

# Part II

# Flaring and Venting Maps

Robert Balch

Martha Cather

Petroleum Recovery Research Center

New Mexico Tech

# Data Source

- For Emissions, NM OCD Production Database, “Other Volumes”
  - Data is reported by as a lump sum grouped by Operator, Property ID, Year, Month, and type of emission (flared, vented, used on lease, lost, etc)
  - For work to date we focus on flared and vented data from 2015-2019
- For Production, NM OCD Production & GIS Databases, various tables incl. oil & gas production, well locations, well information

# Data Methods

- For most analyses, Property ID is the most granular we could get.\*
- Property ID does not have a geographical location attached, since there may be many “API’s” lumped into a given property. The “largest” property had associated APIs (556 active wells, 14 cancelled). Others have only 1 or no wells
- For mapping, Centroid of locations of all associated APIs was used to create a single property location. Could use a variety of criteria to further refine (eg., centroid for flared properties vs vented, all APIs vs only active wells, etc)

# Results – Flaring Trends

- Flaring generally increases towards year end
- Quite a bit of month to month variation
- Flaring generally follows completions or lags slightly (Slide 16 of previous presentation)

# Results – Venting Trends

Vented, Statewide by Month (mcf)

- Venting less volume, larger impact
- Any trend seems to decline during year
- Quite a bit of month to month variation
  
- Does not seem to be a correlation with completions (Slide 16 of previous presentation)

