

Produced Water Management in New Mexico

Rebecca Roose, Water Protection Division Director, NMED Bill Brancard, General Counsel, EMNRD Frank Scott, Statewide Projects Lead, OSE

Updated Oct. 30, 2019

Meeting Overview

□ 6:00 – 6:45 p.m. Presentation

- Produced Water Overview
- Regulation of Produced Water and the Produced Water Act (HB 546)
- NMED's Plan for Produced Water Act Implementation
- Transition to Q&A and Public Input

Public meeting schedule		
Oct. 15	National Hispanic Cultural Center Bank of America Theatre Albuquerque, NM	
Oct. 30	St. Francis Auditorium Santa Fe, NM	
Nov. 14	Pecos River Village Conf. Center Carousel House Carlsbad, NM	
Nov. 19	San Juan College Little Theatre Farmington, NM	
Nov. 25	New Mexico Farm & Ranch Heritage Museum Ventana Room Las Cruces, NM	

Meeting Overview

□ 6:45 – 7:30 p.m. Questions/Answers

Audience questions about the presentation, including state agency activities related to produced water management.

7:30 – 8:30 p.m. Public Input

- Please sign-up to make a public statement.
- All speakers will have up to 2 minutes to make remarks.
- Written input can be shared tonight (drop box) and by email to <u>pw.environment@state.nm.us</u>.

Meeting Objectives

Gather information from the public and answer questions about produced water PRIOR to initiating rulemaking.

Discuss opportunities to increase environmental and human health protection.

Clarify agencies' roles/responsibilities and review key provisions of the Produced Water Act (HB 546).

Beyond the Public Meetings

- NMED's targeted engagement with governments of 23 tribes/pueblos/nations
 - Letters to tribal leaders in September 2019
 - Discussions about produced water during face-to-face meetings with tribal leaders
 - Participation in upcoming meetings with tribal environmental directors

Produced Water Overview: What is it?

Graphic: Adapted from Society of Petroleum Engineers, "The hydraulic fracture water cycle."

Sources: U.S. Energy Information Administration and U.S. Geological Survey.

New Mexico law defines produced water as "fluid that is an incidental byproduct from drilling for or production of oil and gas."

Produced Water Overview: What's in it?

Common Constituents

- Salts
- Oil residues
- Sand/mud
- o *Metals*
- Carbon-based compounds such as solvents, surfactants, acids, and waxes
- Naturally occurring radioactive materials
- o Bacteria

Produced Water Overview: How much is generated?

For every barrel of oil produced, four to seven barrels of produced water are generated:

Produced Water Overview:

How much is generated?

- In 2018, industry in New Mexico generated 248 million barrels (10 billion gallons) of oil along with produced water totaling:
 - One billion barrels (or 42 billion gallons) in southeast corner of the state.
 - Twenty-two million barrels (or 946 million gallons) in the northwest corner of the state.

Key Provisions of the Produced Water Act

AN ACT	
AN ACT	
RELATING TO NATURAL RESOURCES; ENACTING THE PRODUCED WATER	t
ACT. ESTABLISHING CONTROL AND RESPONSIBILITY FOR FRODUCING	
ACT, DENING THE USE OF TREATED OR RECYCLED PRODUCED	
WATER; ALLOWING THE CONTRACT PROVISIONS RELATING TO	
WATER; DECLARING CERTAIN CONTAGE POLICY; AMENDING AND	
PRODUCED MATTERNS, AMENDING THE DUTIES OF THE OIL	
ADDING DEFINITIONS; ANALYTIC ENERGY, MINERALS AND NATURAL	L
CONSERVATION AND THE WATER QUALITY CONTROL

SECTION 1. A new section of Chapter 70 Mannes	
enacted to read:	av he
"SHORT TITLE Sections 1 through 5 of this act m	my De

- Eliminates legal vulnerabilities to New Mexico's surface/ground waters that existed prior to July 1, 2019, through:
 - Affirmative state permitting requirements;
 - Affirmative requirements for financial assurance; and
 - Clarified liability for spills.
- Removes obstacles to recycling of produced water.
- □ Gives EMNRD much-needed penalty authority.
- Explicitly requires that any use of produced water outside the oil and gas industry be regulated by NMED.
- Requires that the New Mexico Water Quality Control Commission (WQCC) adopt regulations for the discharge, handling, transport, storage, and recycling or treatment of produced water or byproduct thereof outside the oilfield.
- Does <u>not</u> specify what these regulations shall be or what the WQCC determines protective of water quality.

