which a facility affected by the STP is located.

On October 4, 1995, NMED issued a Federal Facility Compliance Order (FFCO) to DOE and the management and operating contractor, the University of California (UC) Regents. On June 1, 2006, Los Alamos National Security, LLC (LANS) replaced UC as operating contractor of Los Alamos National Laboratory (LANL). LANS then assumed responsibility for FFCO compliance. As of November 1, 2018, Triad National Security, LLC (Triad) became the new prime contractor for DOE National Nuclear Security Administration (NNSA), replacing LANS.

On April 30, 2018, Newport News Nuclear BWXT-Los Alamos, LLC (N3B) became the prime contractor for the DOE Environmental Management Los Alamos Field Office (EM-LA), and is responsible for LANL site-wide cleanup as well as waste management and shipping of legacy STP and remediation wastes at Technical Area 54 (TA-54), Areas G and L. Per the LANS/N3B Service Agreement/Work Authorizations signed April 30, 2018, N3B became the lead contractor for FFCO compliance. ~~As of November 1, 2018, Triad National Security, LLC (Triad) became the new prime contractor for DOE National Nuclear Security Administration (NNSA), replacing LANS.~~

At present, N3B is responsible for all quarterly and annual FFCO STP reporting requirements, working closely with Triad to fulfill FFCO requirements for all LANL STP requirements. ~~For this document, LANS, instead of Triad, will be referenced for federal fiscal year 2018 (FY18). The FY19 update will reference Triad. In this update, N3B and Triad/LANS, as well as EM-LA and NNSA, will collectively be referred to as "the Respondents."~~

The FFCO requires the Respondents to implement an STP for the treatment of mixed waste at LANL. The STP is intended to fulfill the FFCA requirements and establish an enforceable framework to allow the Respondents to achieve full compliance with LDR requirements under the New Mexico Hazardous Waste Act (HWA) and RCRA. The compliance dates set forth in the STP are enforceable time periods in which Respondents are required to treat or otherwise meet the requirements set forth for LDR under the HWA and RCRA.

On March 31, 1995, DOE submitted its proposed STP, which addressed treatment capacities and technologies to treat all of LANL's mixed waste, regardless of the time it was generated, to NMED. On April 17, 1995, the public was provided an opportunity to comment to NMED on DOE's draft STP. After considering public comment and otherwise complying with the FFCA, NMED approved the draft STP with modifications on October 4, 1995.

Section VII of the FFCO requires the Respondents to submit an Annual STP Update to NMED each year on or before March 31. The FFCO requires that the Annual Update bring the information in both the Background and the Compliance Plan (CP) current to the end of the previous federal fiscal year (FY). Part I of this Annual Update constitutes the update to the Background. Part II contains the changes that

have occurred since the last Annual Update and also identifies proposed revisions and amendments to the CP. Part III incorporates the changes in Part II into the proposed CP revision (Revision ~~3029~~.0).

PART I BACKGROUND UPDATE

1.0 INTRODUCTION

The Background (Part I) provides the following information.

- The estimated volume of covered waste in storage at the end of the previous FY and anticipated to be placed in storage for the next five FYs.
- A progress report from the end of the previous federal FY describing treatment progress and treatment technology development for each treatment facility and activity scheduled in the STP.
- A description, if applicable, of current or anticipated alternative treatment technology that is being evaluated for use instead of treatment technologies or capacities identified in the STP.
- A description of DOE's funding for STP-related activities and any funding issues that may affect the schedule.
- The status of the "No-Migration Variance Petition" or any treatability variances.
- A progress report on characterization and/or treatment capabilities or plans for mixed transuranic (MTRU) waste related to the waste treatment standards, if any, for the DOE Waste Isolation Pilot Plant (WIPP) facility near Carlsbad, New Mexico.

The STP-covered waste inventory is verified during quality control activities. Inconsistencies in treatability group or volume between the original inventory and the current inventory may exist. These inconsistencies are reconciled annually with the STP update. In an effort to correct these inconsistencies and streamline the STP reporting process, the Respondents will work on incorporating the STP Report data function utilizing within the Waste Compliance and Tracking System (WCATS).

2.0 AMOUNT OF EACH COVERED WASTE STORED AT LANL

2.1 Mixed Low-Level Waste Inventory

During ~~FY18~~FY19, the STP-covered mixed low-level waste (MLLW) inventory increased from 175.033231.491 m³ (FY17FY18) to 231.491248.409 -m³ (FY19). This ~~increase -was~~increase was due to ~~N3B~~new covered waste additions of 9.02723.948 -m³ ~~plus administrative adjustments of 47.431m³.~~ There were also administrative adjustments of -4.122 -m³ and off-site disposal of -2.908 m³.

The transuranic (TRU)/MTRU recharacterization process will continue to produce 10-100 nCi/g waste (LA-W935). The TRU/MTRU recharacterization process was due to a backlog of waste as a result of previous shipping pauses, limited shipments to WIPP, and past restrictions on-site at TA-54, Area G. These restrictions delayed the final confirmation, characterization, certification, and shipment for off-site treatment and disposal of these containers. Table 2.1-1 summarizes changes to the estimated ~~FY18~~ FY19 -STP--covered MLLW inventory.

Appendix A provides the detailed changes to the ~~FY18-FY19~~ covered MLLW inventory by treatability group, which includes including the inventory at TA-54 in Appendix (Table A-1), and the inventories at TA-55, the Chemistry and Metallurgy Research (CMR) Building, and the Transuranic Waste Facility (TWF) combined in Appendix (Table A-2). Appendix B (Table B-1) lists the ~~FY18-FY19~~ MLLW shipments. Administrative adjustments to the MLLW inventory are shown in Appendix C (Table C-1). Detailed information about the administrative adjustments in Table C-1 are shown in Table C-2. The MLLW inventory reported in the ~~FY17-FY18~~ Annual Update is included as Appendix D Table D-1 for TA-54 and Table D-2 for TA-55, CMR, and TWF.

Table 2.1-1 ~~FY18-FY19~~ MLLW Inventory Summary

Contribution	Volume (m ³)- ¹
MLLW Inventory Reported in FY17 Annual Update FY18 at TA-54	175.033 204.951
MLLW Inventory Reported in FY18 at CMR/TA-55/TWF	26.540
Proposed Revision 2930.0	
N3B New-Covered Waste	9.027 20.832
Triad LANS New-Covered Waste (2.7+0.416)	58.753 3.116
N3B Administrative Adjustments	20.891 4.122
Triad LANS Administrative Adjustments	26.540
N3B Off-site Shipment Treatment	-0.208
Triad LANS Off-site Shipment Treatment	-58.753 -2.700
Off-site Treatment /Recycle	NA ¹
Onsite Decontamination	NA ¹
Treatability Study Use	NA ¹
MLLW Inventory Reported in FY18-FY19 Annual Update	231.491248.409

¹ NA = No Activity

Note: Calculations have been rounded to three places after the decimal point.

2.2 Mixed Transuranic (MTRU) Inventory Summary

During ~~FY18~~FY19, STP-covered MTRU inventories ~~increased~~decreased from approximately ~~1798.802~~1441.738 m³ to ~~1798.802~~17514.711 m³ (Table 2.2-1). This ~~increase~~decrease was due to ~~waste removed from the STP inventory of -130.596 m³ and administrative adjustments of -21.316 m³. There were also contributions with the~~ addition of new covered waste at TA-54 and TA-55, CMR, and TWF, and ~~administrative adjustments at TA-54 of 108.020 m³.~~

~~In the “Los Alamos National Laboratory Federal Facility Compliance Order Annual Site Treatment Plan Update for Fiscal Year 2017 Rev. 28.0,” the total FY17 Inventory in Appendix E, Table E-1 should have been reported as 1247.409 m³ instead of 1273.537 m³. A shipment of 26.128 m³ MTRU waste was entered in Appendix F, Table F-1, but inadvertently omitted from Appendix E, Table E-1. In this FY18 report, Appendix E, Table E-1 has been updated with the correct FY17 Annual Report Total Inventory of 1247.409 m³. The summation of Table E-1 and E-2 for the FY17 Annual Report is 1441.738 m³. Therefore, the above STP-covered MTRU inventory for FY17 of 1441.738 m³ is correct.~~

Table 2.2-1 summarizes changes to the estimated ~~FY18-FY19~~ MTRU covered waste inventory. The total volume of MTRU waste in Table 2.2-1 includes the CMR, TA-55, and TWF MTRU volumes, which are maintained in a separate inventory from the MTRU inventory at TA-54. Appendix E contains additional detail for the MTRU inventory; Table E-1 covers the TA-54 inventory and Table E-2 covers the inventory at CMR, TA-55, and TWF. The volume of STP-covered MTRU waste that is part of the “non-cemented above-ground Environmental Management (EM) Legacy TRU” (MTRU waste only) has been summarized in Appendix E-1 and Section 4.0 of the CP. Appendix F (Table F-1) provides a summary of

~~FY18-FY19~~ MTRU shipments to WIPP. In Appendix G, Tables G-1 and G-2 describe the administrative adjustments that were made to resolve differences in the TA-54 and the CMR, TA-55, and TWF MTRU inventory data, respectively. ~~STP-covered MTRU inventory increased because of the WIPP shutdown on February 14, 2014; Respondent shipments to WIPP resumed in October 2018.~~

Administrative adjustments typically represent the following types of activities:

- Respondents may correct database entries so that waste items not previously listed as STP waste are now identified and included as STP waste.
- Respondents may correct waste data, such as volume or EPA codes, through quality control activities. Under DOE Standards, waste that was formerly classified as MTRU because it had radioactivity greater than 10 nCi/g has been reclassified to MLLW (LA-W935) if its activity is less than 100 nCi/g.
- New analytical data may also require that waste streams previously managed as TRU waste should be reclassified and managed as MTRU waste.
- During repacking or other quality control activities, TRU waste may be recharacterized as MTRU waste when previously unidentified hazardous contents, such as lead, are determined to be present.
- During repacking, treatability groups are frequently reassigned to be consistent with current management and shipping criteria.
- Containers of waste are occasionally determined not to belong to mixed waste streams and are reclassified as TRU waste; removal of WIPP-prohibited items, if they are the only hazardous constituent, will result in the remaining waste being classified as nonmixed.
- Addition or removal of 85-gallon overpacks changes the volume of waste in the inventory; rounding container volumes to three decimal places also changes the inventory volume.