# Venting by Size of Event

# 2015 vented

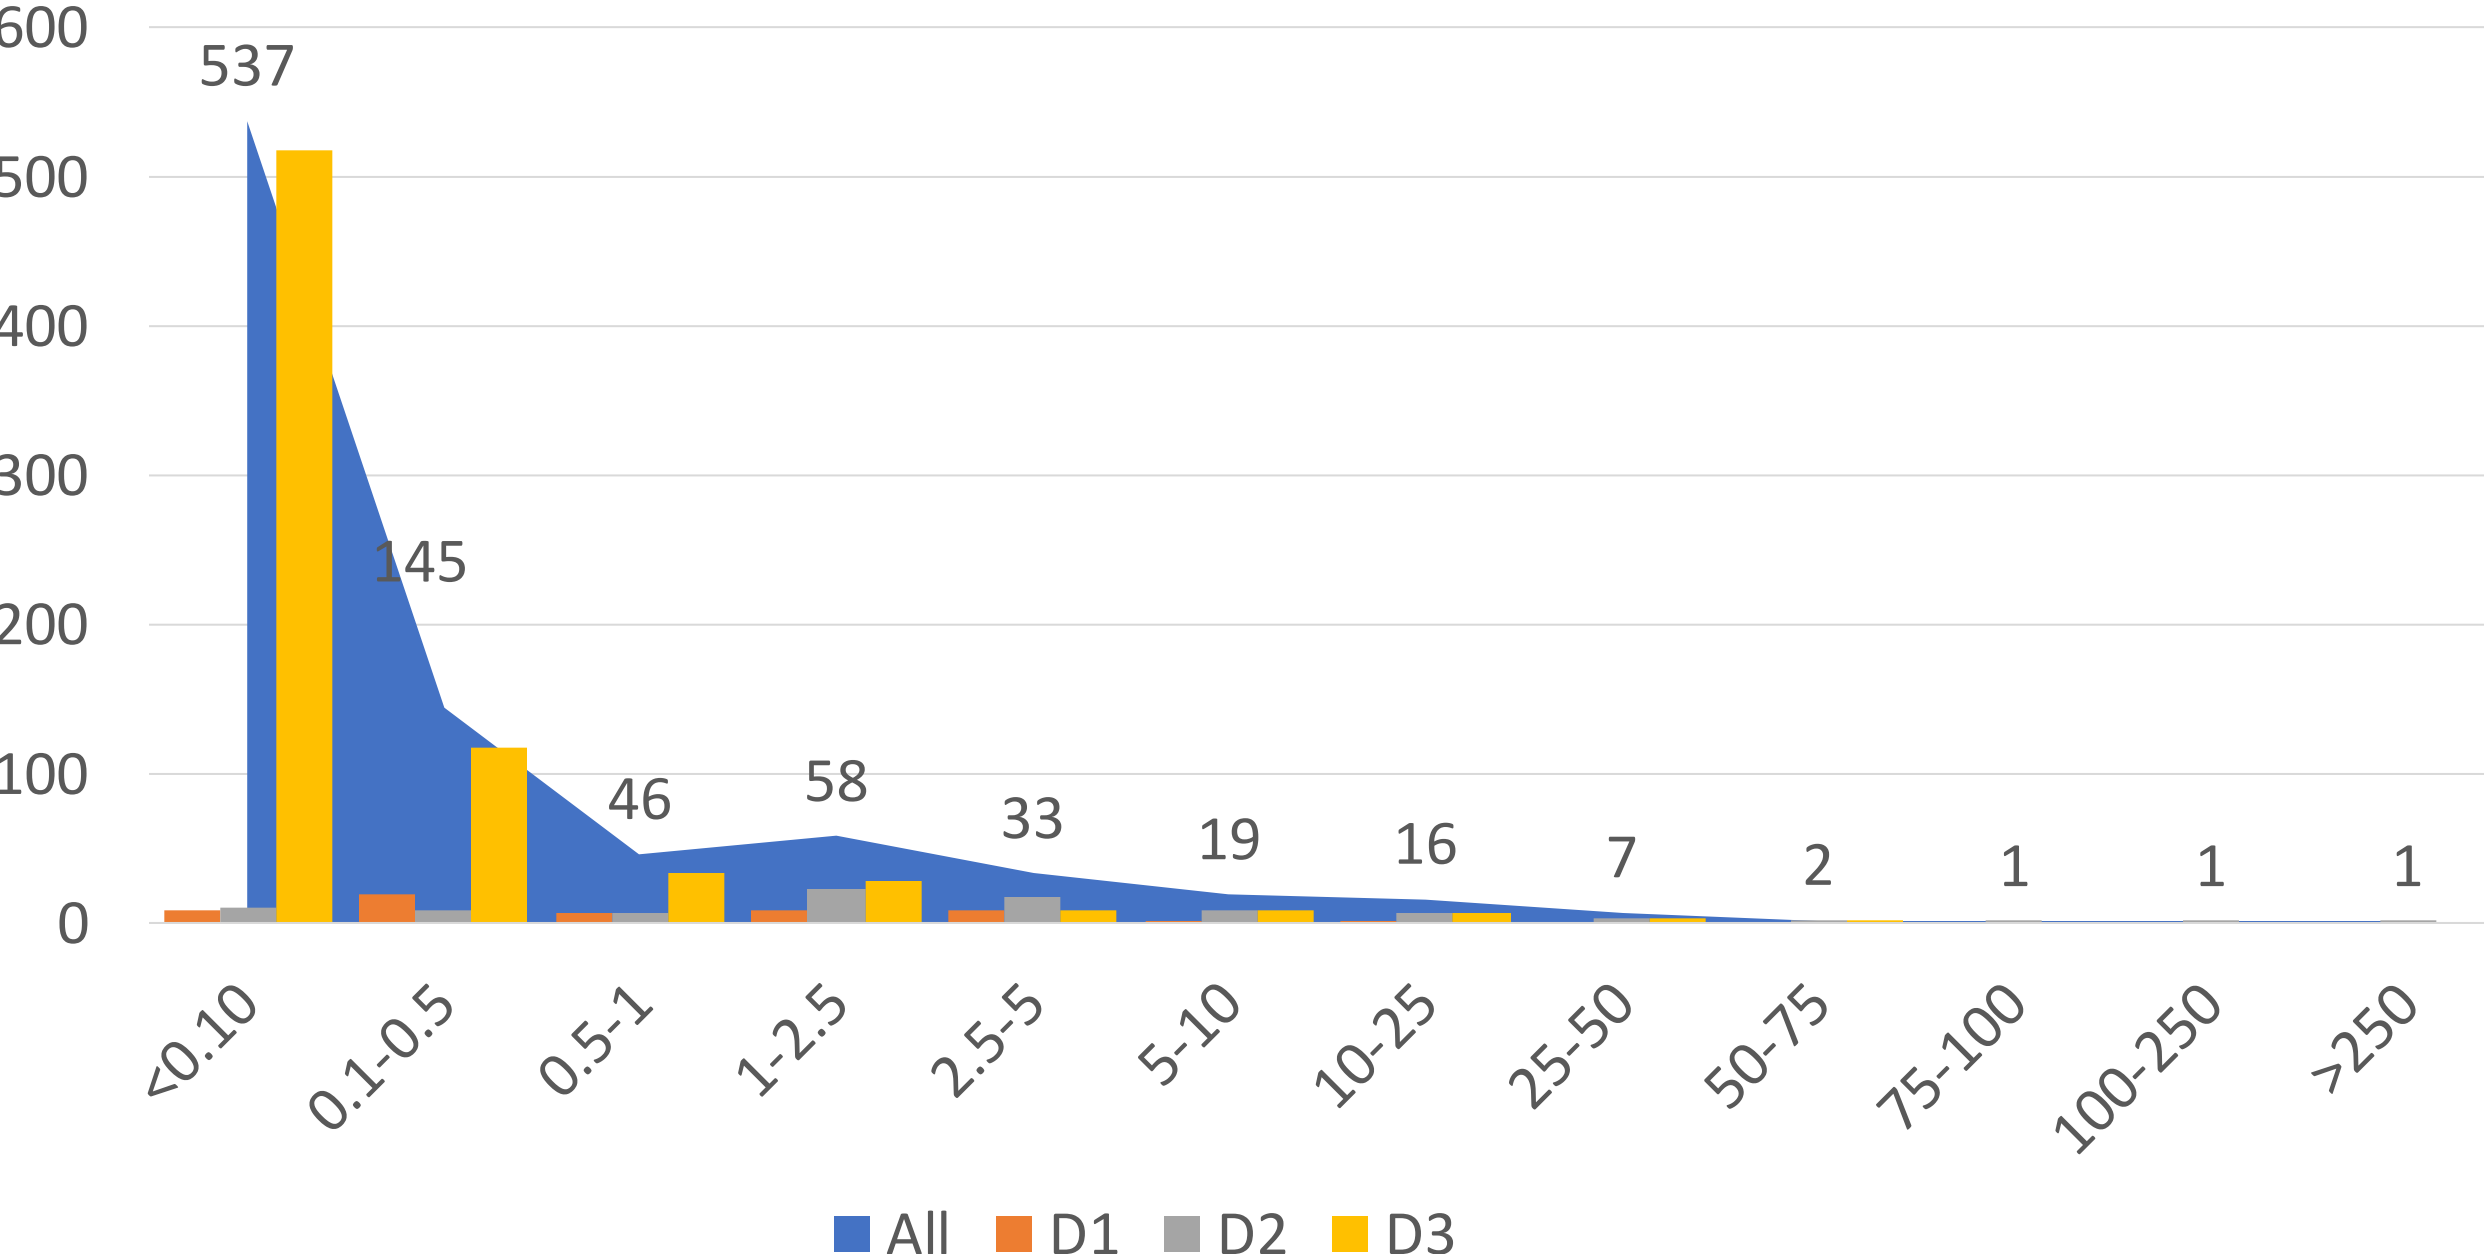

# 2016 vented

# 2017 vented

# 2018 vented

# 2019 vented

Flaring by Size of Event

# 2015 flared

# 2016 flared

# 2017 flared

# 2018 flared

# 2019 flared

# Cumulative Production Compared to Emmissions

# Statewide

# District 1 Cum Production vs Emissions

# District 2 Cum Production vs Emissions

# District 3 Cum Production vs Emissions

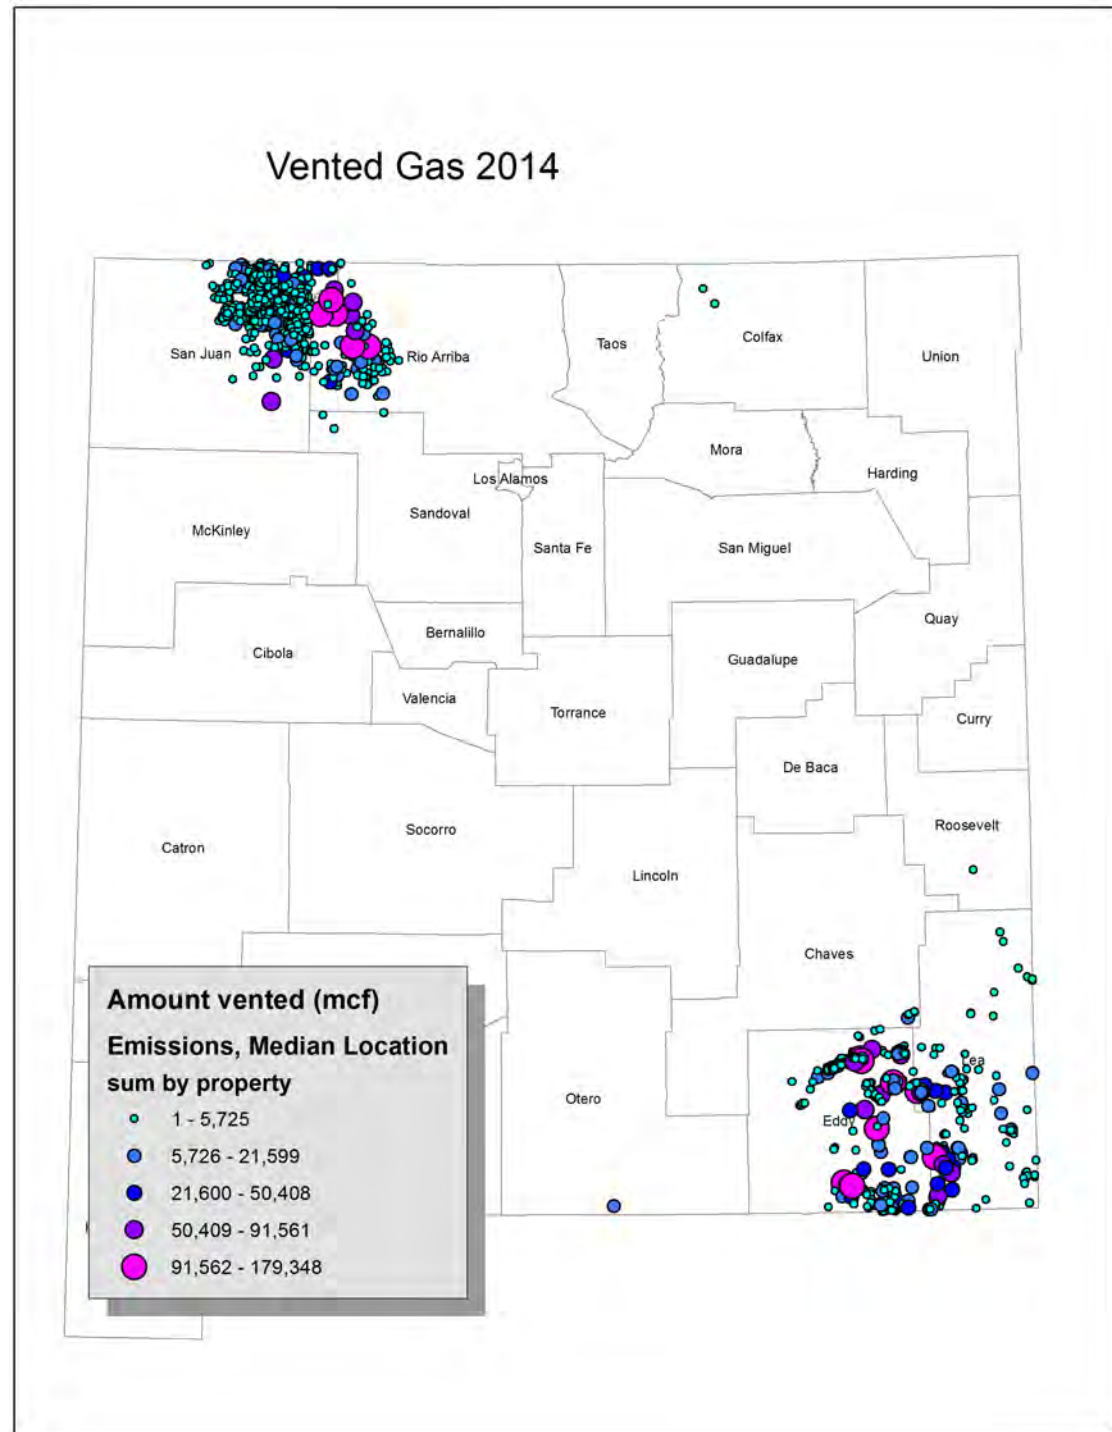

— Cum Oil (MBO) — Cum Flared (MMCF) — Cum Vented (MMCF) — Cum Gas (MMCF)