- □ Since HB 546 was passed, the State can now:
 - Address the significant gaps in liability and penalty authority
 - Develop comprehensive information regarding toxicity of fracking chemicals
 - Issue penalties for violations of EMNRD Oil Conservation Division regulations (as of January 1, 2020)

- Minimize fresh water usage and increase recycling by industry for increased climate change resiliency
- Reduce reliance on salt water injection wells for disposal
- Address leaks from impoundments, pipeline ruptures, and illegal dumping
- Better protect groundwater and surface water resources
- Better protect against human and wildlife exposure to contaminants
- Advance aggressive renewable energy targets through extraction of materials like lithium – used in batteries and solar panels – from produced water

Produced Water Act Implementation

- NMED is not currently authorizing the discharge of *treated* produced water for any purpose, including:
 - × Surface waters
 - × Drinking water and aquifer storage
 - × Livestock watering
 - Irrigation for any crops, including food crops
 - × Dust or ice control on roads
 - × Construction
- NMED will never authorize *untreated* produced water to be used outside of oil and gas for any purpose

- NMED is preparing to implement HB 546
- NMED is partnering with research and academic institutions to fill critical science and technology gaps related to the safe treatment and use of produced water
- NMED is engaging the public to talk about the Produced Water Act and developing informative resources on the topic

https://www.env.nm.gov/new-mexico-produced-water/

Produced Water Act Implementation

Phase 1

- Public meetings
- Tribal engagement
- Collaboration with technical experts to fill science and technology gaps

□ Phase 2 (after public meetings and informed by research findings)

- Develop science-based regulations for "discharge, handling, transport, storage, and recycling or treatment of produced water or byproduct thereof outside the oilfield" (excerpt from HB 546)
- Propose draft regulations for formal rulemaking before the WQCC, including public notice and comment period and opportunity for tribal consultation

Examples of NMED's research questions related to filling the science and technology gaps:

- What contaminants are in the produced water generated in NM?
- How can the produced water be treated to be safe?
- What changes are needed to our state water quality standards to protect water resources and human health?

Produced Water Act Implementation

NM BE BOLD. Shape the Future. New Mexico State University

Advancing Scientific and Technological Solutions in Treatment and Reuse of Produced Water

The New Mexico Produced Water Research Consortium (NM-PWRC) is a collaboration between the New Mexico Environment Department (NMED) and New Mexico State University (NMSU). Through this consortium, New Mexico will continue to lead the country in advancing scientific and technological solutions related to the treatment and reuse of produced water generated by the oil and gas industry.

The consortium will develop a framework to fill scientific and technical knowledge gaps necessary to establish regulations and policies for the treatment of produced water. Such regulations and policies must be protective of public health and the environment while encouraging the oil and natural gas industry to rely less on fresh water and more on reuse of produced water. "The multidisciplinary research approach that we are proposing is specifically needed to fill existing data gaps to inform policy decisions," said NMSU Chancellor Dan Arvizu. "NMSU is excited to be at the very forefront of research in this area."

Quick Facts

- In 2018, over 42 billion gallons of produced water were created in New Mexico's Permian Basin.
- House Bill 546, includes the Produced Water Act, and went into effect July 1, 2019.
- New Mexico Environment Department (NMED) and New Mexico State University (NMSU) entered into a memorandum of understanding on

Details available at https://nmpwrc.nmsu.edu/.

State Agency Contacts

NMED contacts for treatment of produced water for off oil field use:

- Rebecca Roose, Water Protection Division Director, <u>Rebecca.Roose@state.nm.us</u>
- Annie Maxfield, Assistant General Counsel, <u>Annie.Maxfield@state.nm.us</u>

EMNRD contacts for management of produced water within the oil field:

- Adrienne Sandoval, Oil Conservation Division Director, <u>Adrienne.Sandoval@state.nm.us</u>
- Bill Brancard, General Counsel, <u>Bill.Brancard@state.nm.us</u>

OSE contacts for water rights issues related to produced water management:

- John Romero, Water Resource Allocation Program Director, John.Romero2@state.nm.us
- Owen Kellum, Administrative Litigation Unit Attorney, <u>Owen.Kellum@state.nm.us</u>

Transition to Q&A and Public Input

□ 6:45 – 7:30 p.m. Questions/Answers

 Audience questions about the presentation, including state agency activities related to produced water management

7:30 – 8:30 p.m. Public Input

- Please sign-up to make a public statement.
- All speakers will have up to 2 minutes to make remarks.
- Written input can be shared tonight (drop box) and by email to <u>pw.environment@state.nm.us</u>.