Table 2.2-1 Covered MTRU Inventory Summary

Description	Volume (m ³)
Covered MTRU Inventory Reported in FY17-FY18 at TA-54	+247.409 <u>1437.701</u>
Covered MTRU Inventory Reported in FY17-FY18 at TA-55/CMR/TWF	+194.329 <u>361.101</u>

Net Administrative Adjustments for TA-54 in FY18 -FY19	196,900 -21,316
This is the transfer of two -one Confinement Vessel Disposition (CVD)s in FY19 from TA-55 to CMR where it is removed from the STP (each CVD is 3.199 m ³)	-6,398 -3,199
Covered MTRU Inventory at End of FY18FY19	1798,8021751,711

* Volume not to be subtracted from the STP inventory. Removal of this waste from STP inventory is on hold until NMED approval is received.
 Note: Calculations have been rounded to three places after the decimal point.

Appendix G includes administrative adjustment changes to the MTRU waste inventory that resulted from repacking activities. MTRU waste volumes in the STP inventory reflect the volume of the container rather than the volume of the contents. When containers are repacked, the STP inventory volume of any given treatability group may either increase or decrease. When a container is repacked, the contents are sometimes split into two or more new containers to meet shipping and waste acceptance criteria or to meet characterization criteria (e.g., nondestructive analysis calibration limits). In addition, the new containers may be assigned to different treatability groups depending on the contents of each drum. Therefore, the volume of a single drum may increase into more volume than the original container. For example, repacking one container of *Cemented Sludge* (0.208 m³) may result in one drum of *Combined Combustible-Noncombustible Waste* (0.208 m³) and one drum of *Noncombustible Waste* (0.208 m³). In addition, changes in the waste volume in the STP inventory occur when an 85-gallon ‘overpack’ is removed from, or added to, a 55-gallon drum during repackaging. Removal of overpacks decreases the volume of waste in the STP inventory. Adding an overpack to a 55-gallon drum increases the volume of waste shown in the STP inventory.

3.0 TREATMENT PROGRESS

3.1 Off-site Treatment

During FY198, covered MLLW stream were shipped for treatment and/or disposal to the following off-site commercial treatment facilities: Perma-Fix Florida, Waste Control Specialists, and Energy Solutions. See Appendix H, Table H-1 for ~~commercial~~commercial facilities contacted for waste treatment capabilities. Appendix B summarizes LANL’s off-site shipments for treatment and/or disposal of covered MLLW in ~~FY18~~FY19.

3.2 Off-site Recycling

Respondents did not recycle any STP-covered waste off-site in ~~FY18~~FY19.

3.3 Onsite Treatment and Recycling

Respondents did not treat or recycle any STP-covered waste on-site in ~~FY18~~FY19.

3.4 Onsite Lead Decontamination

No LANL STP-covered waste was decontaminated on-site during ~~FY18~~FY19.

3.5 Treatability Studies

Respondents conducted no treatability studies in ~~FY18~~FY19.

3.6 Administrative Adjustments and Corrections

Administrative adjustments and corrections are due to discrepancies found during quality control activities related to preparing waste for treatment, inventory, and disposal or when preparing the STP Annual Update. A data quality review is conducted annually to compare shipment notifications and shipping manifests with database updates.

3.6.1 Adjustments to MLLW Inventory

Appendix C (Table C-1) details the administrative adjustments to the MLLW inventory. The principal adjustment reflects the transfer of MTRU waste to MLLW (LA-W935, 10-100 nCi/g). A substantial volume of LANL's STP-covered MTRU waste has been determined to no longer meet the criteria for TRU waste and has been reclassified as MLLW. If previously unidentified hazardous waste constituents, such as lead, are revealed during repacking or other quality control activities, low-level waste (LLW) may be recharacterized as MLLW. (Appendices C and G).

3.6.2 Adjustments to MTRU Inventory

During the preparation of the FY18-FY19 STP Annual Update, Respondents identified a number of adjustments to the MTRU inventory volume (Appendix G, Tables G-1 and G-2), including additions of newly identified STP-covered waste, recharacterization of waste, and reclassification of MTRU waste to MLLW. Other adjustments were needed to account for volume changes due to repacking of waste and transfers of waste from one treatability group to another or to correct database entries.

4.0 TREATMENT TECHNOLOGY DEVELOPMENT

During FY198, the availability of commercial and federal facility off-site treatment and disposal capacity for MLLW remained stable. As a result of DOE's increasing reliance on commercial treatment and disposal for mixed wastes, nearly all funding for on-site technology development has been prioritized to support off-site treatment and disposal of mixed wastes. DOE treatment technology development initiatives are generally limited to specific technologies or technology adaptations in response to specific needs that cannot be addressed through commercial facilities.

4.1 Treatment Technologies Being Evaluated/Developed

Respondents continue to monitor the development of potential treatment technologies that may become available in the future. Some of these technologies are being developed at LANL and at other DOE sites. Respondents developed a treatment method to address the type of TRU waste associated with the February 14, 2014, release of radioactivity at WIPP. The treatment process was approved and was utilized to address remediated nitrate salt and above ground unremediated nitrate salt waste in 2017 and 2018, as required by the January 22, 2016, Settlement Agreement and Stipulated Final Order, 14-20 (CO) between DOE/LANS and NMED's Hazardous Waste Bureau (HWB).

~~Respondents continue to monitor the development of other potential treatment technologies that may become available in the future. Some of these technologies are being developed at LANL and at other DOE sites. Respondents are currently developing treatment technologies to address the type of TRU waste associated with the February 14, 2014, release of radioactivity at WIPP. The treatment process is specifically intended to address remaining remediated nitrate salt, unremediated nitrate salt, and dewatered liquids from cemented nitrate salt wastes remaining at LANL, as required by the January 22, 2016 Settlement Agreement and Stipulated Final Order, 14-20 (CO) between DOE/LANS and NMED's Hazardous Waste Bureau (HWB).~~

~~Respondents re-evaluated all nitrate salt bearing TRU waste and determined the three types of waste located at LANL that will require treatment prior to acceptance at WIPP. Methods were developed for~~

~~treatment of these wastes through the use of surrogates for the waste and both on-site and off-site testing facilities. These methods were evaluated for treatment effectiveness. After confirmation of the treatment process for these wastes, permitted on-site treatment was requested from the NMED-HWB and was granted in July 2016. Treatment for remediated nitrate salt-bearing wastes was conducted between May 2017 and November 2017. Treatment for unremediated nitrate salt-bearing wastes was conducted between December 2017 and March 2018.~~

4.1.1 Off-site Commercial Treatment Facilities

Respondents continue to monitor the availability and capabilities of off-site commercial facilities for treatment technologies and permitting that are appropriate to LANL waste. These facilities are listed in Appendix H (Table H-1).

4.1.2 Off-site DOE Treatment Facilities

Respondents continue to monitor the availability and capabilities of off-site DOE facilities for treatment technologies and permitting that are appropriate to LANL waste.

5.0 DOE FUNDING FOR STP-RELATED ACTIVITIES

Funding to implement the LANL STP for mixed waste during FY198 was sufficient to meet all compliance dates as required by the CP of the STP. ~~However, DOE/LANS shipments were on hold while DOE/LANS addressed safety basis concerns at WIPP and LANL; DOE/N3B shipments continued as scheduled.~~ FY198 funding is available to support all compliance dates established in the STP. Should funding reductions occur that would affect STP compliance dates, DOE will notify NMED to address compliance schedules and activities.

6.0 TREATMENT VARIANCES

RCRA allows certain case-by-case variances from LDR standards. Variances that may be sought under RCRA relate to requests for substitution of an alternative treatment technology in place of the LDR-- required treatment technology. This section discusses any potential treatment variances related to LANL's covered waste, as described below.

6.1 WIPP No-Migration Variance Petition/Land Withdrawal Act Amendments

WIPP, located near Carlsbad, New Mexico, is a DOE repository for TRU waste generated by the nation's defense-related activities. Some of the TRU waste contains hazardous waste constituents regulated under the RCRA.

The WIPP repository is ~~considered to be~~ a deep geologic repository rather than a shallow landfill. It is wholly sited 2,100 ft below the land surface in a salt bed. Because salt has the advantageous characteristic of slow plastic deformation, it is predicted that the salt will entomb the waste and seal it from the human environment, making potential release of hazardous constituents a low-probability event.

The WIPP Land Withdrawal Act Amendments of 1996 (LWAA) (Public Law 104-201, Section 3188) exempted waste designated by the Secretary of Energy for disposal at WIPP from RCRA's LDRs. Following passage of the LWAA, the EPA terminated its review of the No-Migration Variance Petition submitted by DOE to EPA in May 1995. EPA formalized its withdrawal by letter to George Dials, DOE/Carlsbad Area Office Manager, dated December 29, 1997.

On October 29, 1996, DOE submitted its Compliance Certification Application (CCA) to EPA. The CCA is intended to demonstrate to EPA that WIPP meets the requirements of Title 40 of the Code of Federal Regulations (40 CFR) Part 191 and 40 CFR Part 194. On October 23, 1997, EPA announced its proposed

decision to issue a Certification of Compliance, subject to a number of specified conditions, and to a public comment period of 120 days. On May 18, 1998, EPA published in the Federal Register (63 FR 27354) its final rule certifying that WIPP will comply with the requirements of Subparts B and C of 40 CFR Part 191 and amending the WIPP compliance criteria in 40 CFR Part 194. The final rule became effective June 17, 1998. On March 25, 1999, WIPP received its first shipment of non-mixed (radioactive only) TRU waste from LANL. Other facilities have also shipped non-mixed TRU waste to WIPP. NMED issued a hazardous waste permit for WIPP on October 27, 1999, authorizing DOE to manage, store, and dispose of contact-handled MTRU waste at the facility.

6.2 Other Treatment Variance(s)

No treatment variances were requested or granted in FY198.

7.0 WIPP FACILITY CAPABILITIES

As discussed above, DOE is disposing of its defense TRU waste, both mixed and nonhazardous, in its deep geologic repository at the WIPP near Carlsbad, New Mexico. This facility is a receiving and disposal facility without the capability of routinely opening and repackaging waste. TRU waste will already be containerized when received at the WIPP. The WIPP is not a generator of TRU waste, and, therefore, will receive all waste in shipments from off-site DOE facilities. In February 2014, NMED received notice of a release at the WIPP nuclear waste repository. A LANL container sent to WIPP experienced an energetic chemical reaction that ultimately led to the release of radioactive material. In light of these events, and the potential need to re-remediate all nitrate salt-bearing waste, NMED determined that the removal of MTRU from the STP be deferred until more information became available; NMED also determined that the remaining abovegrade waste stored at the Waste Control Specialists, LLC (WCS) facility and WIPP ~~remained above grade and would~~ was not be returned to LANL until approval to relocate below grade was obtained. All shipments of MTRU covered waste inventory to WIPP were suspended between May 2014 and July 2018, due to the WIPP shutdown. WIPP resumed operations in July 2018.