# Mapped Vent and Flare Events

# Mapping Vented Gas

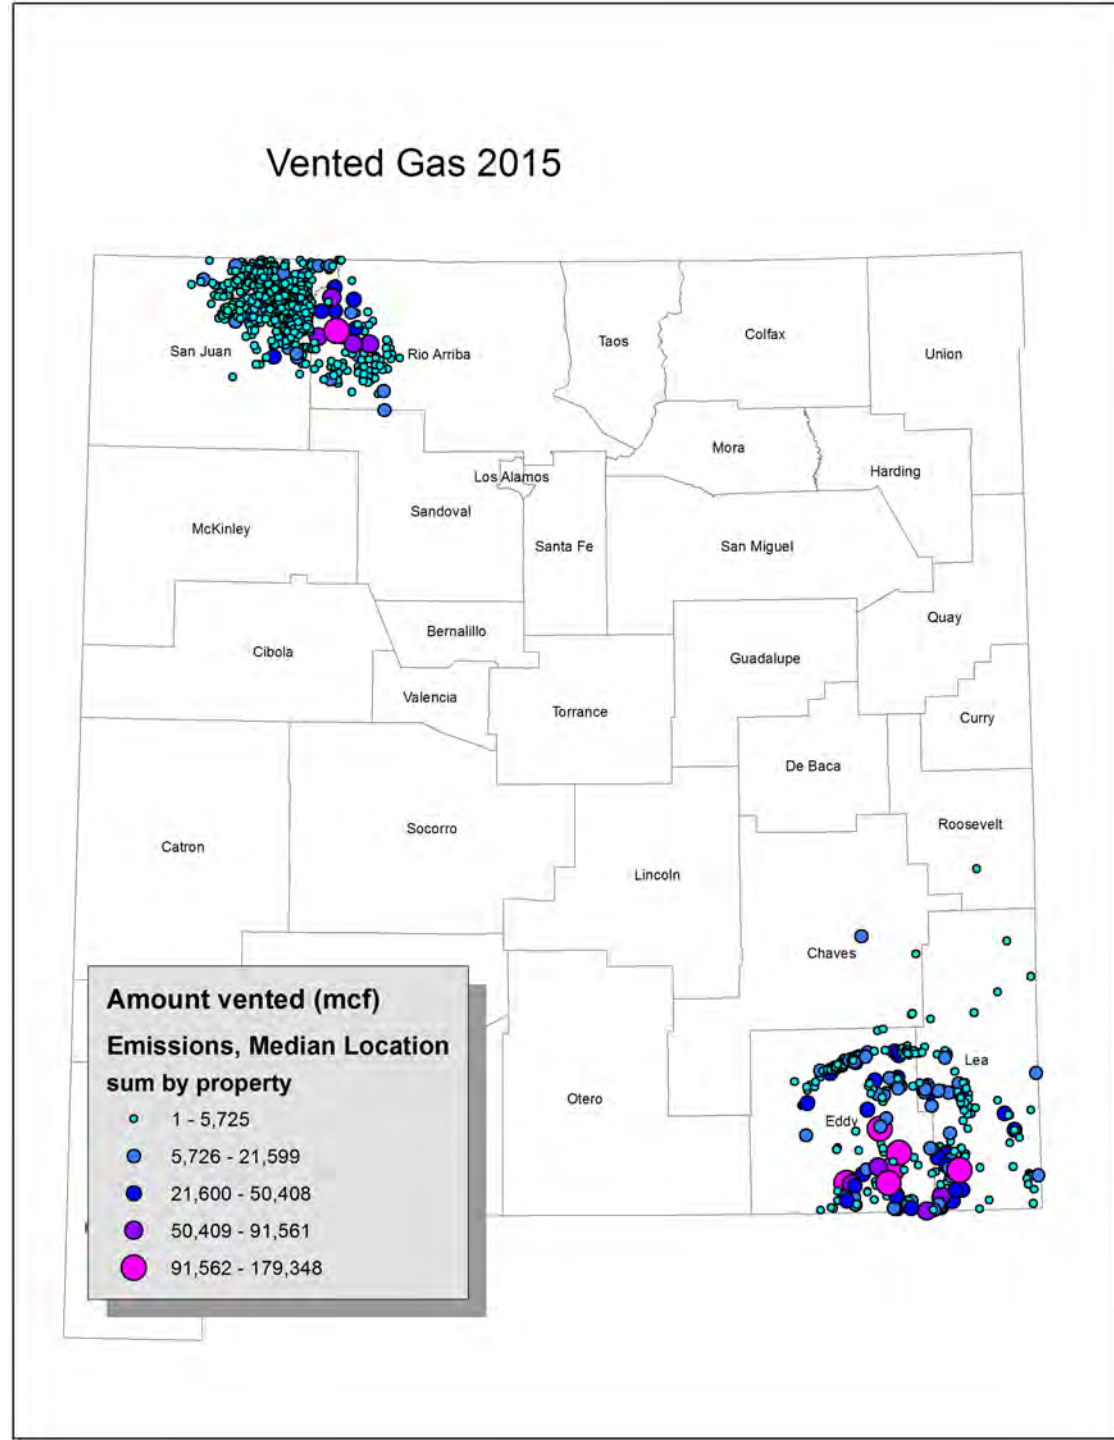

- Vented Gas is greatly reduced in NW NM through 2014-2019
- Vented Gas is greatly increased in SE NM through 2014-2019

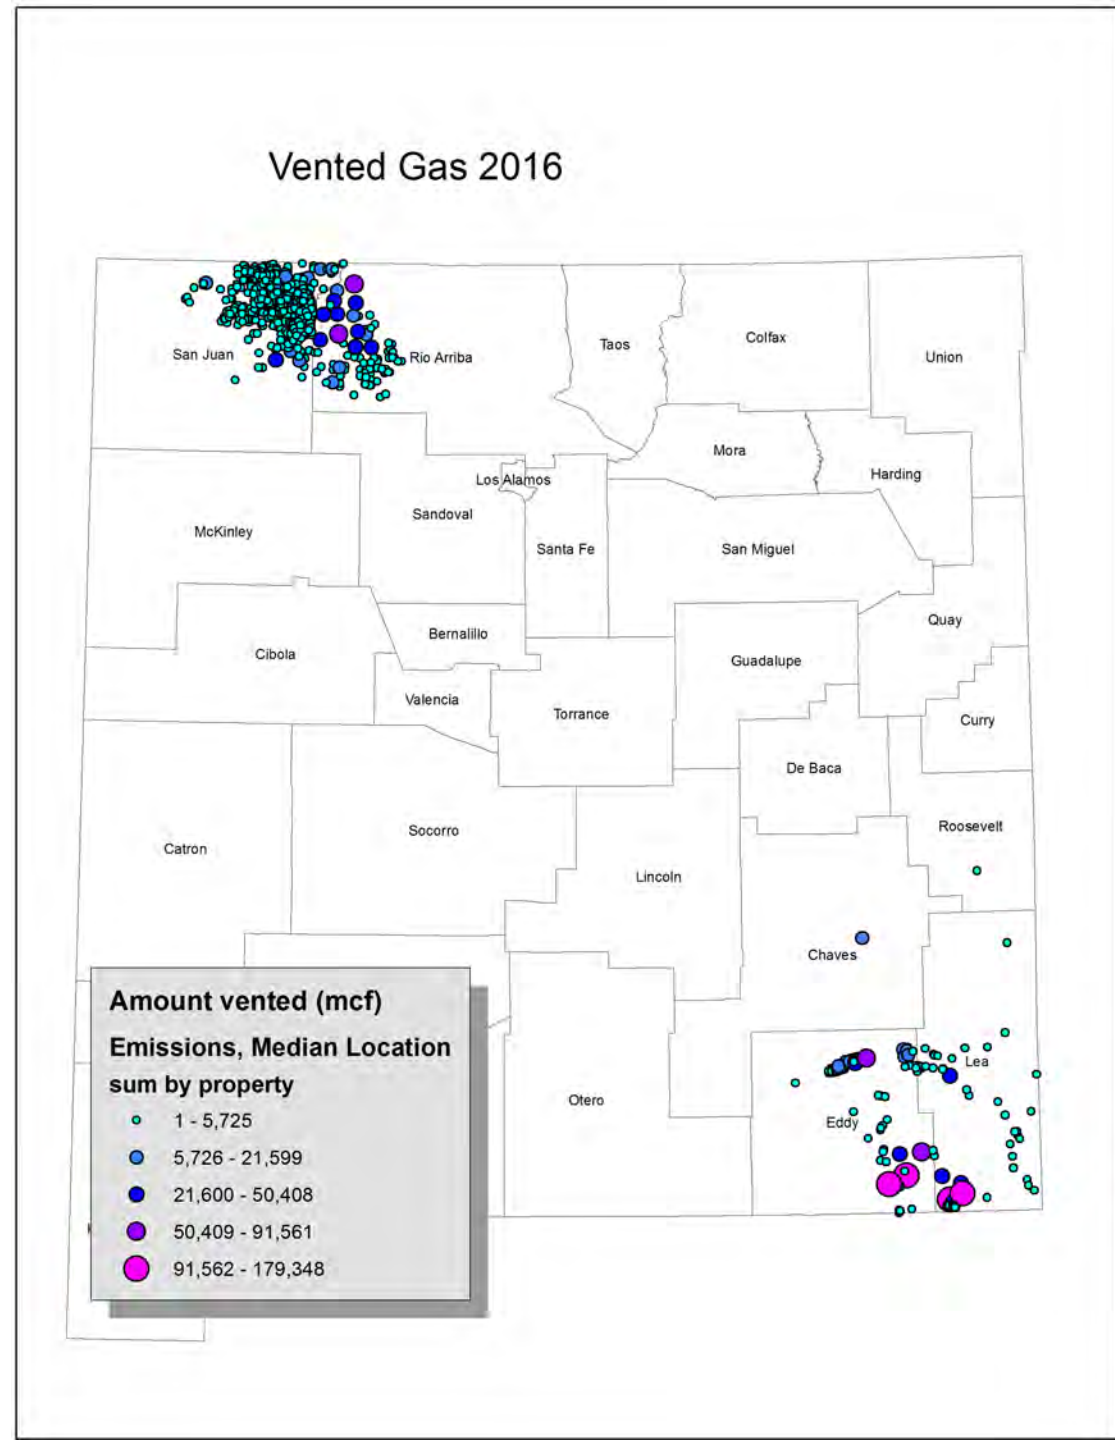

# Mapping Vented Gas

- Vented Gas is greatly reduced in NW NM through 2014-2019
- Vented Gas is greatly increased in SE NM through 2014-2019