Thank you for engaging with us!

²³ Appendix for Q&A Session

To maximize time during Public Meetings for audience participation, the following slides are not part of the NMED/EMNRD/OSE presentation but may be displayed during the Question and Answer Session if applicable.

Q: What is the Environment Department's responsibility for produced water management?

A: House Bill 546, aka the Produced Water Act, requires NMED to draft regulations to present before the Water Quality Control Commission (WQCC) that address the discharge, handling, transport, storage, and recycling or treatment of produced water or byproduct thereof outside the oilfield.

In adopting regulations, the Water Quality Act requires the WQCC to consider:

- Character and degree of injury to or interference with health, welfare, environment and property;
- Public interest, including the social and economic value of the sources of water contaminants;
- Technical practicability and economic reasonableness of reducing or eliminating water contaminants from the sources involved and previous experience with equipment and methods available to control the water contaminants involved;
- Successive uses, including domestic, commercial, industrial, pastoral, agricultural, wildlife and recreational uses;
- Feasibility of a user or a subsequent user treating the water before a subsequent use;
- Property rights and accustomed uses; and
- **•** Federal water quality requirements.

Q: How is NMED involved with the Produced Water Research Consortium?

A: New Mexico State University is managing the Consortium. NMED will be involved as a member of the Government Advisory Board (see diagram below) and in other activities related to implementation of the <u>NMED-NMSU</u> <u>Memorandum of Understanding</u>.

Produced Water Engagement

Q: What treatment is needed for use of produced water outside the oil and gas field?

A: The level of treatment necessary to protect human health and the environment depends upon the intended end use of the treated water. "Fit for purpose" research to support future regulations will address the range of factors that vary based on the end use. Learn more about "fit for purpose" research in the Ground Water Protection Council's 2019 *Produced Water Report*, available at http://www.gwpc.org/producedwater.

Q: Where do oil and gas companies get fresh water?

A: They buy or lease water needed for their operations. Fresh water comes from either surface waters or groundwater, e.g., the Pecos River and Ogalalla Aquifer.

Q: Are NM aquifers suffering a strain due to Oil and Gas Productions?

A: Yes, and the State is examining ways to encourage producers to use other sources before fresh water, including through implementation of HB 546, the Produced Water Act.

Q: Where is produced water generated?

A: In New Mexico, oil and gas production activity is in the Permian Basin in the southeast corner of the State, and the San Juan Basin in the northwest corner.

Q: How many acre-feet/gallons/barrels of water does it take to frack one well?

A: Depending on a number of factors, including the location of the well, up to 31 acre-feet/10 million gallons/240,509 barrels of water may be needed.

Q: Is all the water used for fracking fresh water?

A: No, some water is recycled produced water.

Q: What is the role of the Energy, Minerals and Natural Resources Department (EMNRD) in produced water management?

A: Under the Oil and Gas Act, the Oil Conservation Division within EMNRD regulates the handling and disposal of produced water within the oil and gas industry in New Mexico. This includes underground injection control (UIC) wells for produced water disposal, reuse through enhanced recovery operations and recycling and reuse in oil and gas drilling operations. EMNRD anticipates minor changes to existing rules to comply with HB 546.

Q: What is the role of the Office of the State Engineer (OSE) in produced water management?

A: HB 546 and existing regulations confirm no OSE permit is required to use produced water. The use of produced water is considered "disposition by use," not a "beneficial use" for establishing and maintaining a water right. The OSE will work with NMED as they draft regulations that address the discharge, handling, transport, storage, and recycling or treatment of produced water outside of oil and gas industry uses. As the NMED develops rules, the OSE will examine which statutes and regulations might need to be changed to facilitate those NMED-permitted uses in the future. The OSE will work with our sibling agencies to reduce the use of freshwater resources for oil and gas production and reduce the amount of produced water being injected in disposal wells.

Q: What is the Office of the State Engineer doing to change the trend of water use for oil and gas production activities?

A: In 2018, the OSE rescinded the policy of issuing multiple 72-12-1.3 permits (mineral exploration). Since then there has been an approximate 70% reduction in the issuance of these permits.

The OSE is currently reviewing the following actions to further reduce the use of freshwater resources for oil and gas activities:

- Approval of water lease permits for less time than requested based on situation
- Require oil and gas applicants to demonstrate need for fresh water vs saline/other water