7.1 Characterization Capabilities at WIPP

Wastes proposed for shipment to WIPP are characterized and certified at LANL by the Central Characterization Project, a contractor to DOE's Carlsbad Field Office.

7.2 MTRU Treatment Capabilities and Plans

WIPP is not required to treat MTRU waste to meet the LDR standards. As described above in Section 6.1, the LWAA exempted wastes designated by the Secretary of Energy for disposal at the WIPP from this requirement.

PART II COMPLIANCE PLAN UPDATE

1.0 INTRODUCTION

This update to the CP contains:

- Changes to the CP occurring since the previous Annual Update, including:
 - correspondence, including notices of shipments; and
 - new-covered and deleted waste;
- Proposed revisions and amendments, including:
 - compliance date changes;
 - description of waste deleted in accordance with the requirements in FFCO Section IX, *Deletion of Waste*;
 - documentation of new-covered waste in accordance with the requirements in Section VIII, *Addition of New Covered Waste*; and
 - proposed changes to the overall schedule in the CP.

2.0 CHANGES AND REVISIONS TO THE CP OCCURRING SINCE THE PREVIOUS ANNUAL UPDATE

This section describes revisions, amendments, or other changes to the LANL CP.

2.1 Activities Completed During FY198

During FY198, no CP Activity milestones were scheduled.

2.2 Expedited Shipment Letters

Expedited shipment letters are listed in Appendix I, Table I-1.

2.3 Correspondence

Between October 1, 2018.7 and September 30, 20198, Respondents communicated with NMED on issues related to the following:

- FY198 waste shipment notifications;
- FY198 expedited waste shipment notifications;

This correspondence is listed in Appendix I (Tables I-2 and I-3). Previously listed correspondence can be found in the previous FY Annual Reports.

3.0 DESCRIPTION OF DELETED WASTE

A proposal for deletion of STP waste items is included with this update as Proposed Revision 3029.0 in accordance with FFCO Section IX, *Deletion of Waste*. These deletions are proposed because the wastes were shipped off-site for treatment, disposal, or recycling or were otherwise determined not to be mixed wastes. These covered wastes are included in Appendix B, Appendix F, and Appendix G.

4.0 DOCUMENTATION OF NEW-COVERED WASTE

A proposal for addition of STP waste items is included with this update in accordance with FFCO Section VIII, *Addition of Waste*. These additions consist of wastes placed in storage during FY187 and were proposed to become covered wastes in FY198. These covered wastes are included in Appendixes A and E. Addition of new-covered and newly characterized as MTRU waste to be added to the STP is identified in Section 6.1.

5.0 PROPOSED CHANGES TO THE COMPLIANCE PLAN SCHEDULE

Funding to implement the LANL STP for mixed waste during FY198 was sufficient to meet all compliance dates as required by the CP of the STP. ~~However, DOE/LANS shipments were on hold while DOE/LANS addressed safety basis concerns at WIPP and LANL. DOE/N3B shipments continued as scheduled.~~ FY198 funding is available to support all compliance dates established in the STP. Should funding reductions occur that would affect STP compliance dates, Respondents will notify NMED to address compliance schedules and activities.

DOE/Triad is proposing to revise the following two milestones: (1) Activity Table 3.2-3(A) to “complete shipping of wastes to an off-site treatment facility, or submit documentation assigning waste items to applicable treatability groups or complete parallel option” refers to the treatment and disposal of the four flanged tritium waste containers (FTWCs) and (2) Activity Table 4.0-2(B) to “complete transfer of Metallic Waste (CVD) to CMR for material retrieval.”

DOE/Triad expects to be able to complete the treatment and disposal of the FTWCs by September 29, 2021, and the transfer of the last Confinement Vessel Disposition (CVD) to CMR for material retrieval by October 31, 2021.

I. Compliance Dates and Waste Description

Activity Table 3.2-3(A): The four FTWCs are waste composed of molecular sieves and squib assemblies containing lead with very high tritium. The Permittees intended to complete the project within 180 days after the approval of the “Temporary Authorization Waste Treatment, Storage, and Repackaging of Flanged Tritium Waste Containers” (Temporary Authorization: LA-UR-19-24513, submitted to NMED on June 18, 2019) by NMED. The fifth container of mercury and tritium contaminated cryotrap, originating from experimental activities at the Ion Beam Facility, is presently situated in the same location as the four FTWCs containers. Because of the presence of elemental mercury in the fifth container, sorting and segregation as described in the Temporary Authorization is not appropriate for this waste. This waste is also under the same compliance date of September 29, 2020, as the FTWCs, but this container will require further discussion and planning toward options for a path forward that has not been acted on to -date. Therefore, the fifth container (cryotrap waste) will also be included in the FTWCs extension request.

Current compliance date: September 29, 2020.

Proposed Revision 30.0 compliance date: September 29, 2021.

Activity Table 4.0-2(B): The CVD project involves the recovery of materials and waste from confinement vessels stored at TA-55. The vessels contain important programmatic materials that can be recovered and used in current DOE National Security programs. The tenth CVD was not of the same design as the previous nine CVDs and therefore the CMR’s current documented safety analysis (DSA) would need to be updated to accommodate the design change for the tenth CVD.

Current compliance date: October 31, 2020.

Proposed Revision 30.0 compliance date: October 31, 2021.

II. Disposal/Recovery/Treatment Process

Activity Table 3.2-3(A): The four FTWCs need to be vented at TA-54 and processed at the Weapons Engineering Tritium Facility (WETF) under the Temporary Authorization. The FTWCs require treatment by venting, storage, sorting, segregation and repackaging. The Temporary Authorization allowed these activities to be performed in appropriate locations to ensure the FTWCs can be safely processed and shipped to an off-site treatment, storage, and disposal facility.

Activity Table 4.0-2(B): Presently, LANL's inventory of CVD waste consists of one remaining container with a volume of 3.199 m³ located at TA-55. -The description of the treatment process for this waste was described in the "Execution of the Bolas Grande Project at Los Alamos National Laboratory" which was attached to the letter sent to NMED on September 8, 2009; (ENV-RRO-09-061). NMED's approval letter was dated December 4, 2009, LANL-09-050. The approved method includes brushing and vacuuming used to remove radiologically contaminated materials and wastes from the interior surfaces of the confinement vessels. The project involved performing the following steps on each vessel: (1) emptying the vessel of its contents, (2) sorting and segregating the programmatically valuable material from the other material in the vessel, (3) decontaminating the vessel to LLW levels if technically possible, and (4) dispositioning the removed waste and the emptied vessel in accordance with current radioactive and hazardous waste regulatory requirements. The project is being executed in the CMR Building at LANL. The most efficient and reliable method for disposal of the cleaned-out vessels is size reduction and disposal as TRU waste. Once the DSA has been approved, CMR will have to re-evaluate their operations according to the design of the tenth CVD in order to process this item through the material recovery reprocessing project. Once the tenth CVD is transported from TA-55 to the CMR, it will be removed from the STP because it will no longer be considered waste and will be considered as material for the recovery project.

III. Justification for Milestone Extension

Activity Table 3.2-3(A): As the four FTWCs need to be vented at TA-54 and processed at the WETF under the Temporary Authorization within 180 days, this activity was placed on hold as of March 24, 2020. Triad has reduced its number of staff to a minimum safe and secure working status due to the COVID-19 stay-at-home order promulgated by the Governor of New Mexico.

Activity Table 4.0-2(B): The tenth CVD is designed differently compared with the previous nine CVDs. The previous -nine CVDs have been sent to the CMR and processed through the material recovery reprocessing project. Specifically, the tenth CVD ports are significantly different from the other nine, which will drive LANL to re-evaluate the processing operations at the CMR.

Because of the different design port features of the tenth CVD, a new safety basis evaluation needed to be done. The design features of the tenth CVD required

- new scope and sequence of planned operations,
- assumptions about the characteristics of the tenth sphere (its similarities with previous CVD evolutions),
- preliminary hazard analysis strategies,
- potential technical safety requirement changes, and

- potential strategies for how to prepare and format the safety basis changes for submittal to the NNSA.

The transport of the tenth CVD to the CMR is on hold until further notice due to the New Mexico State COVID stay-at-home restriction order enacted on March 24, 2020. Triad has implemented this order and changed facility operations from normal to "limited operations" resulting in only approved essential staff on-site performing critical mission work. In addition to the prerequisite processes mentioned in the bullets above, a change to the CMR's safety basis DSA must be completed prior to CMR receiving the tenth CVD.

No other changes to the schedule in the CP of the STP are proposed.

6.0 DETAILED DESCRIPTION OF THE PROPOSED REVISION

The purpose of this revision request is to reflect changes in the STP inventories in the LANL CP of the STP in accordance with FFCO Section X.C.2.a. The changes proposed by this revision to the CP will allow the added covered wastes to be treated or otherwise managed in accordance with the Activities and Compliance Dates pertaining to each treatability group, as adopted or revised herein. The CP text changes are indicated in the redlined version provided to NMED.

Respondents are proposing to revise the CP text to reflect the following change in STP-covered inventories:

- Increases and decreases in covered mixed waste inventories due to the addition of new-covered waste and off-site shipments during ~~FY18-FY19~~ and other changes in the STP inventory.
- On July 10, 2019, a letter (EPC-DO:19-226, LA-UR-19-25967) was sent to NMED requesting an extension of compliance dates for Activity Table 3.2-3 (A) from September 29, 2019, to September 29, 2020. The notification for this request is noted in the FY18 STP Annual Report, although the extension request occurred in FY19. The requested milestone extension is based on the proposed activities for the four FTWCs that are described in the Temporary Authorization.

The CP changes are proposed in accordance with the applicable requirements in the FFCO, as amended: Section VIII, *Addition of New Covered Waste*; Section X.B.4, *Revisions*; and Section XI, *Deletion of Waste*.

6.1 Addition of New Covered¹ Waste

Respondents are requesting that the following waste be added to the STP as covered waste.

6.1.1 MLLW Additions

The total volume of MLLW requested for addition as "new covered" is ~~67.78023.948~~ m³ (Table 6.1.1-1).