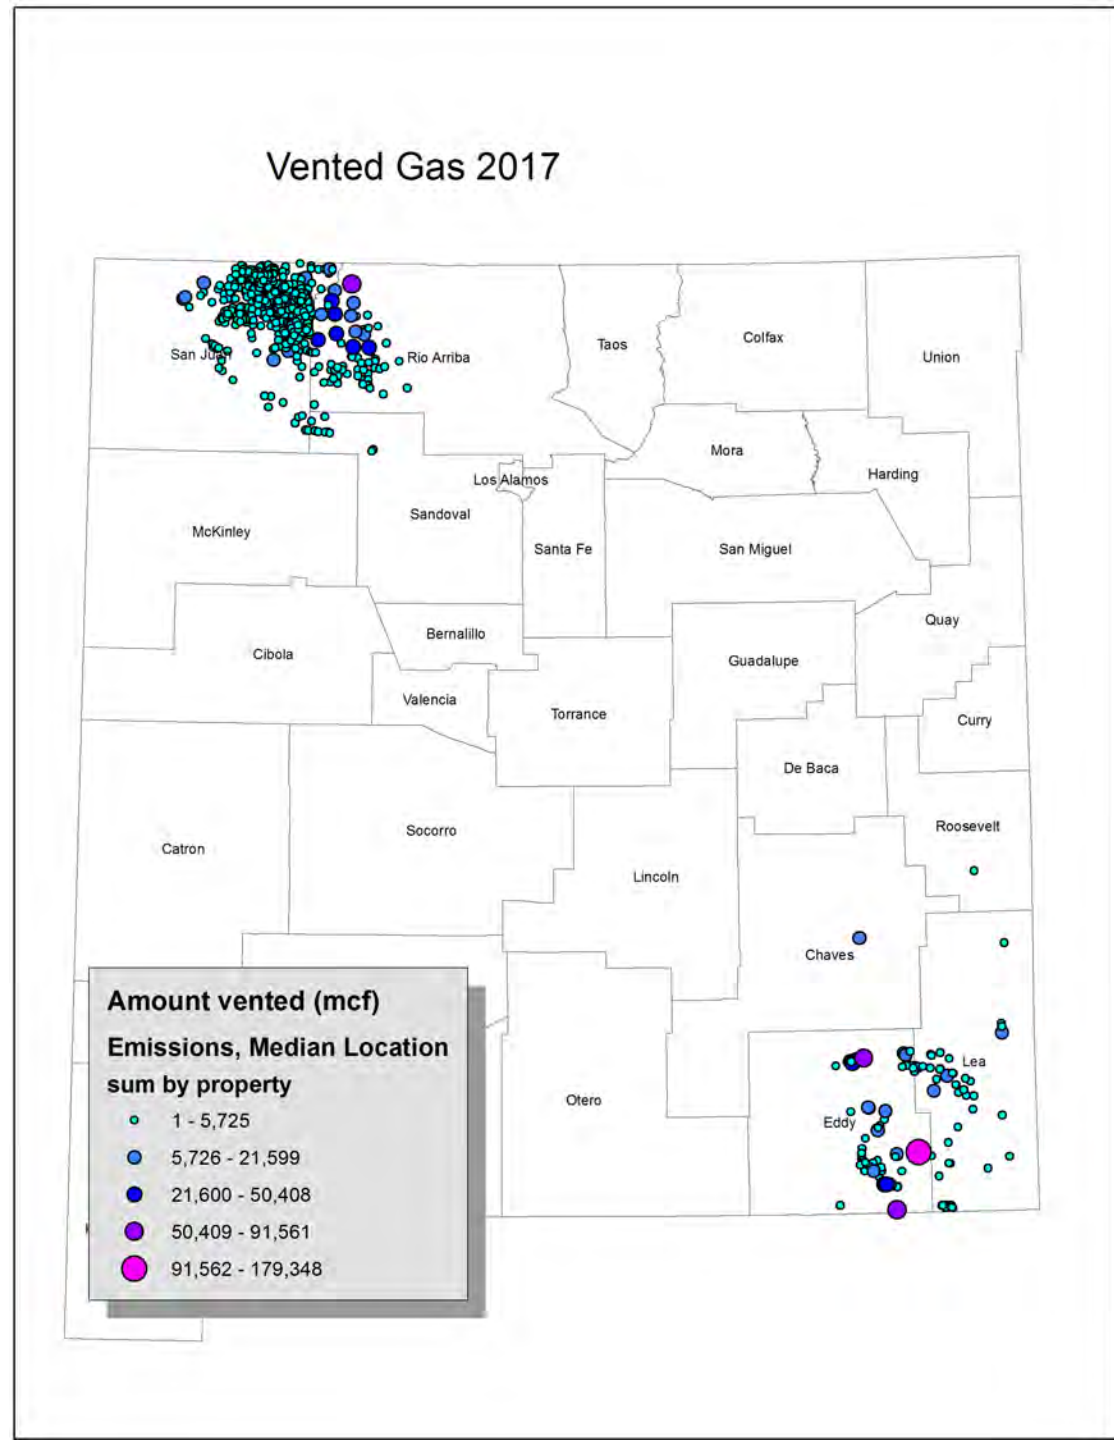

# Mapping Vented Gas

- Vented Gas is greatly reduced in NW NM through 2014-2019
- Vented Gas is greatly increased in SE NM through 2014-2019

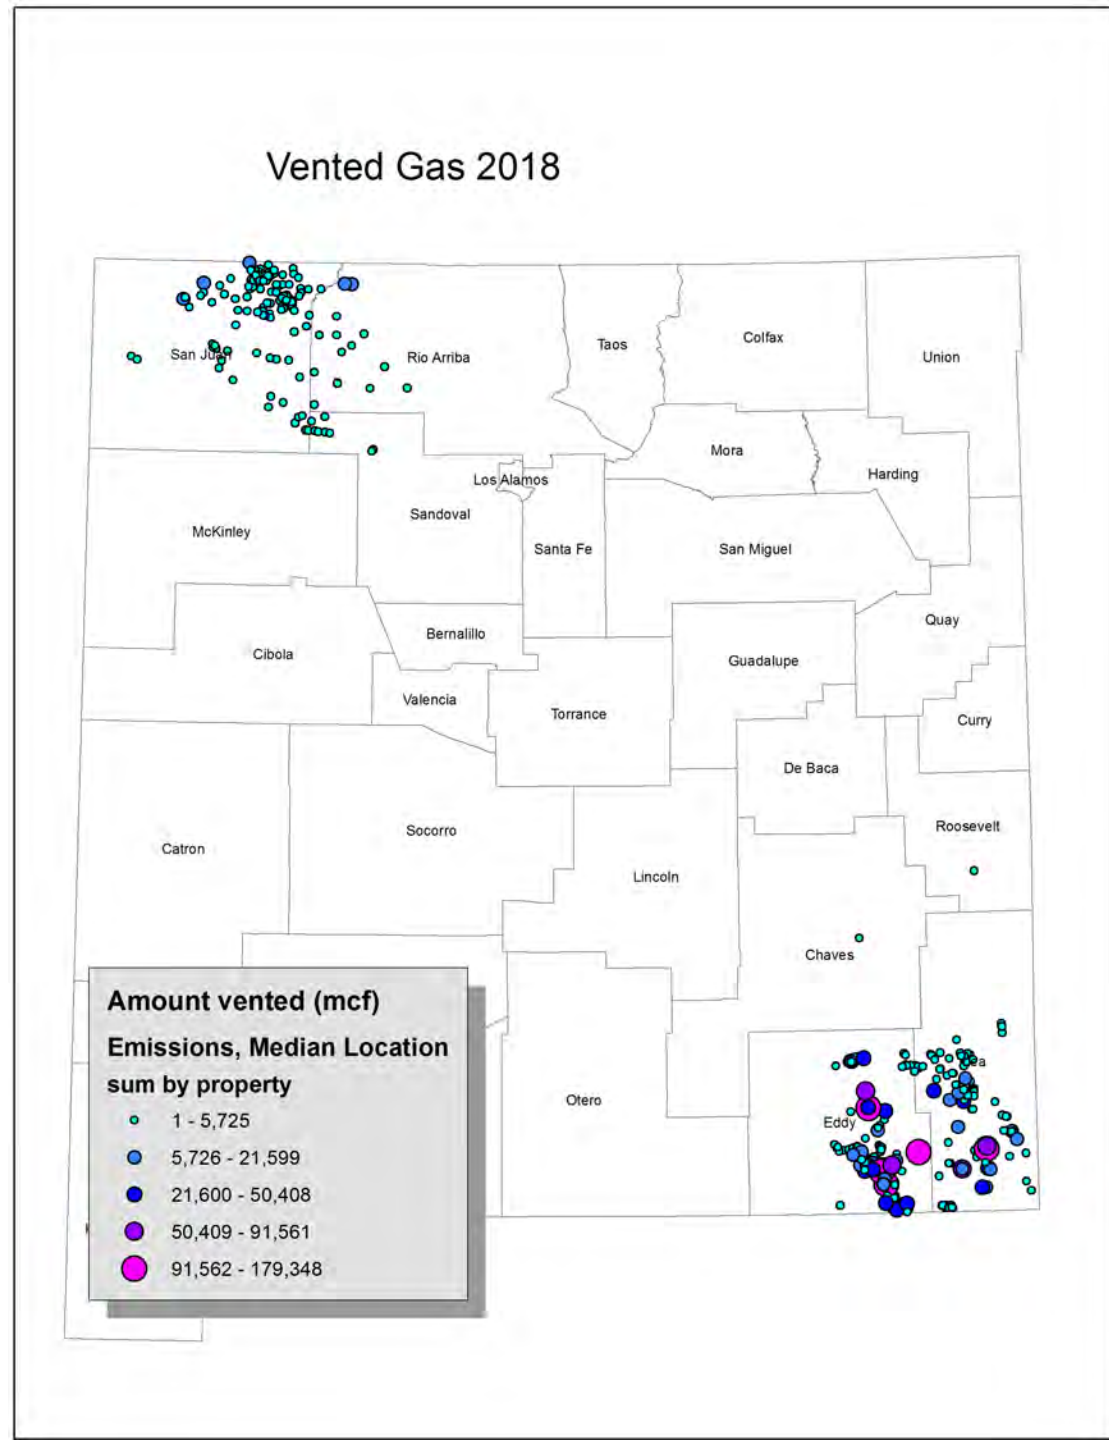

# Mapping Vented Gas

- Vented Gas is greatly reduced in NW NM through 2014-2019
- Vented Gas is greatly increased in SE NM through 2014-2019

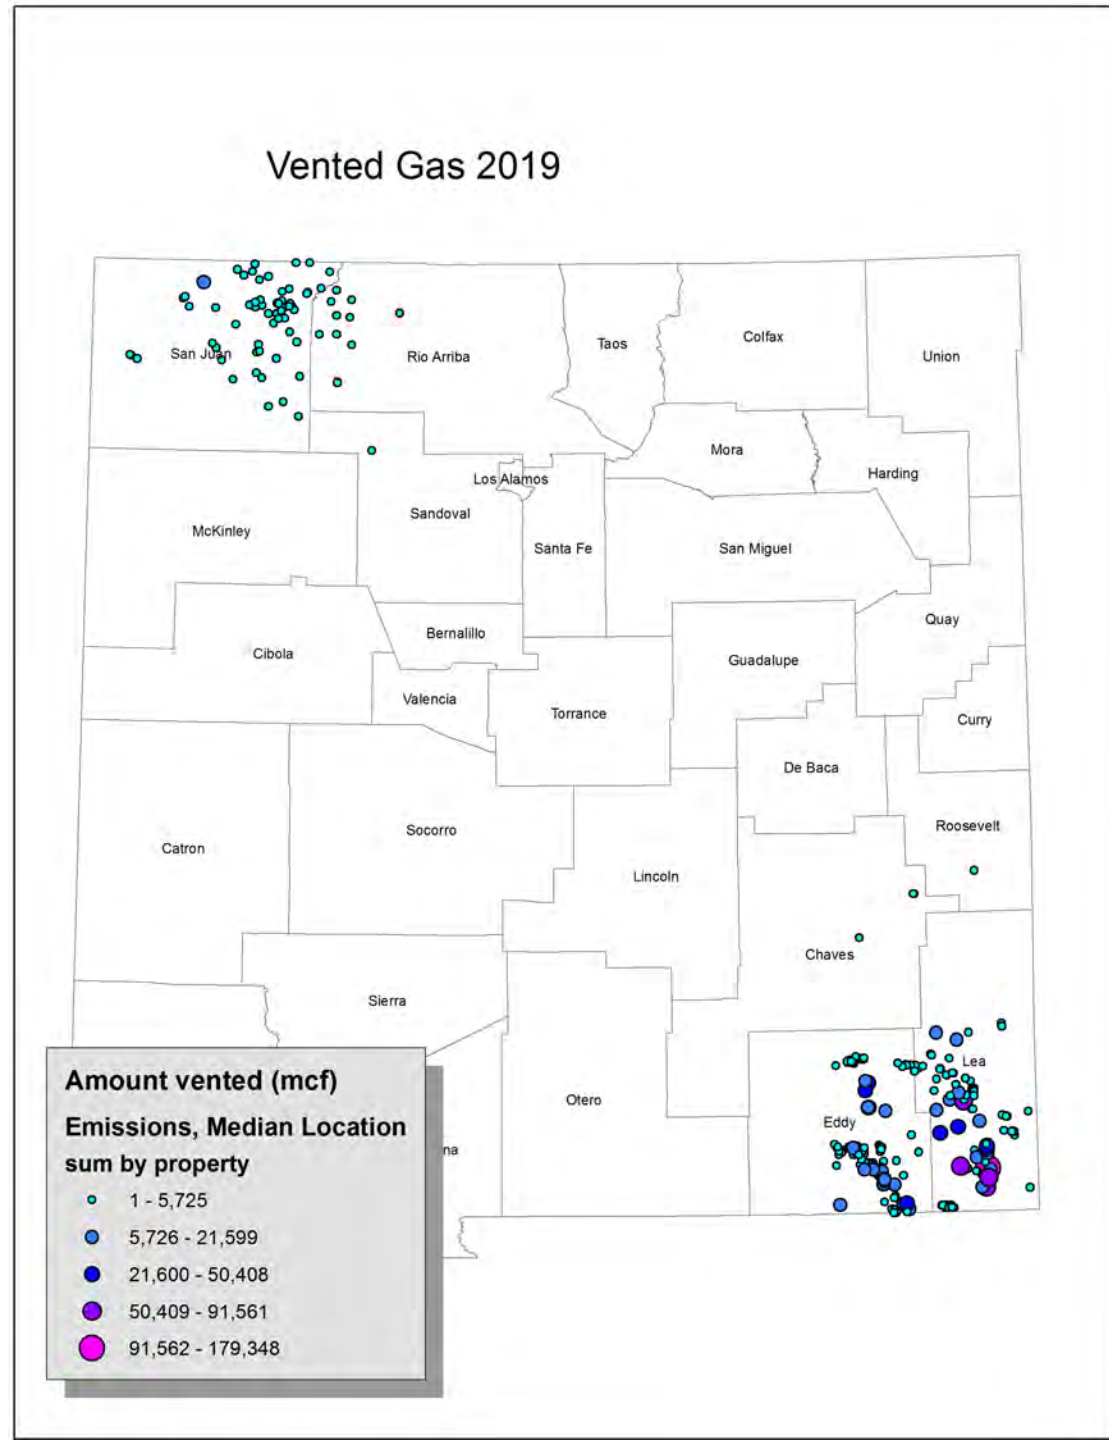

# Mapping Vented Gas

- Vented Gas is greatly reduced in NW NM through 2014-2019
- Vented Gas is greatly increased in SE NM through 2014-2019

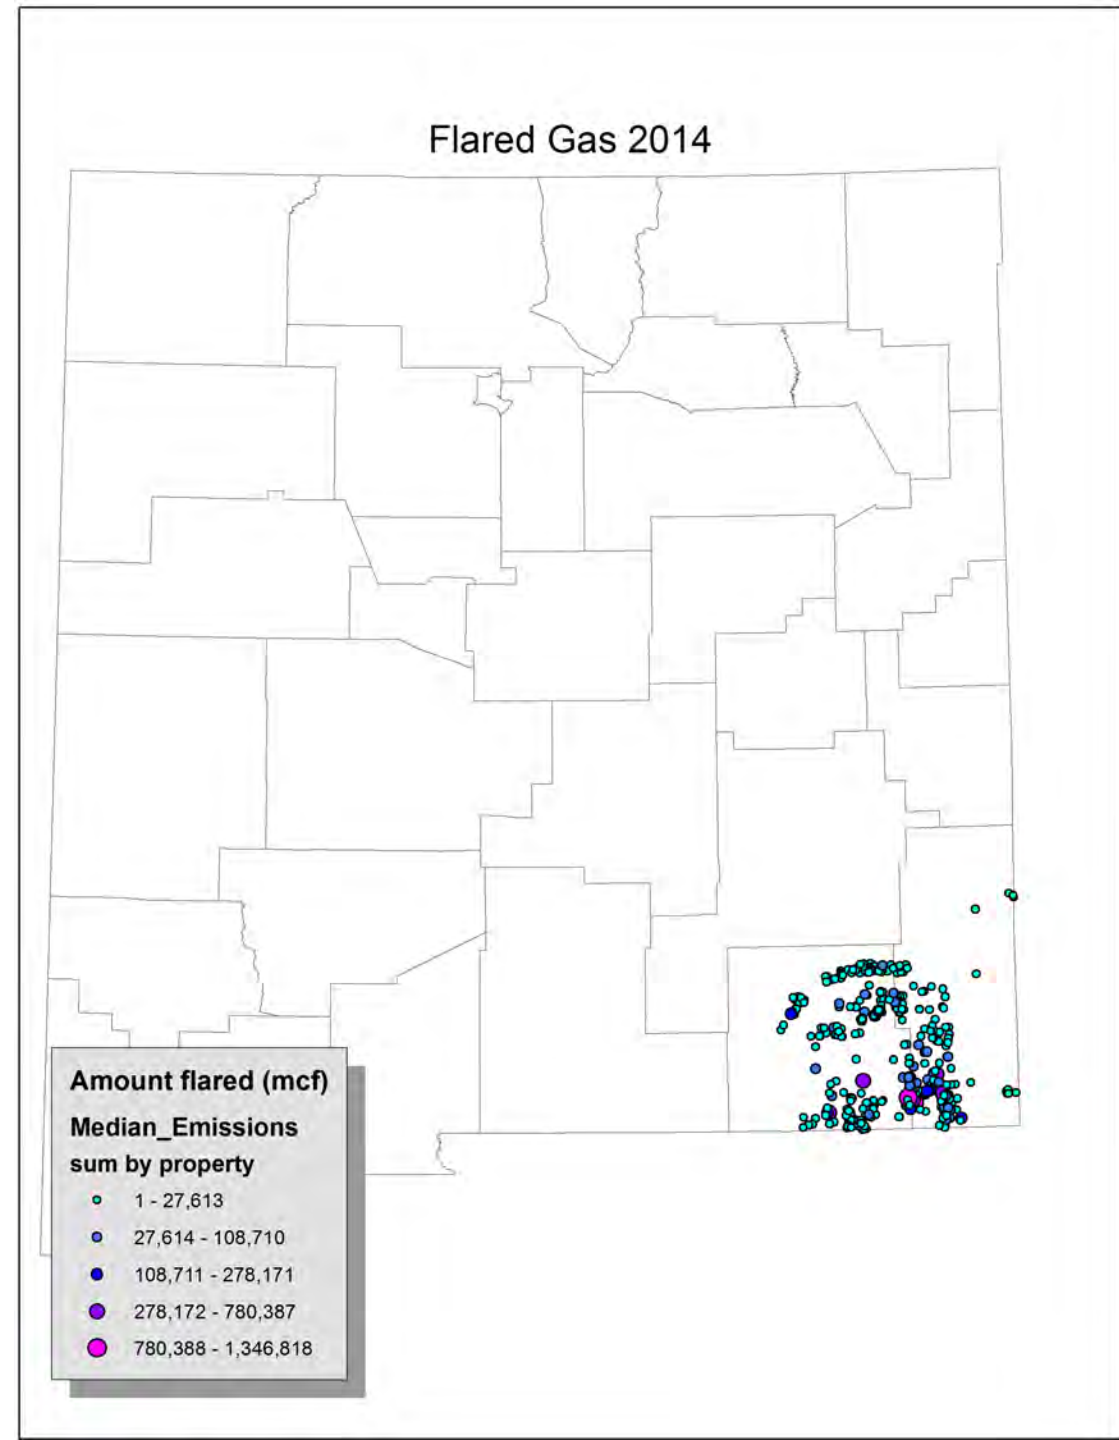

# Mapping Vented Gas

- Vented Gas is greatly reduced in NW NM through 2014-2019
- Vented Gas is greatly increased in SE NM through 2014-2019