Table 6.1.1-1 Proposed Addition of New-Covered MLLW Waste

CP Section	MWIR ¹ Waste ID	Treatability Group	Volume (m ³)
3.1.2	LA-W904	Soil with Heavy Metals	0.076
3.1.5	LA-W921	Activated or Inseparable Lead (Triad)	51.2162.700
3.1.11	LA-W907	Halogenated Organic Liquids	0.208
3.3.4	LA-W935	10–100 nCi/g Waste (Triad)	7.2530.416
3.3.4	LA-W935	10–100 nCi/g Waste (N3B)	9.02720.832
Total			67.78023.948

¹MWIR is Mixed Waste Inventory Report

6.1.2 MTRU Waste Additions

The volume of new covered MTRU waste requested for addition is ~~216.098~~108.020 m³ (Table 6.1.2-1). Table 6.1.2-2 identifies waste that is proposed for addition following activities that identified waste in the TRU inventory as MTRU either through review of waste characteristics or as a result of identifying potentially hazardous constituents during repacking TRU waste.

Table 6.1.2-1 Proposed Addition of New-Covered¹ MTRU Waste at TA-54, TA-55, CMR, and TWF

CP Section	Treatability Group	Volume (m ³)
4.0	TA-54 Cemented Sludge Waste	3.328
4.0	TA-54 Combustible – Noncombustible Waste	42.72030.824
4.0	TA-54 Noncombustible Waste	0.2081.900
4.0	TA-54 Solidified Inorganic Noncombustible Waste	0.624
Total TA-54 New Covered Waste		42.92836.676
4.0	CMR Combustible Noncombustible Waste S5400	6.260
4.0	CMR Combustible Noncombustible Organic Debris Waste S5300	0.208
4.0	TA-55 Combustible-Noncombustible Waste S5400	103.66443.056
4.0	TA-55 Combustible Waste S5300	19.9821.248
4.0	TA-55 Noncombustible Waste S3100	11.6485.200
4.0	TA-55 Metallic Waste S5100	0.416
4.0	TA-55 Combustible Noncombustible Waste S5900	0.208
4.0	TWF Combustible-Noncombustible Waste S5400	25.16821.840
4.0	TWF Combustible Waste S5300	5.616
Total CMR/TA-55/TWF New Covered Waste		173.17071.344
Total New Covered Waste		216.098108.020

¹ Waste generated during the previous FY that was not shipped off-site within one year is termed new covered STP waste.

Table 6.1.2-2 Proposed Addition of Waste Newly Characterized as MTRU

CP Section	Treatability Group	Volume (m ³)
4.0	Combustible-Noncombustible Waste (identification of potentially hazardous constituents based on investigation of characterization of TRU nitrate salt waste, debris containers with aerosol cans, and empty containers not meeting the RCRA empty criteria.)	0.00
4.0	Solidified Inorganic and Organic Waste (identification of potentially hazardous constituents based on investigation and characterization of TRU nitrate salt waste, cemented containers with free liquids, and empty containers not meeting the RCRA empty criteria.)	0.00
	Total Newly-Characterized MTRU	0.00

6.2 Deletion of Covered Waste

MLLW ~~and MTRU wastes were~~ is shipped off-site for treatment and/or disposal, ~~or recycling,~~ or are otherwise proposed as deleted waste. ~~and MTRU is shipped to WIPP for disposal.~~

6.2.1 Deletion of MLLW

Respondents are requesting that the covered MLLW identified in Appendix B be deleted from the STP. These covered waste were shipped off-site for treatment and disposal or recycling. The total volume of covered MLLW that is requested for deletion under this revision to the CP is ~~58.7532.908~~ m³ (Appendix B, Table B-1).

6.2.2 Deletion of MTRU Waste

Respondents are requesting that the covered MTRU waste identified in Appendix F be deleted from the STP. These covered wastes from N3B and Triad were shipped off-site from WCS to WIPP for ~~treatment~~ and disposal. The total volume covered MTRU that is requested for deletion from inventory under this revision to the CP is ~~49.536~~ 130.596 m³ (Appendix F, Table F-1).

6.2.3 Other Deletions of ~~FY18-FY19~~ Waste

No waste is proposed for deletion due to recycling or on-site treatment in ~~FY18~~ FY19. No waste was shipped off-site for treatability studies.

6.3 Adjustments to the Original (October 4, 1995) STP-Covered MLLW Inventory

Respondents are requesting adjustments to the original (October 4, 1995) STP-covered MLLW inventory as listed in Appendix C (Table C-1). Most administrative adjustments are due to reclassification of MTRU waste to MLLW treatability groups and to quality control activities related to preparing waste for treatment and disposal. These adjustments may result in additions of newly identified covered waste or transfers of waste to other treatability groups.

6.4 Adjustments to MTRU Waste Inventory

Respondents are requesting adjustments (Appendix G, Tables G-1 and G-2) to the original (October 4, 1995) STP-covered MTRU waste inventory. Most administrative adjustments are due to reclassification of MTRU waste to MLLW treatability groups or to other MTRU treatability groups and to reclassification of TRU to MTRU as a result of quality control activities related to preparing waste for treatment and disposal. These adjustments may result in additions of newly identified covered waste or transfers of waste to other treatability groups.

6.5 Establishment of New Milestone Activity Dates

Respondents are not requesting any new compliance milestones.

6.6 Additional Revisions

No other revisions are requested.

7.0 RATIONALE FOR THE PROPOSED REVISION

This information is provided in accordance with FFCO Section X.C.2.a.

7.1 Establishment of New Proposed Milestone

~~No new milestones are proposed. DOE/Triad is proposing to revise two milestones: (1) Activity Table 3.2-3(A) to “complete shipping of wastes to an off-site treatment facility, or submit documentation assigning waste items to applicable treatability groups or complete parallel option” refers to the treatment and disposal of the four FTWCs and (2) Activity Table 4.0-2(B) to “complete transfer of Metallic Waste (CVD) to CMR for material retrieval.” Refer to Part II, Section 5.0.~~

7.2 Addition of New-Covered Waste

Waste that was newly generated in FY18, which was not treated within 12 months of generation, became new-covered waste during FY198. In addition, TRU wastes, re-evaluated during repacking and quality control activities as having previously unidentified RCRA constituents, were also added to the STP inventory (Appendix G). Approval of these proposed additions to the STP inventory will allow the added covered wastes to be treated or otherwise managed in accordance with the activities and compliance dates pertaining to each treatability group, as adopted or revised herein.

7.3 Deletion of Covered Waste

Decreases in covered waste inventory reflect the treatment and disposal or recycling of covered waste at off-site commercial facilities during FY198. Deletion of this covered waste is proposed to more accurately reflect the LANL STP inventory as of the end of FY198.

7.4 Adjustments to the Original (October 4, 1995) STP-Covered Waste Inventory

Administrative adjustments result from quality control activities related to preparing waste for treatment and disposal. These adjustments result in additions of newly identified covered waste and transfers of waste to other treatability groups. The adjustments to the original (October 4, 1995) STP-covered waste inventory are proposed to more accurately reflect the LANL STP inventory as of the end of FY198.

8.0 ANTICIPATED LENGTH OF ANY DELAY IN PERFORMANCE

In accordance with FFCO Section X.C.2.c, Respondents cannot confidently predict the anticipated delay in performance for shipping covered STP MTRU waste for which the only currently allowed deletion pathway is disposal at WIPP. ~~All shipments of MTRU covered waste inventory off-site were suspended in May 2014 due to the WIPP shutdown. Respondents resumed shipment of MTRU waste in October 2018.~~

9.0 PLAN AND SCHEDULE FOR IMPLEMENTING ALL REASONABLE MEASURES

All other measures proposed could be implemented within the framework of the existing plan and schedule for the STP (FFCO Section X.C.2.d).

PART III COMPLIANCE PLAN – PROPOSED REVISION 3029.0

1.0 PURPOSE AND SCOPE OF THE COMPLIANCE PLAN

1.1 Introduction

Part III of this document identifies changes that require NMED approval as a revision under Section X, *Revisions*, or an amendment under Section XI, *Other Amendments to the STP*.

The CP includes a schedule for off-site transportation for treatment, or completion of parallel options as defined in each Treatability Group Section, and the treatment of mixed wastes in full compliance with the HWA and the implementing regulations at 20 New Mexico Administrative Code (NMAC) 4.1, that incorporates by reference 40 CFR Parts 260 through 270. Part I, Background, contains progress reports as required in the FFCO. Respondents shall carry out the activities described in the STP, including the CP, in accordance with the schedules and requirements set forth in the STP and the FFCO.

1.2 STP Revisions and Amendments

The STP CP has been modified several times since it was originally issued, in accordance with the provisions of Section X, *Revisions*, and Section XI, *Other Amendments to the STP*, of the October 4, 1995, FFCO, as amended and revised. The history of revisions is provided in Appendix J.

2.0 COMPLIANCE SCHEDULES

The STP provides overall schedules for achieving compliance with LDR storage and treatment requirements for mixed waste at LANL. The schedules include those activities required to process backlogged and currently generated waste and include schedules required to establish an overall timeframe for achieving compliance with the LDR requirements under the HWA and 20 NMAC 4.1.

2.1 Categories of Activities for Compliance Dates

The categories of activities for which compliance dates will be provided for different types of treatment approaches in the STP are listed in the tables below. The categories of activities are based on Section 3021(b)(1)(B)(i), (ii), and (iii) of the RCRA, to the extent appropriate.

2.1.1 Plans Where Treatment Technology Exists

For most of the mixed waste, treatment technologies were identified and developed. For the waste that will be treated on-site, the categories of activities for compliance dates identified in Table 2.1.1-1 shall apply.

Table 2.1.1-1 Categories of Activities for Compliance for Mixed Waste with Existing Treatment Technologies

- | | |
|----|---|
| A. | Submit permit applications to NMED. |
| B. | Initiate construction as specified in the NMED permit. |
| C. | Complete system testing and commence operation. |
| D. | Begin treating mixed waste. |
| E. | Complete treatment of existing wastes to applicable regulatory standards. |

2.1.2 Plans Where Technology Must Be Developed

For some mixed waste, no treatment technologies were identified and developed, or the treatment technology must be modified or adapted to apply to such waste. For the waste that will be treated on-site, the categories of activities for compliance dates are identified in Table 2.1.2-1 and shall apply.

Table 2.1.2-1 Categories of Activities for Compliance Dates for Mixed Waste Without Existing Treatment Technologies

A.	Identify and develop technology.
B.	Submit permit application to NMED; or
C.	Submit a Notification of Intent to perform treatability study to NMED a minimum of 45 days prior to commencement of the study.
D.	Initiate construction as specified in the NMED permit.
E.	Commence systems testing.
F.	Begin treating mixed waste.
G.	Complete treatment of existing wastes to applicable regulatory standards.

2.2 Primary Preferred Treatment

Off-site treatment at a commercial or noncommercial mixed waste treatment facility is the primary preferred treatment option applicable to all mixed waste streams in the STP inventory unless otherwise indicated in the descriptions of individual waste treatability groups. DOE may also pursue parallel treatment options, such as recycling/re-use or radiological decontamination. Requirements for waste shipped off-site for recycling are discussed under Part III, Section 2.6. All activities and compliance dates related to the construction, permitting, and operation of on-site treatment skids were removed from this document. This change was due to the increased availability of off-site treatment and disposal capacity for mixed waste. Respondents will continue evaluating new commercial and DOE off-site treatment facilities as potential options for managing mixed waste, as they become available.

2.3 Plans for Mixed Waste to be Shipped Off-site for Treatment

Should Respondents decide to treat or recycle waste at a commercial off-site facility (Table 2.3-1), Respondents will notify the NMED ~~Project~~STP Manager in writing as soon as possible and in any event within 45 working days of receipt of waste at the treatment/recycling facility.

Table 2.3-1 Activities for Off-site Shipment for Treatment or Recycling at a Commercial Facility

A.	Meet all regulatory requirements for shipment.
B.	Provide documentation to NMED that waste has been received at an off-site facility for treatment or recycling within 45 working days of receipt of waste at the treatment facility.

DOE shall notify the NMED ~~STP~~Project Manager in writing as soon as possible if mixed waste is planned to be sent to a noncommercial facility. Notification should be made if possible when DOE is first considering such an option to allow NMED and the state to address any state issues or concerns with other states. The NMED ~~STP~~Project Manager shall approve in writing the proposed off-site noncommercial treatment option proposed by DOE prior to any shipment by DOE. DOE will notify the NMED ~~STP~~Project Manager in writing as soon as possible and in any event within 45 working days of receipt of waste at the treatment/recycling facility. Activities for mixed waste to be shipped off-site for treatment/recycling at a noncommercial facility are identified in Table 2.3-2.

Table 2.3-2 *Activities for Shipment Off-site for Treatment or Recycling at a Noncommercial Facility*

A.	Request necessary approval from NMED for shipment of waste by category before shipping.
B.	Meet all regulatory requirements for off-site shipment.
C.	Provide documentation to NMED of confirmation of shipment date within 14 working days prior to sending waste to an off-site facility for treatment, disposal , or recycling, or storage pending treatment, disposal , or recycling.
D.	Provide documentation to NMED that waste has been received at an off-site facility for treatment within 45 working days of receipt of waste at the off-site facility.
E.	Meet all regulatory requirements to include RCRA Permit modifications for residual or newly generated waste streams after treatment or recycling.
F.	Provide documentation to NMED within 30 working days after receipt of residual or newly generated waste streams upon return to LANL.

2.3.1 Specific Site Requirements for Noncommercial Treatment Facilities

Shipment to Idaho National Laboratory

Prior to shipment, Idaho National Laboratory (INL) and Idaho Division of Environmental Quality shall be notified of any pending shipments of waste should DOE ship MLLW to INL. Proper procedures including additional approvals (if necessary) and documentation shall be completed prior to the shipment of wastes to INL. Management of post-treatment waste residuals or newly generated waste streams will be in accordance with the requirements of DOE, the State of Idaho, and that state where they will be disposed. A modification to LANL's RCRA permit providing for the return of such wastes and/or residues to LANL must be approved by NMED prior to any such return of wastes and/or residuals to LANL. DOE will notify the NMED Project Manager in writing as soon as possible and in any event within 30 working days after receipt of shipment of treatment residuals or newly generated waste streams from INL.

Shipments of MLLW to planned facilities (not yet existing) will occur only after treatment and schedules are approved by the DOE Idaho Field Office and the State of Idaho. Upon approval of the planned treatment facilities, the applicable protocol from the paragraph above will be implemented for mixed wastes to be treated at planned facilities.

Shipment to Oak Ridge Reservation

If Oak Ridge Reservation cannot dispose of mixed-waste residues or new waste streams generated from off-site treatment, and they cannot be sent to another facility for disposal, then the residues may return to LANL. Should residual or newly generated waste streams be returned to LANL, the proper permits for the State of New Mexico must exist. DOE will notify the NMED Project Manager in writing as soon as possible and in any event within 30 working days after receipt of shipment of treatment residuals or newly generated waste streams from the Oak Ridge Reservation.

2.4 Requirements Pertaining to Radionuclide Separation

The FFCA sets additional requirements in cases where DOE intends to conduct radionuclide separation of mixed waste. Should DOE determine to do radionuclide separation of such mixed waste, DOE will schedule specific compliance dates based on category activities identified in Table 2.4-1. "Radionuclide separation" shall mean segregating the radioactive portion of the mixed waste from the hazardous portion of the mixed waste.

Table 2.4-1 Activities for Radionuclide Separation

A.	Complete an estimate of the volume of waste generated by each case of radionuclide separation.
B.	Complete an estimate of the volume of waste that would exist or be generated without radionuclide separation.
C.	Complete an estimate of the costs of waste treatment and disposal if radionuclide separation is used compared with the estimated costs if it is not used.
D.	Provide the assumptions underlying such estimates of waste volumes and cost estimates.
E.	Provide characterization methodologies for determining waste type.
F.	Submit a plan for treating or managing hazardous waste residues, accompanied by an NMED permit application.

2.5 Plans Related to Other Mixed Waste Activities

Activities other than the types of activities specifically called for in the FFCA as requiring schedules are described in this STP. Some of these activities may be associated with schedules that may contain compliance dates related to treatment of DOE's mixed waste.

For mixed waste, which is not sufficiently characterized to allow identification of appropriate treatment, notification of the characterization of such waste shall be in accordance with the annual update process described in the FFCO. If such characterization results in the addition or deletion of a treatability group or an increase in volume in a treatability group, a revision would be required pursuant to Section X of the FFCO.

Respondents will notify NMED when off-site treatability studies are conducted on STP waste. Treatability studies are used to explore alternative treatment options that may be practical for any or all of the STP mixed waste streams. When preparing waste for shipment for an off-site treatability study, Respondents will evaluate the potential for incidental waste treatment or secondary waste generation, which are often associated with treatability studies.

2.6 Recycling/Re-Use

Respondents will pursue on-site or off-site recycling/re-use as a parallel preferred option.

Should DOE elect to use recycling facilities in lieu of (or in combination with) treatment, it will follow requirements as if the waste were shipped off-site for treatment. Any and all requirements by the recycling facility and all state, federal, or other regulatory requirements applicable at the recycling site shall be met by Respondents.

Respondents shall notify the NMED ~~Project-STP~~ Manager in writing as soon as possible if mixed waste is planned to be sent to an off-site noncommercial recycling facility. Notification should be made if possible when DOE is first considering such an option to allow NMED and the state to address any state issues or concerns with other states. The NMED ~~Project-STP~~ Manager shall approve in writing the proposed off-site noncommercial recycling option prior to any shipment by Respondents. Respondents will notify the NMED ~~Project-STP~~ Manager in writing as soon as possible and in any event within 45 working days of receipt of waste at the recycling facility. Activities for mixed waste to be recycled are identified in Table 2.6-1.

Table 2.6-1 Requirements for Recycling

A.	Meet all regulatory requirements for recycling/re-use.
B.	Provide documentation to NMED that waste has been received within 45 working days of receipt of waste at the recycling facility.

Should DOE elect to use recycling/re-use facilities in lieu of (or in combination with) treatment, it will follow the requirements as if the waste were shipped off-site for treatment. Respondents will submit a notification letter to NMED within 45 days, in place of documentation, that waste was received at a recycling facility.

2.7 Onsite Radiological Decontamination

Respondents will pursue on-site radiological surface or external decontamination as a preferred option. No volumetric or internal decontamination processes will be considered or performed. Surface radiological decontamination includes activities such as sand blasting, hand-scrubbing, or electrolytic decontamination. These decontamination activities could result in reducing or removing the radiological contaminant from the waste such that the waste could be recycled in accordance with CP Section 2.6 *Recycling/Re-Use* or be proposed for deletion in accordance with Section IX *Deletion of Waste* of the FFCO.

Activities for mixed waste to be radiologically decontaminated are identified in Table 2.7-1.

Table 2.7-1 *Activities for Radiological Decontamination*

A.	Meet all DOE requirements for radiological decontamination.
B.	Provide documentation to NMED that waste has been received within 45 working days of receipt of waste at the recycling facility; or
C.	Propose waste for deletion in accordance with Section IX of the FFCO.

3.0 MIXED LOW-LEVEL WASTE STREAMS

This section presents the preferred options to treat MLLW at LANL. ~~All preferred options~~ Options not described below must be approved by NMED in accordance with the revision process pursuant to the FFCO.

The original October 4, 1995, STP inventory in each MLLW treatability group was modified through the revision process in the FFCO. The tables in the STP Background (Part I) Appendices A–M of the FY09 STP Annual Update provide a comprehensive summary of changes to the CP covered waste inventories (additions, deletions, and shifts of waste between treatability groups) occurring as of the date of that revision. In Part III, the original STP inventory in each MLLW treatability group is denoted as subgroup 0 of that treatability group (e.g., the original volume of STP treatability group LA-W906 became LA-W906-0). Each revision that has since added volumes to individual treatability groups has resulted in creation of an additional subgroup, having the same number as the revision (e.g., LA-W906-4 was created in Revision 4.0, and LA-W906-5 was created in Revision 5.0).

In most subsections of this section, the subgroups of the treatability groups are not shown. In those cases, the Activities and Compliance Dates are applicable to the entire net volume of that treatability group. However, when subgroups of a treatability group were assigned Activities and Compliance Dates unique to that subgroup, those subgroups are detailed in the text. Activities and Compliance Dates that were met in previous years are not shown in this document.

3.1 Mixed Waste Streams

The following subsections summarize MLLW treatability groups.

3.1.1 Industrial Isopropyl Alcohol (IPA) Wastes and Scintillation Fluids

Table 3.1.1-1 Treatability Groups for IPA Wastes and Scintillation Fluids

Treatability Group	MWIR* Waste ID	RCRA Codes	Net Volume (m ³)
IPA Wastes	LA-W901	D001, D009, F002, F003, F005	0.00
Scintillation Fluids	LA-W902	D001, F003, F005	0.00
Totals			0.00

*MWIR is Mixed Waste Inventory Report

Treatment: The waste will be treated at an off-site facility that combusts organic liquid waste.