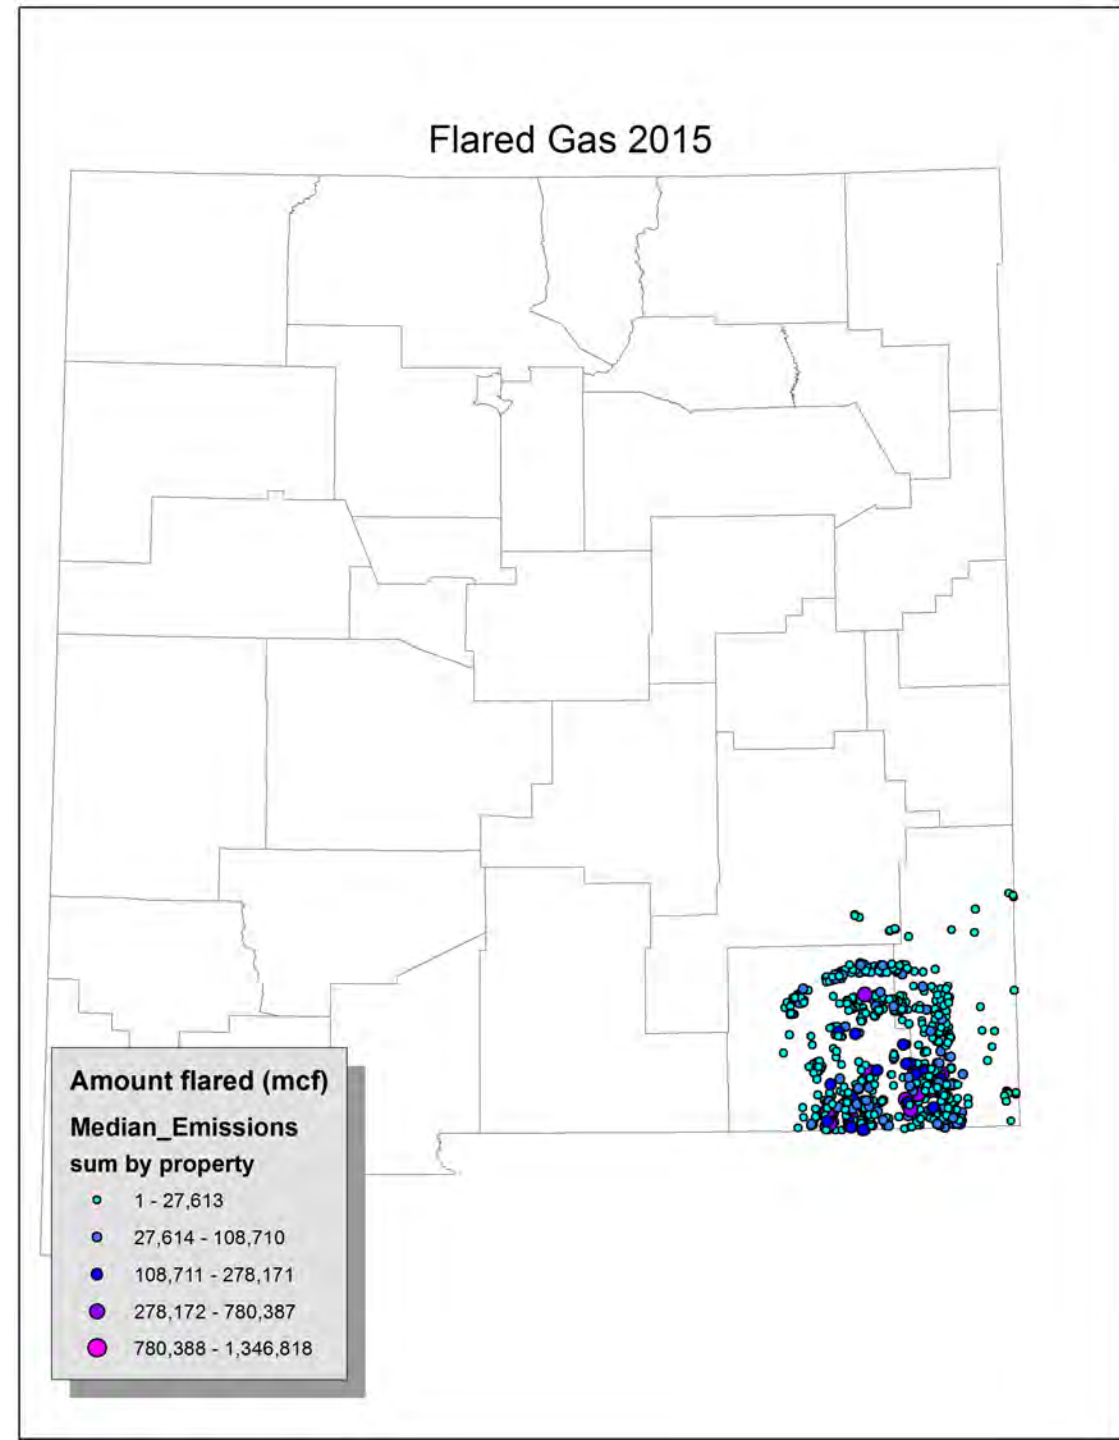

# Mapping Flared Gas

- Flared gas slightly increases in NW NM through 2014-2019
- Flared gas is greatly increased in SE NM through 2014-2019