3.1.2 Lead Blankets, Soil with Heavy Metals, Environmental Restoration (ER) Soils

Table 3.1.2-1 Treatability Groups for Lead Blankets, Soil with Heavy Metals, ER Soils

Treatability Group	MWIR* Waste ID	RCRA Codes	Net Volume (m ³)
Lead Blankets	LA-W903	D007, D008	0.00
Soil With Heavy Metals	LA-W904	D004, D005, D006, D007, D008, D009, D010, D011	0.00

*MWIR is Mixed Waste Inventory Report

Table 3.2-3 Activities and Compliance Dates for Wastes Requiring Characterization or Assessment

Activity	Compliance Dates
A. Complete shipping of wastes to an off-site treatment facility, or submit documentation assigning waste items to applicable treatability groups or complete parallel option.	September 29, 2020
B. Provide documentation to NMED that waste was received at off-site facility or provide notification of parallel option.	Within 45 days of receipt of waste at off-site facility or within 45 days after completion of parallel option.

LANL’s inventory of *High Activity Waste* consists of five containers with a combined volume of 1.477 m³.

On July 10, 2019, a letter (EPC-DO:19-226, LA-UR-19-25967) was sent to NMED requesting an extension of compliance dates for Activity 3.2 (A) from September 29, 2019, to September 29, 2020. The notification for this request is noted in the FY18 STP Annual Report, although the extension request ~~occurred~~ occurred in FY19. The requested milestone extension is based on ~~the proposed~~ the proposed activities for the four ~~flanged tritium waste containers~~ (FTWCs) that are described in the “Temporary Authorization Request Waste Treatment, Storage, and Repackaging of Flanged Tritium Waste Containers,” LA-UR-19-24513, submitted to NMED on June 18, 2019. The justification for the extension of Activity 3.2 – specifically LA-W934 High Activity Waste, is that the four FTWCs require treatment by venting, storage, sorting, segregation, and repackaging and these activities are currently in the final planning and scheduling phases. The fifth container of mercury and tritium contaminated cryotrap, originating from experimental activities at the Ion Beam Facility, is presently situated at TA-54, Area G. Due to the presence of elemental mercury, sorting and segregation as described in the technical area is not appropriate for this waste. As this waste is also under the same compliance date of September 29, 2019, this container will require further discussion and planning toward options for a path forward, which has not been acted on to-date. Therefore, LANL will not meet the September 29, 2019, milestone for the remaining *High Activity Waste*.

As of August 14, 2019, NMED has reviewed the Extension Request dated July 8, 2019, and received July 10, 2019 (EPC-DO:19-226, LA-UR-19-25967), and has granted DOE and Triad the extension of a compliance plan milestone in the STP for *High Activity Waste* (LA-W934) from September 29, 2019, to September 29, 2020. This extension is DOE and Triad’s second extension request for compliance dates for Activity 3.2(A) listed in the STP, FY17. The first was received by NMED June 28, 2018. If Triad is unable to meet the deadline, Triad must provide NMED with a status report on the path forward for the mercury and tritium contaminated cryotrap container.

A note from NMED within the above approval letter stated (HWB-LANL-19-040):

“Requests for extensions are typically included in the annual updates of STP and not as separate extension requests. In future, in accordance with Section X.B.2 of the Federal Facility Compliance Order (FFCO), the Respondents should request extensions during annual updates of the Site Treatment Plan, Fiscal Year Annual Update and Proposed Revisions.”

DOE/~~LANS~~ Triad continues to diligently pursue all possible options to ship the waste off-site prior to the milestone for the remaining five containers (tritium traps with mercury contamination and the molecular sieves and squib assemblies containing lead with very high tritium). The containers were originally planned for transport off-site to a commercial treatment facility using a 10-160B shipping cask, but this option has been determined not to be viable. Options for shipment and disposal of these waste items are being reassessed by a multidisciplinary team, with the first priority being to ensure continued stable, safe storage on-site in the meantime.

A milestone extension request for September 29, 2021, for LA-W934, Treatability Group – High Activity Waste is proposed as discussed in the Compliance Plan Update Part II, Section 5.0, specifically Activity Table 3.2-3(A).

3.3 Plans for Other Types of Activities

The following subsection summarizes plans for other types of activities:

3.3.1 Lead Decontamination

Table 3.3.1-1 Treatability Groups for Lead Decontamination

Treatability Group	MWIR* Waste ID	First Category	Second Category	Totals
		Net Volume (m ³)	Net Volume (m ³)	Net Volume (m ³)
Lead For Surface Decontamination	LA-W930-0	0.00	0.00	0.00
	LA-W930-5			
Totals		0.00	0.00	0.00

*MWIR is Mixed Waste Inventory Report

Treatment: Any lead not acceptable for on-site or off-site lead decontamination, and any lead unsuccessfully decontaminated, will be designated in the following two categories: (1) for treatment and disposal at an off-site facility or (2) for recycle through an off-site capability, such as metal melting to create shielding blocks or a DOE lead bank. Non-conforming items will be reassigned to appropriate treatability groups in accordance with the FFCO.

Table 3.3.1-2 Additional Wastes for Lead Decontamination

Lead Requiring Sorting	LA-W931	D008	0.00
Totals			0.00

*MWIR is Mixed Waste Inventory Report

Treatment: Wastes in this treatability group will require different treatment processes. Drums will be opened, the contents removed, and the waste repackaged based on appropriate treatment requirements. Wastes in this treatability group are primarily lead pieces, lead shot, and lead-contaminated soils that were packaged in the same drum.

The wastes will be reclassified as the applicable treatability group after physical separation and repackaging. The wastes will be treated by appropriate technology.

3.3.4 10–100 nCi/g Waste

*MWIR is Mixed Waste Inventory Report

Treatment: Wastes in this treatability group consist of a population of legacy drums packaged and managed as MTRU (>100 nCi/g) but, after assay, were determined to be MLLW (<100 nCi/g). Once confirmed, these drums are segregated from other TRU waste and stored in a designated MLLW storage area. Waste Profiles are prepared to allow acceptance into the LLW population, and drums are relabeled appropriately and reclassified from TRU to MLLW in the database.

When a parent waste container is remediated, the waste contents are removed, WIPP waste acceptance criteria prohibited items are addressed, and the remaining waste is placed into one or more new containers. After this process is complete, the original parent waste container remains radiologically contaminated and usually can be managed as LLW. Empty containers are being managed as “RCRA empty” containers if they meet the “RCRA empty” criteria in 40 CFR 261.7. Empty containers that have lead liners must carry an EPA hazardous waste number (HWN) for lead (D008), and be managed as MLLW. If after real-time radiography assay, empty containers are found to still contain residual amounts of waste material that do not meet the “RCRA empty” criteria, the containers are to be labeled with the EPA HWN assigned to the original parent container, as indicated by the parent’s waste stream profile (in addition to D008, if the D008 HWN is added to the empty parent only because of the presence of a lead liner).

The MLLW drums are prepared for treatment and disposal to an off-site facility using LANL generator acceptable knowledge documentation and real-time radiography and non-destructive assay data. Restrictions imposed in 2015 for movements of LA-W935 waste at TA-54, Area G, were lifted in FY18. Past issues with the Area G Safety Basis were analyzed and corrected.

Table 3.3.4-2 Activities and Compliance Dates for 10–100 nCi/g Waste

Activity	Compliance Dates
A. Complete radiological characterization.	September 30, 2022
B. Complete shipment of existing waste to off-site facility for treatment, or complete parallel options.	September 30, 2022
C. Provide documentation to NMED that waste was received at off-site facility or provide notification of parallel option.	Within 45 days of receipt of waste at treatment facility or within 45 days after completion of parallel option.

The estimated waste volumes will be subtracted from the MTRU STP inventory and added to the MLLW STP inventory as the waste is reclassified as MLLW. However, because of the repacking process, the apparent volume of waste will reflect the number of additional containers needed to repackage the waste into compliant configurations for transportation and disposal. Empty TRU containers, which includes a population of empty TRU parent containers that previously contained nitrate salts will also undergo recharacterization and may be reclassified as LLW or if determined to not meet the definition of RCRA-empty, reclassified as MLLW.

The recharacterization process resumed in FY16 for waste to be accepted at off-site treatment and disposal facilities, and will continue to produce 10-100 nCi/g Waste (LA-W935). In 2018, N3B took over the operational responsibility of TA-54. Operational start-up included purchasing and installing treatment equipment and repairing existing deficiencies.

3.4 Management of “Missing” Items

Table 3.4-1 Waste Category for “Missing Waste”

Category	MWIR* Waste ID	Container ID	Net Volume (m ³)
Missing/Nonexistent/To be verified (TBV)			0.000
Totals			0.000

*MWIR is Mixed Waste Inventory Report

Treatment: During visual inspections and sampling activities in support of STP waste work-off, occasionally an item cannot be found, or it is not located in the expected containers, according to the LANL data files for the waste item. In some instances, such items cannot be verified as having been

received in storage at LANL, and follow-up investigations of the record files reveal that although the items were included in the original STP inventory, the waste items were never generated.

Some waste items were determined not to exist after visual inspection and document review. When Respondents determine that an STP-covered waste item does not exist, transfer of the item to the category called “Missing/nonexistent/TBV (to be verified)” is requested through this revision Annual Update.

If, at any time, any of these items is discovered in the inventory, NMED would be notified and approval would be requested for assignment of the rediscovered items to the appropriate treatability group. If necessary, discovered items would be assigned new Activities and Compliance Dates in accordance with the terms of the FFCO.

4.0 MIXED TRANSURANIC WASTE

Treatment Group(s): Assorted MTRU Waste

Off-site Disposal: MTRU waste at LANL will be shipped for disposal at WIPP, located in Carlsbad, New Mexico.

Disposal: Waste volumes listed in Table 4.0-1 constitute the remaining original population of the Framework Agreement of “non-cemented above-ground EM Legacy TRU” and “above-ground cemented EM Legacy TRU” that is MTRU waste only. Volume adjustments noted below are due to corrections of database entries, treatability group, EPA codes, overpacks removed/added, containers repacked and shipped/held for waste items identified as the non-cemented and cemented above-ground EM Legacy TRU for MTRU STP waste.

Table 4.0-1 Treatability Groups for The Framework Agreement - 3706 MTRU Waste Campaign (remaining containers at TA-54 and WCS on hold)

TOTALS	151.350	426.011	5.542	-39.284	- 58.228 106.516	- 48.288 8.584	431.561 428.519

¹This waste was shipped off-site to WIPP or a WCS facility but has not yet been disposed. Therefore, the volume is not to be subtracted from the STP inventory. Removal of this waste from the STP inventory is on hold until NMED approval has been received. This waste is a subset of the STP MTRU inventory.

Table 4.0-2 Activities and Compliance Dates for MTRU Inventory at TA-55 and CMR

Activity	Compliance Dates
A. Complete transfer of existing waste (excluding Metallic Waste) to TWF, WCRRF, or WIPP	November 30, 2022
B. Complete transfer of Metallic Waste (CVD) to CMR for material retrieval	October 31, 2020

Transfer of Covered MTRU Inventory: The FY18-FY19 reported waste volume for STP-covered MTRU inventory is ~~1798.802~~1751.711 m³ (Table 2.2-1). At the close of FY197, ~~approximately nine CVDs have been shipped to the CMR with a total volume of 28.791m³~~2.796m³. This waste is the CVD Project, which was formerly referred to as the Bolas Grande Project. There is one CVD left with a volume of 3.199 m³; that is located at TA-55. ~~of the STP waste associated with the CVD Project (formerly referred to as the Bolas Grande Project), that started in the summer of FY14, at TA-55.~~ A milestone extension to October 31, 2020 was approved for the removal of the remaining ~~four~~ CVDs as shown in Table 4.0-2; (B), which was requested in the FY16 STP Annual Update.

~~The remaining CVD inventory at TA-55 is A milestone extension request for October 31, 2021, for the CVD material recovery reprocessing project; is proposed as discussed in the Compliance Plan Update Part II, Section 5.0, specifically Activity Table 4.0-2(B).6.3983.199 m³.~~

In FY18FY19, the remaining ~~354.703~~345.552 m³ (Appendix E-2) of the covered MTRU waste inventory at TA-55, CMR, and TWF consists of combustible and noncombustible waste (S5400), combustible-noncombustible organic debris waste (S5300), metallic waste (Non CVD) (S5100), and noncombustible waste (S3100), combustible – noncombustible waste (S5900). This MTRU inventory of waste will not be transferred to TA-54. It will be transported only to the Radioassay and Nondestructive Testing facility for shipment to WIPP.

The de-inventory of TA-545’s MTRU waste will take multiple years. A milestone extension request to November 30, 2022, is proposed as shown in Table 4.0-2; (A). A subset of the covered MTRU waste inventory will require management at the Waste Characterization, Reduction, and Repacking Facility (WCRRF) as the waste acceptance criteria for WIPP has changed since the waste was generated. WCRRF will not receive waste until it has implemented corrective actions as directed by the DOE’s Accident Investigation Board, including updating its Safety Basis documents. DOE EM manages TA-54. DOE EM stated that TA-54 will not receive any programmatic newly-generated waste. The LANL Hazardous Waste Permit specifies that MTRU waste generated prior to April 21, 2011, cannot be stored at the TWF. In addition, WIPP is expected to receive a limited number of waste shipments per week. Respondents resumed shipment of MTRU waste in October 2018.

4.1 Management of “Missing” Items

Table 4.1-2 Waste Category for “Missing Waste”

Category	Treatability Groups	Net Volume (m ³)
Missing/Nonexistent/TBV	Cemented Sludge	0.00
	Combustible-Noncombustible Waste	0.000
	Combustible Waste	0.000

Category	Treatability Groups	Net Volume (m ³)
Totals		0.000

Treatment: During visual inspections in support of STP waste work-off, occasionally an item cannot be found, or it is not located in the expected containers, according to the LANL data files for the waste item. In some instances, such items cannot be verified as having been received in storage at LANL, and follow-up investigations of the record files reveal that although the items were included in the original STP inventory, the waste items were never generated.

Some items were determined not to exist after visual inspection and document review. When Respondents determine that an STP-covered waste item does not exist, transfer of the item to the category called “Missing/nonexistent/TBV” is requested through this revision Annual Update.

If, at any time, any of these items is discovered in the inventory, NMED would be notified and approval requested for assignment of the rediscovered items to the appropriate treatability group.

APPENDIX G CURRENT YEAR MTRU INVENTORY – ADMINISTRATIVE ADJUSTMENTS

Table G-1 FY18-FY19 MTRU Administrative Adjustments to TA-54 Inventory

Treatability Group	Administrative Adjustment	Volume (m3)
Cemented Sludge Waste	3706 Above-ground EM Legacy TRU (MTRU waste only)-in the "CIN" waste streams as applied by LANL AKEs/LANL Generators. This waste was removed from the Combustible-Noncombustible Waste and Solidified Organic and Inorganic Waste treatability groups. The total volume on-site is listed in Table 4.0-1.	55,288.0
	FY14 Shipped Off-site on Hold in the "CIN" waste streams as applied by LANL AKEs. This waste was removed from the Combustible-Nonecombustible Waste and Solidified Inorganic and Organic Waste treatability groups. The total volume on-site is listed in Table F-2. Shipped off-site from WCS to WIPP	11,856.1040
	Containers from the Combustible-Noncombustible Waste, Inorganic Salt Nonecombustible Waste, and Solidified Inorganic and Organic Waste treatability groups were reverted back to the Cemented Sludge treatability group to be consistent with N3B reporting for the "CIN" waste streams as defined by LANL AKEs. A portion of this waste was not collected in the last annual report. Repackaged	507,284.11,606
Cemented Sludge Waste Net Adjustment		507,284.11,606
Combustible-Noncombustible Waste	3706 Above-ground EM Legacy TRU (MTRU waste only)-in the "MHD" waste streams as applied by LANL AKEs/LANL Generators. This waste was removed from the Combustible Waste, Nonecombustible Waste, and Solidified Organic and Inorganic Waste treatability groups. The total volume on-site is listed in Table 4.0-1.	276,669.0
	FY14 Shipped Off-site on Hold in the "MHD" waste streams as applied by LANL AKEs. This waste was moved into the Cemented Sludge Waste, Nonecombustible Waste, Solidified Inorganic Nonecombustible Waste, and Solidified Inorganic Particulate Waste treatability groups. The total volume on-site is listed in Table F-2. Shipped off-site from WCS to WIPP	7,488.1,248
	Repackaged Containers from the Solidified Inorganic and Organic Waste treatability group were reverted back to the Combustible-Noncombustible Waste treatability group. This categorization is consistent with N3B reporting for the "MHD" waste streams as defined by LANL AKEs.	596,790.3,128
Combustible-Noncombustible Waste Net Adjustment		596,790.3,128
Metallic Waste	Container from the Metallic Waste treatability group was moved into the Combustible-Nonecombustible Waste treatability group. Repackaged	0.208
Metallic Waste Net Adjustment		0.208
Noncombustible Waste	3706 Above-ground EM Legacy TRU (MTRU waste only)-in the "MIN04/MSG04" waste streams as applied by LANL AKEs/LANL Generators. This waste was removed from the Solidified Inorganic and Organic Waste Waste treatability group. The total volume on-site is listed in Table 4.0-1.	0.9460
	FY14 Shipped Off-site on Hold in the "MIN04/MSG04" waste streams as applied by LANL AKEs. This waste was removed from the Combustible-Nonecombustible Waste and Solidified Inorganic and Organic Waste treatability groups. The total volume on-site is listed in Table F-2.	0.2080
	Repackaged Containers from the Solidified Inorganic and Organic Waste treatability group were reverted back to the Noncombustible Waste treatability	3,234.0

	group. This categorization is consistent with N3B reporting for the "MIN04/MSG04" waste stream as defined by LANL AKEs.

APPENDIX H MLLW TREATMENT FACILITIES

Table H-1 Commercial Facilities Contacted for Waste Treatment Capabilities

Commercial Facility	Location
<p>Perma-Fix (including Material & Energy Corporation in Tennessee; Diversified Scientific Services, Inc. in Tennessee; and Perma-Fix North West in Washington; and Perma-Fix Florida in Gainesville, Florida)</p> <p>Perma-Fix has permitted treatment facilities for the treatment of low-level radioactive and low-level mixed waste. The facilities can perform to include thermal treatment, compaction, macroencapsulation, neutralization, and stabilization. All are licenced within their respective State of location under the Nuclear Regulatory Commission regulations and permitted under the RCRA regulations</p>	<p>Florida, Washington and Tennessee</p>
<p>Waste Control Specialists (WCS)</p> <p>WCS, located in Andrews, Texas, is a permitted treatment facility for the treatment and disposal of LLW and MLLW. The site has regulatory authorization for industrial solid waste and hazardous waste storage, processing, and land disposal under RCRA permit # HW-50358 granted by the state of Texas. EPA has authorized the site for treatment, storage, and land disposal of Toxic Substances Control Act (TSCA) wastes (TXD988088464). The facility can process waste that requires compaction, microencapsulation, macroencapsulation, neutralization, deactivation, chemical oxidation, chemical reduction and stabilization.</p>	<p>Texas</p>
<p>Energy Solutions Energy Solutions of Utah (including Bear Creek Operations in Tennessee)</p> <p>Energy Solutions, located in Clive, Utah, is a permitted treatment facility for the treatment and disposal of LLW and MLLW. The site houses both a low-level radioactive waste treatment facility and a low-level mixed waste treatment facility, which are licensed under state of Utah Department of Environmental Quality, License Number UT2300249 and by the EPA hazardous waste permit number UT0982598898.</p>	<p>Utah</p>
<p>Nuclear Fuel Services</p>	<p>Tennessee</p>
<p>Integrated Environmental Services</p>	<p>Tennessee</p>
<p>NSSI</p>	<p>Texas</p>

APPENDIX I CORRESPONDENCE

Table I-1 FY198 Triad Expedited Shipment Letters

Letter Date	Description	Letter Number	Revision Reference
<u>1/7/2019</u>	<u>Notice of Completion of Expedited Off-Site Waste Shipment Activity 3.3.4 (B and C), Compliance Plan, Site Treatment Plan, Federal Facility Compliance Order, Los Alamos National Laboratory</u> No Expedited Shipment Letters for FY18	<u>EPC-DO: 18-438</u>	<u>30</u>
<u>3/7/2019</u>	<u>Resubmittal of the Notice of Completion of Expedited Off-Site Waste Shipment Activity 3.3.4 (B and C), Compliance Plan, Site Treatment Plan, Federal Facility Compliance Order, Los Alamos National Laboratory</u>	<u>EPC-DO: 19-063</u>	<u>30</u>
<u>5/21/2019</u>	<u>Notice of Completion of Expedited Off-Site Waste Shipment Activity 3.3.4 (B and C), Compliance Plan, Site Treatment Plan, Federal Facility Compliance Order, Los Alamos National Laboratory</u>	<u>EPC-DO: 19-154</u>	<u>30</u>
<u>6/5/2019</u>	<u>Notice of Completion of Expedited Off-Site Waste Shipment Activity 3.3.4 (B and C), Compliance Plan, Site Treatment Plan, Federal Facility Compliance Order, Los Alamos National Laboratory</u>	<u>EPC-DO: 19-171</u>	<u>30</u>
<u>8/27/2019</u>	<u>Notice of Completion of Expedited Off-Site Waste Shipment Activity 3.3.4 (B and C), Compliance Plan, Site Treatment Plan, Federal Facility Compliance Order, Los Alamos National Laboratory</u>	<u>EPC-DO: 19-273</u>	<u>30</u>
<u>8/27/2019</u>	<u>Notice of Completion of Expedited Off-Site Waste Shipment Activity 3.3.4 (B and C), Compliance Plan, Site Treatment Plan, Federal Facility Compliance Order, Los Alamos National Laboratory</u>	<u>EPC-DO: 19-277</u>	<u>30</u>
<u>9/19/2019</u>	<u>Notice of Completion of Expedited Off-Site Waste Shipment Activity 3.3.4 (B and C), Compliance Plan, Site Treatment Plan, Federal Facility Compliance Order, Los Alamos National Laboratory</u>	<u>EPC-DO: 19-317</u>	<u>30</u>

Table I-3 (continued)

APPENDIX J HISTORY OF CHANGES TO THE CP AND FFCO

As discussed in Part III (CP), Section 1.2, the STP CP has been modified several times since it was originally issued, in accordance with the provisions of Section X, *Revisions*, and Section XI, *Other Amendments to the STP*, of the October 4, 1995, FFCO, as amended and revised. This appendix provides a summary of these CP changes and of modifications to the FFCO since its issuance.