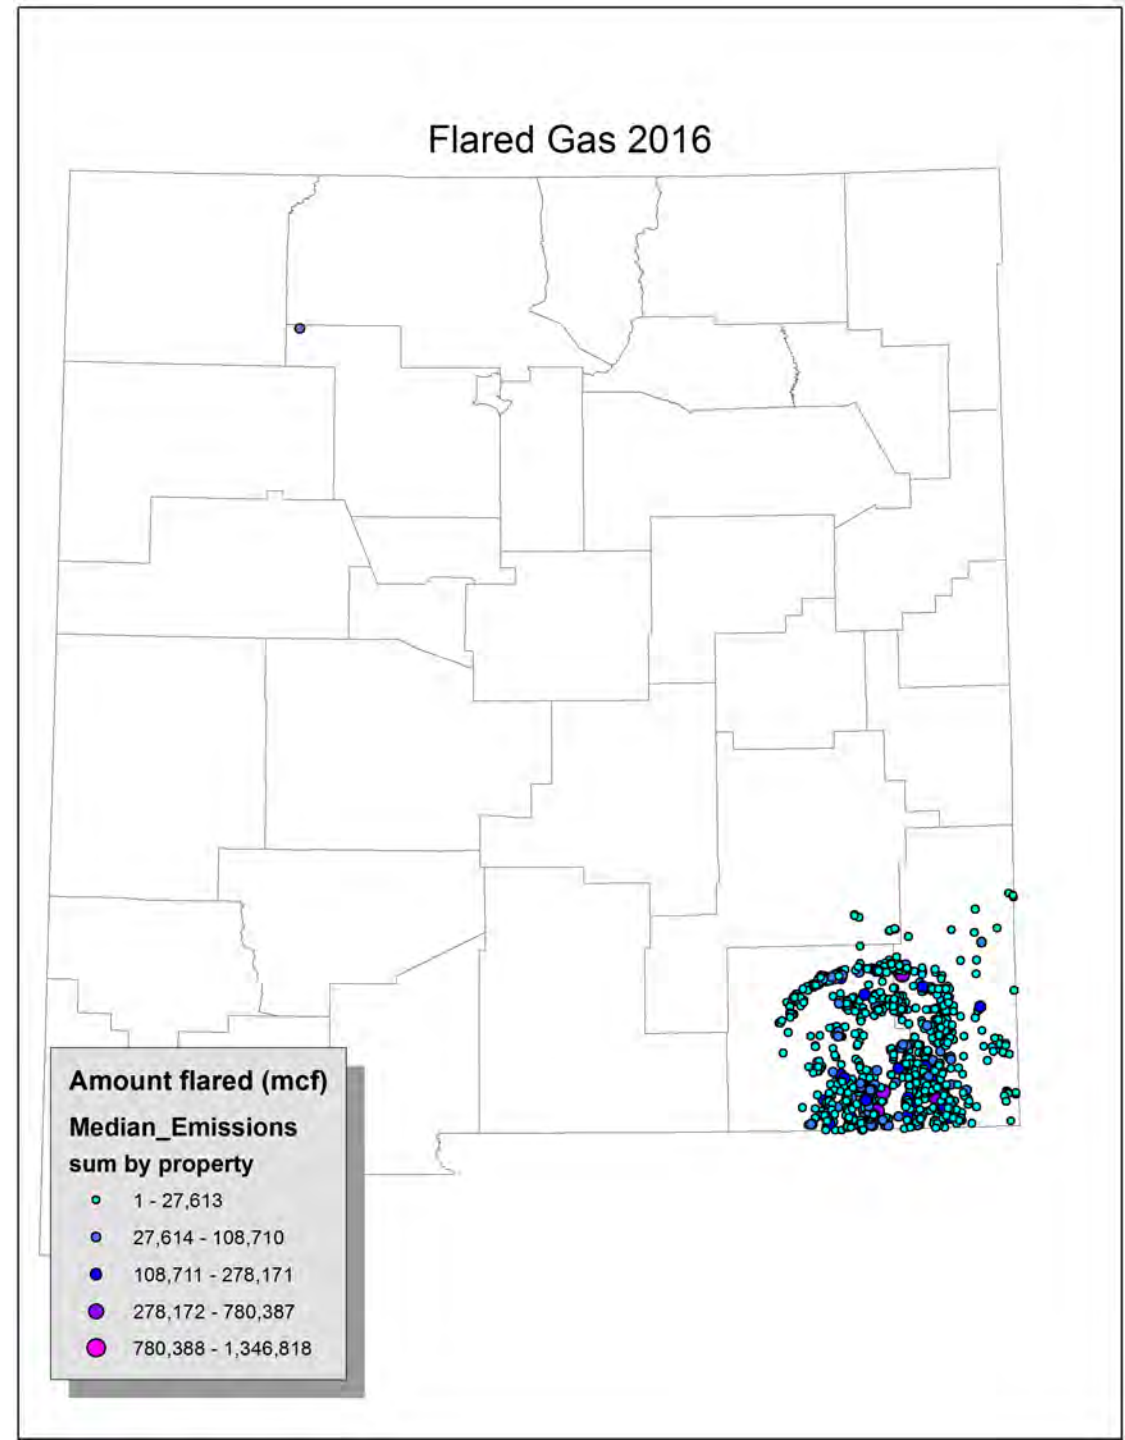

# Mapping Flared Gas

- Flared gas slightly increases in NW NM through 2014-2019
- Flared gas is greatly increased in SE NM through 2014-2019

# Mapping Flared Gas

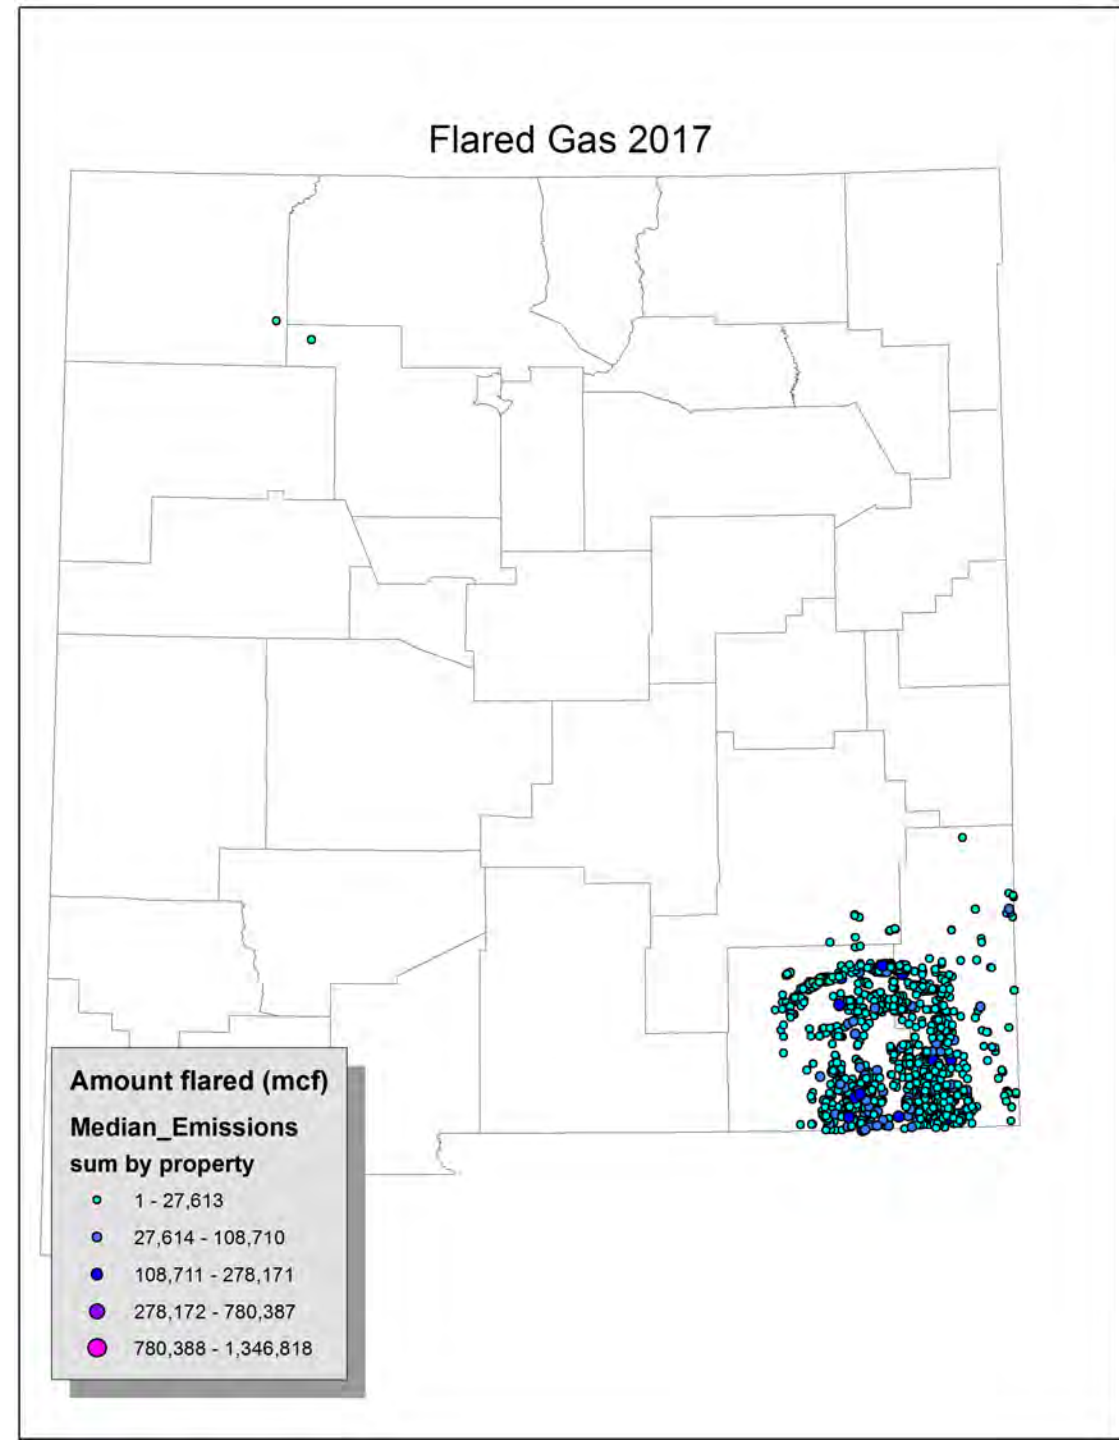

- Flared gas slightly increases in NW NM through 2014-2019
- Flared gas is greatly increased in SE NM through 2014-2019