To date, there have been ~~28 revisions, revision 29 is pending NMED approval, 7 revisions~~ and three amendments to the CP. In addition, the FFCO was amended once on May 20, 1997. Table J-1 provides a summary of these changes. More detailed descriptions can be found in the CP Update portion of each year's STP *Annual Update* and the original correspondence requesting each change.

Table J-1 Summary of Changes to the CP and the FFCO

Action	Document Modified	Effective Date	Effect on FFCO/STP
Rev. 1.0	STP/CP	6/12/96	Added off-site treatment as a parallel preferred option for most MLLW treatability groups.
Rev. 2.0	STP/CP	12/9/96	Reduced volume of LA-W928 by approving reclassification of sludge as LLW.
Amendment 1.0	STP/CP	10/30/96	Divided original volume of LA-W929 into three subgroups, and added new Activities and Compliance Dates.
Rev. 3.0	STP/CP	1/27/97	Divided original volume of LA-W929 into three subgroups, and added new Activities and Compliance Dates.
Amendment 1.0	FFCO	5/20/97	Modified FFCO Sections IV, V, IX, and X to streamline waste transfers and deletions.
Amendment 2.0	STP/CP	9/4/97	Extended CP Activity 3.1.2B Compliance Date to 12/29/97.
Rev. 4.0	STP/CP	12/29/97	Transferred original volume of LA-W929 from three subgroups to other treatability groups, added treatability groups, and deleted treated items.
Rev. 5.0	STP/CP	12/29/97	Added volumes reported in FY95 and FY96 <i>Annual Updates</i> (and certain other items) to several treatability groups, added Activities and Compliance Dates, added CP Appendices, and deleted treated items.
Rev. 6.0	STP/CP	7/31/98	Added volumes reported in FY97 <i>Annual Update</i> to several treatability groups, added certain Activities and Compliance Dates, adjusted several original inventory volumes, transferred one LA-W929 item to a new treatability group, and deleted treated items.
Rev. 7.0	STP/CP	11/30/98	Removed on-site treatment skids, added STP inventory items, added on-site recycling/re-use and radiological decontamination, added notification for off-site treatability studies.
Rev. 8.0	STP/CP	12/3/98	Extended compliance dates for treatment of MTRU waste.
Rev. 9.0	STP/CP	6/7/00	Added and deleted volumes reported in FY98 <i>Annual Update</i> to certain treatability groups.
Amendment 3.0	STP/CP	8/30/99	Transferred three items to MTRU, transferred one item to subgroup within same treatability group.
Rev. 10.0	STP/CP	12/18/00	Added and deleted volumes reported in FY99 <i>Annual Update</i> to certain treatability groups.
Rev. 11.0	STP/CP	4/18/01	Added and deleted volumes reported in FY00 <i>Annual Update</i> .

Table J-1 (continued)

Action	Document Modified	Effective Date	Effect on FFCO/STP
Rev. 12.0	STP/CP	3/13/02	Added and deleted volumes reported in FY01 <i>Annual Update</i> . Extended CP Activity 3.1.5A Compliance Date to 8/25/03. Extended CP Activity 3.1.11A to 2/01/04. Removed the requirement to develop treatment technologies and the associated compliance schedule in CP Activity 4.0 and added language specifying that MTRU waste would be shipped off-site to WIPP for disposal.
Rev 13.0	STP/CP	7/14/03	Added and deleted volumes reported in FY02 <i>Annual Update</i> .
Rev 14.0	STP/CP	1/5/05	Added and deleted volumes reported in FY03 <i>Annual Update</i> .
Rev 15.0	STP/CP	8/16/05	Added and deleted volumes reported in FY04 <i>Annual Update</i> .
Rev 16.0	STP/CP	12/12/06	Added and deleted volumes reported in FY05 <i>Annual Update</i> . Extended CP Activity 3.1.8(A) Compliance Date to 8/09/07. Extended CP Activity 3.1.9(A) Compliance Date to 8/09/07. Extended CP Activity 3.1.10(A) Compliance Date to 8/31/07. Extended CP Activity 3.1.11(A) Compliance Date to 12/31/07. Extended CP Activity 3.2(J) Compliance Date to 12/31/07. Reclassified 0.2082 m ³ of LA-W934 High Activity MLLW waste to MTRU waste.
Rev 17.0	STP/CP	6/26/08	Added and deleted volumes reported in FY06 <i>Annual Update</i> . Extended CP Activity 3.1.5(A) Compliance Date to 12/31/08. Extended CPV Activity 3.1.8(A) Compliance Date to 8/28/08. Extended CP Activity 3.1.9(A) Compliance Date to 8/28/08. Extended CP Activity 3.2(J) Compliance Date to 12/31/08.
Rev 18.0	STP/CP	1/9/09	Added and deleted volumes reported in FY07 <i>Annual Update</i> . Extended CP Activity 3.1.8(A) Compliance Date to 8/28/09. Extended CP Activity 3.1.9(A) Compliance Date to 8/28/09. Proposed a new Section 3.3.4 for Treatability Group, LA-W935 10–100 nCi/g Waste with new CP Activity 3.3.4 (A) Compliance Date 12/01/13 and CP Activity 3.3.4 (B) Compliance Date 12/31/13. Extended CP Activity 3.2(J) Compliance Date to 12/31/10.
Rev 19.0	STP/CP	2/5/10	Added and deleted volumes reported in FY08 <i>Annual Update</i> . Extended compliance date for CP Activities 3.1.8(A) and 3.1.9(A) to 8/28/12. Proposed a new milestone of 12/31/2010 for 3.1.4(A) and a new milestone 3.3.4(C) for 10–100 nCi/g Waste.
Rev 20.0	STP/CP	11/8/10	Added and deleted volumes reported in FY09 <i>Annual Update</i> . Proposed an extended compliance date for CP Activity 3.2(J).
Rev 21.0	STP/CP	3/21/12	Added and deleted volumes reported in FY10 <i>Annual Update</i> . Proposed new compliance date for CP Activity 3.1.8(A).
Rev 22.0	STP/CP	12/10/12	Added and deleted volumes reported in FY11 <i>Annual Update</i> .
Rev 23.0	STP/CP	08-26-2015	Added and deleted volumes reported in FY12 <i>Annual Update</i> Added Table 4.0-1 Treatability Groups for the Framework Agreement MTRU Waste
Rev 24.0	STP/CP	08-26-2015	Added and deleted volumes reported in FY13 <i>Annual Update</i> Proposed compliance date for CP Activity 3.1.5(A) Proposed compliance date for CP Activity 3.1.8(A) Extended CP Activity 3.2(J) Compliance Date to 6/30/2018 Proposed compliance date for CP Activity 3.3.4 (A and B)
Rev 25.0	STP/CP	TBD	Added and deleted volumes reported in FY14 <i>Annual Update</i> On Hold volumes reported shipped in FY14 <i>Annual Update</i> Proposed compliance date for CP Activity 3.1.8(A) Proposed compliance date for CP Activity 3.3.4 (A and B)

Table J-1 (continued)

Action	Document Modified	Effective Date	Effect on FFCO/STP
Rev 26.0	STP/CP	01-30-2017	Added and deleted volumes reported in FY15 Annual Update On Hold volumes reported shipped in FY14 Annual Update Proposed compliance date for CP Activity 4.0-2 (C)
Rev 27.0	STP/CP	03/21/2017	Added and deleted volumes reported in FY16 Annual Update On Hold volumes reported shipped in FY14 Annual Update Proposed compliance date for CP Activities 4.0-2(a), and 4.0-2(c).
Rev 28.0	STP/CP	5/9/2019	Added and deleted volumes reported in FY17 Annual Update On Hold volumes reported shipped in FY14 Annual Update Proposed compliance date for CP Activities 3.1.8-2(A), and 3.3.4-2 (A and B).
Rev 29.0	STP/CP	4/9/2020 TBD	Added and deleted volumes reported in FY18 Annual Update using volume information spreadsheets supplied from TA-55, CMR and TWF and other databases for volume information at TA-54. Updated Tables and Appendices throughout document. Updated Part III, Section Section 3.2, FTWCs compliance date extension request and NMED approval. Updated Part III, Section 4.0, “Transfer of Covered MTRU Inventory” for CVDs. Appendix A was split into two tables: A-1 for N3B and A-2 for LANS. Appendix E was split into two tables: E-1 for N3B and E-2 for LANS. All tables in Appendix F were reconstructed for better comprehension and purpose. Table F-1 removed column “Total FY14 Inventory (above grade on Hold (m³)” as this information in captured in F-2 and F-4 tables. Appendix G was split into two tables: G-1 for N3B and G-2 for LANS.
<u>Rev 30.0</u>	<u>STP/CP</u>	<u>TBD</u>	<u>Updated volumes reported in FY19 Annual Update using data from WCATS.</u> <u>Updated Tables and Appendices throughout document.</u> <u>Table 2.2-1: Lines involved with information for “FY14 on Hold” was made to reflect current up-to-date information and clarity.</u> <u>Table 4.0-1: Updated the title of each column for clarity.</u> <u>Updated information throughout the report, either to remove redundancies and/or add information to keep the report up-to-date and consistent.</u> <u>All tables in Appendix F were reconstructed for clarity and purpose.</u> <u>Table F-1: Removed column “Total FY14 Inventory (above-grade on Hold [m³])” as this information in captured in F-2 and F-4 tables.</u> <u>Table F-4: Reworded the title for clarity.</u> -Appendix D was split into two tables: D-1 for N3B and D-2 for Triad.