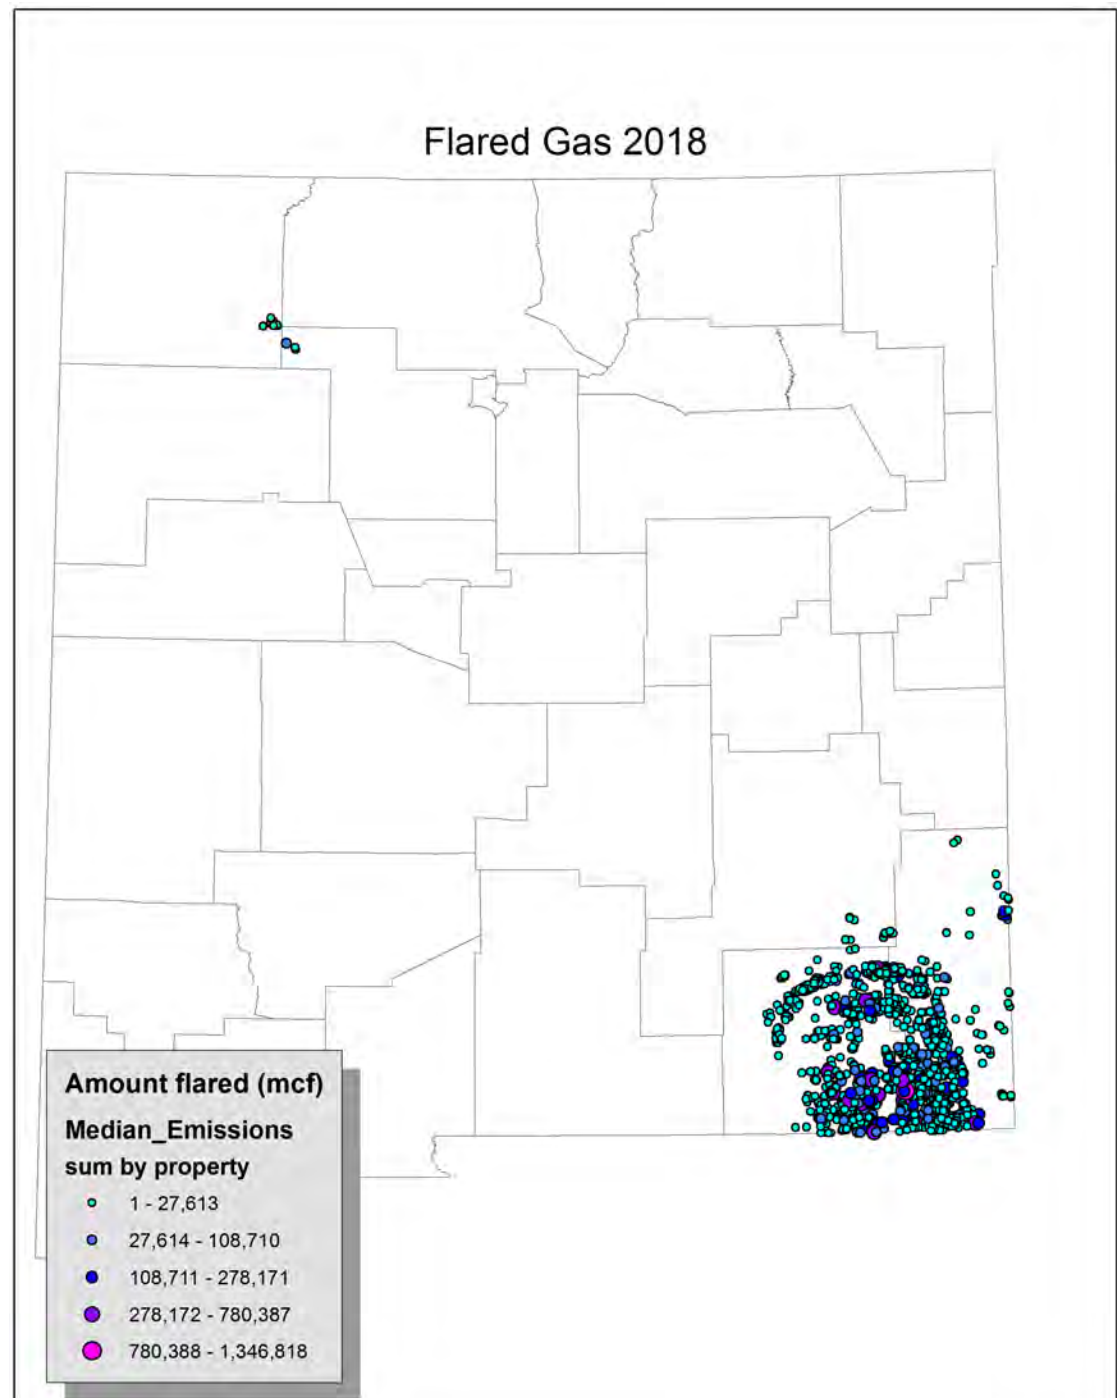

# Mapping Flared Gas

- Flared gas slightly increases in NW NM through 2014-2019
- Flared gas is greatly increased in SE NM through 2014-2019

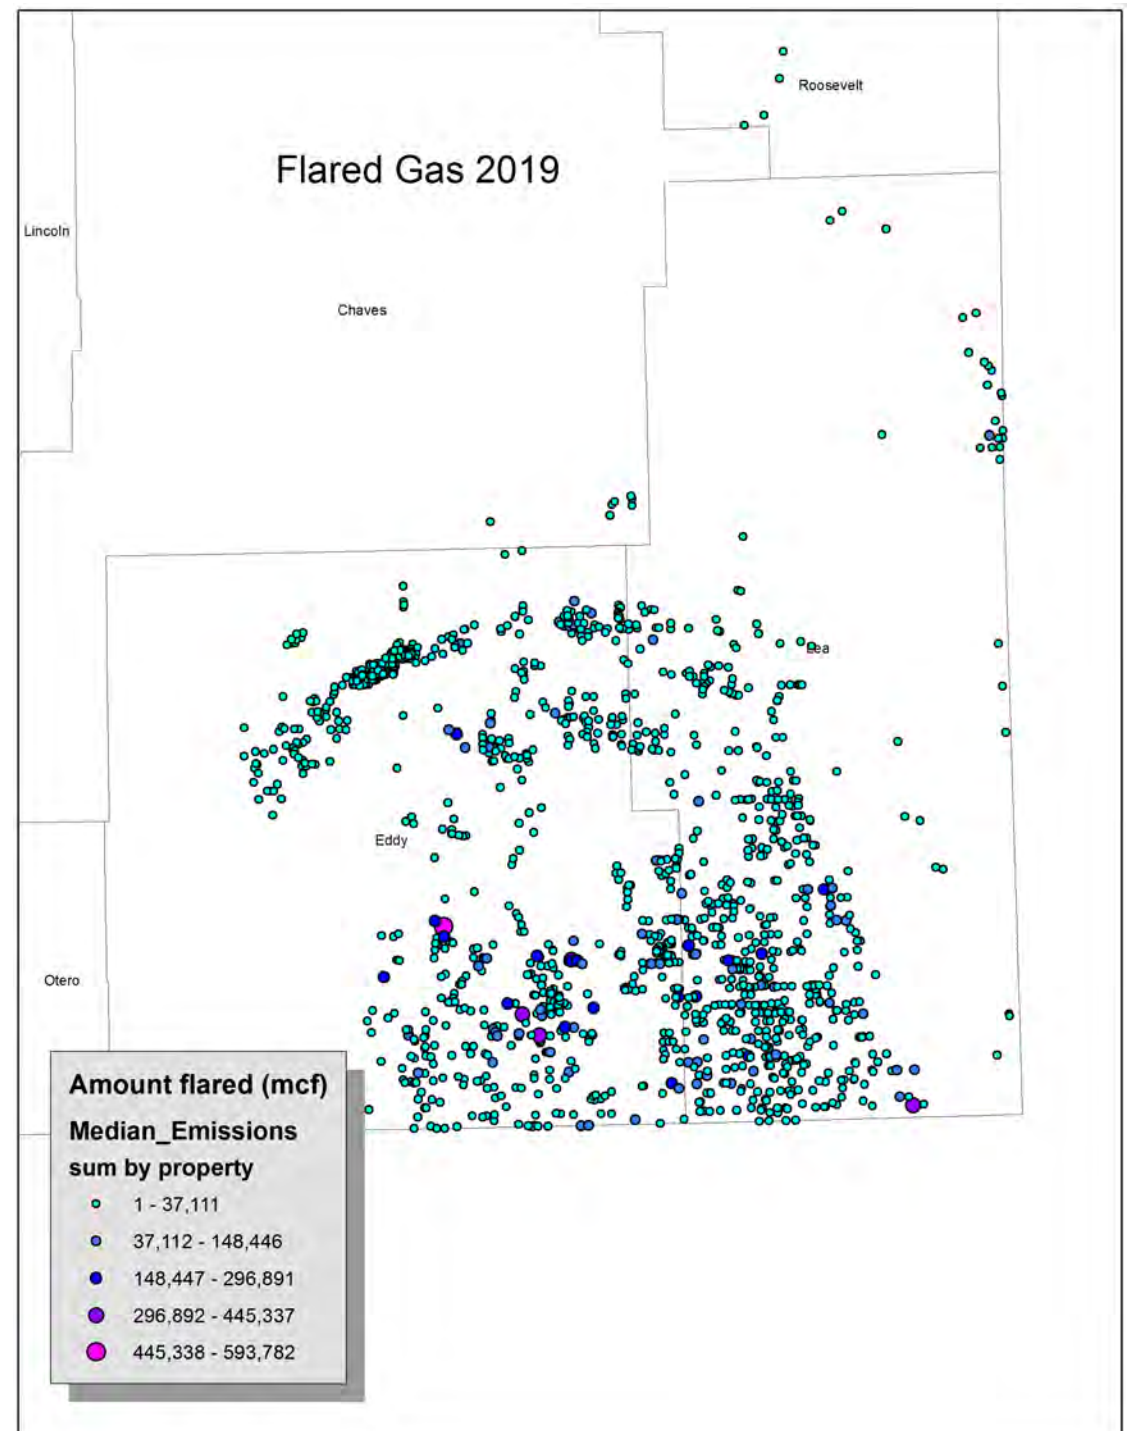

# Mapping Flared Gas

- Flared gas slightly increases in NW NM through 2014-2019
- Flared gas is greatly increased in SE NM through 2014-2019

### Emissions, Vented (mcf) Production

#### sum by property

- 1 - 5,000 (75)
- 5,001 - 10,000 (1)

#### Gas

- 0 - 150,000
- 150,001 - 500,000
- 500,001 - 1,000,000
- 1,000,001 - 1,500,000
- 1,500,001 - 10,000,000

### Production

#### Oil

- 0 - 500
- 501 - 1,000
- 1,001 - 5,000
- 5,001 - 10,000
- 10,001 - 300,000

# Data Issues

- Data quality needs improved - properties have no explicit spatial data so the boundaries or a median location can be inferred but this has issues\*
- Should we include all APIs or just active wells?
- Data is only by property, so we don't really know which well(s) would be involved
- Are there emissions from properties that don't have wells (ie., other types of infrastructure) - and are these in that data set?

# Future Work?

- We can do more with this data set if the MAP is so inclined
- We can draw bubble maps for individual flare and venting areas/months to determine if there are problem areas. For example, Cedar Lake has high emissions - can we figure out why
- We could mine the C-115 data along with other well files to see if particular types of processes contribute more to venting than others
- Tie data to OGRID (Plot using proxy ID's)
- Something else?
