Re: Chevron U.S.A. Inc.
Revision to NSR Permit No. 6832-M7
Salado Draw 23 CS and TB
Jal, Lea County

Dear Ms. Romero:

Chevron U.S.A. Inc. is submitting a revision to NSR Permit No. 6832-M7 for the Salado Draw 23 CS and TB facility. Attached are the signed and certified Universal Application forms along with the appropriate attachments. In this revision application, gas analyses were updated, tank working and standing emissions calculations were updated and due to the updated gas analyses, the glycol dehydrator emissions estimation and the ProMax simulation were rerun with the updated values. The site is located in a rural area approximately 27.1 miles southwest of Jal, NM.

Please contact me at (512) 255-9999 or e-mail jmechell@waid.com, or Mr. Keaton Byars at (432) 687-7448 or e-mail KBQT@chevron.com if you have any questions.

Sincerely,

A handwritten signature in blue ink that reads "Justin K. Mechell".

Justin K. Mechell, P.E.
Senior Engineer

Universal Air Quality Permit Application

Use this application for NOI, NSR, or Title V sources.

Use this application for: the initial application, modifications, technical revisions, and renewals. For technical revisions, complete Sections, 1-A, 1-B, 2-E, 3, 9 and any other sections that are relevant to the requested action; coordination with the Air Quality Bureau permit staff prior to submittal is encouraged to clarify submittal requirements and to determine if more or less than these sections of the application are needed. Use this application for streamline permits as well. **See Section 1-I for submittal instructions for other permits.**

This application is submitted as (check all that apply): ☐ Request for a No Permit Required Determination (no fee)
☐ **Updating** an application currently under NMED review. Include this page and all pages that are being updated (no fee required).
 Construction Status: ☐ Not Constructed ☒ Existing Permitted (or NOI) Facility ☐ Existing Non-permitted (or NOI) Facility
 Minor Source: ☐ a NOI 20.2.73 NMAC ☒ 20.2.72 NMAC application or revision ☐ 20.2.72.300 NMAC Streamline application
 Title V Source: ☐ Title V (new) ☐ Title V renewal ☐ TV minor mod. ☐ TV significant mod. TV Acid Rain: ☐ New ☐ Renewal
 PSD Major Source: ☐ PSD major source (new) ☐ minor modification to a PSD source ☐ a PSD major modification

Acknowledgements:

- ☒ I acknowledge that a pre-application meeting is available to me upon request. ☐ Title V Operating, Title IV Acid Rain, and NPR applications have no fees.
- ☒ \$500 NSR application Filing Fee enclosed **OR** ☐ The full permit fee associated with 10 fee points (required w/ streamline applications).
- ☒ Check No.: **61212** in the amount of **\$500.00**
- ☒ I acknowledge the required submittal format for the hard copy application is printed double sided 'head-to-toe', 2-hole punched (except the Sect. 2 landscape tables is printed 'head-to-head'), numbered tab separators. Incl. a copy of the check on a separate page.
- ☒ I acknowledge there is an annual fee for permits in addition to the permit review fee: www.env.nm.gov/air-quality/permit-fees-2/.
- ☐ This facility qualifies for the small business fee reduction per 20.2.75.11.C. NMAC. The full \$500.00 filing fee is included with this application and I understand the fee reduction will be calculated in the balance due invoice. The Small Business Certification Form has been previously submitted or is included with this application. (Small Business Environmental Assistance Program Information: www.env.nm.gov/air-quality/small-biz-eap-2/.)

Citation: Please provide the **low level citation** under which this application is being submitted: **20.2.72.200 A. NMAC** (e.g. application for a new minor source would be 20.2.72.200.A NMAC, one example for a Technical Permit Revision is 20.2.72.219.B.1.b NMAC, a Title V acid rain application would be: 20.2.70.200.C NMAC)

c	The designated Air permit Contact will receive all official correspondence (i.e. letters, permits) from the Air Quality Bureau.	

Section 1-B: Current Facility Status

1.a	Has this facility already been constructed? ☒ Yes ☐ No	1.b If yes to question 1.a, is it currently operating in New Mexico? ☒ Yes ☐ No
2	If yes to question 1.a, was the existing facility subject to a Notice of Intent (NOI) (20.2.73 NMAC) before submittal of this application? ☐ Yes ☒ No	If yes to question 1.a, was the existing facility subject to a construction permit (20.2.72 NMAC) before submittal of this application? ☒ Yes ☐ No
3	Is the facility currently shut down? ☐ Yes ☒ No	If yes, give month and year of shut down (MM/YY):
4	Was this facility constructed before 8/31/1972 and continuously operated since 1972? ☐ Yes ☒ No	
5	If Yes to question 3, has this facility been modified (see 20.2.72.7.P NMAC) or the capacity increased since 8/31/1972? ☐ Yes ☐ No ☒ N/A	
6	Does this facility have a Title V operating permit (20.2.70 NMAC)? ☐ Yes ☒ No	If yes, the permit No. is: P-
7	Has this facility been issued a No Permit Required (NPR)? ☐ Yes ☒ No	If yes, the NPR No. is:
8	Has this facility been issued a Notice of Intent (NOI)? ☐ Yes ☒ No	If yes, the NOI No. is:
9	Does this facility have a construction permit (20.2.72/20.2.74 NMAC)? ☒ Yes ☐ No	If yes, the permit No. is: 6832-M7
10	Is this facility registered under a General permit (GCP-1, GCP-2, etc.)? ☐ Yes ☒ No	If yes, the register No. is:

Section 1-C: Facility Input Capacity & Production Rate

1	What is the facility's maximum input capacity, specify units (reference here and list capacities in Section 20, if more room is required)			
a	Current	Hourly: 937.5 bbl/hr condensate 2,312.5 bbl/hr water 3.625 MMscf/hr gas	Daily: 22,500 bbl/day condensate 55,500 bbl/day water 87 MMscf/day gas	Annually: 8,212,500 bbl/yr condensate 20,257,500 bbl/yr water 31,755 MMscf/yr gas
b	Proposed	Hourly: 937.5 bbl/hr condensate 2,312.5 bbl/hr water 1.875 MMscf/hr gas	Daily: 22,500 bbl/day condensate 55,500 bbl/day water 45 MMscf/day gas	Annually: 8,212,500 bbl/yr condensate 20,257,500 bbl/yr water 16,425 MMscf/yr gas
2	What is the facility's maximum production rate, specify units (reference here and list capacities in Section 20, if more room is required)			
a	Current	Hourly: 937.5 bbl/hr condensate 2,312.5 bbl/hr water 3.625 MMscf/hr gas	Daily: 22,500 bbl/day condensate 55,500 bbl/day water 87 MMscf/day gas	Annually: 8,212,500 bbl/yr condensate 20,257,500 bbl/yr water 31,755 MMscf/yr gas
b	Proposed	Hourly: 937.5 bbl/hr condensate 2,312.5 bbl/hr water 1.875 MMscf/hr gas	Daily: 22,500 bbl/day condensate 55,500 bbl/day water 45 MMscf/day gas	Annually: 8,212,500 bbl/yr condensate 20,257,500 bbl/yr water 16,425 MMscf/yr gas

Section 1-D: Facility Location Information

1	Section: 14	Range: 32E	Township: 26S	County: Lea	Elevation (ft): 3157
2	UTM Zone: ☐ 12 or ☒ 13			Datum: ☐ NAD 27 ☒ NAD 83 ☐ WGS 84	
a	UTM E (in meters, to nearest 10 meters): 627889			UTM N (in meters, to nearest 10 meters): 3545246	
b	AND Latitude (deg., min., sec.): 32, 2, 10.7			Longitude (deg., min., sec.): -103, 38, 43.1	
3	Name and zip code of nearest New Mexico town: Jal, 88252				
4	Detailed Driving Instructions from nearest NM town (attach a road map if necessary): From Jal, NM intersection of S 3 rd St. and NM-128W, head west on NM-128W for 29.77 mi. Turn left on Orla Rd./J-1 and continue for 12.64 miles. Turn left onto unnamed road and after 2.86 miles, the site will be on the left.				
5	The facility is 27.1 (distance) miles SW (direction) of Jal, NM (nearest town).				
6	Status of land at facility (check one): ☐ Private ☐ Indian/Pueblo ☒ Federal BLM ☐ Federal Forest Service ☐ Other (specify)				
7	List all municipalities, Indian tribes, and counties within a ten (10) mile radius (20.2.72.203.B.2 NMAC) of the property on which the facility is proposed to be constructed or operated: Lea County and Eddy County, NM and Loving County, TX				
8	20.2.72 NMAC applications only : Will the property on which the facility is proposed to be constructed or operated be closer than 50 km (31 miles) to other states, Bernalillo County, or a Class I area (see www.env.nm.gov/aqb/modeling/classIareas.html)? ☒ Yes ☐ No (20.2.72.206.A.7 NMAC) If yes, list all with corresponding distances in kilometers: Texas - 2.5 miles				
9	Name nearest Class I area: Carlsbad Caverns National Park				
10	Shortest distance (in km) from facility boundary to the boundary of the nearest Class I area (to the nearest 10 meters): 44 miles				
11	Distance (meters) from the perimeter of the Area of Operations (AO is defined as the plant site inclusive of all disturbed lands, including mining overburden removal areas) to nearest residence, school or occupied structure: >2 miles				
12	Method(s) used to delineate the Restricted Area: "Restricted Area" is an area to which public entry is effectively precluded. Effective barriers include continuous fencing, continuous walls, or other continuous barriers approved by the Department, such as rugged physical terrain with steep grade that would require special equipment to traverse. If a large property is completely enclosed by fencing, a restricted area within the property may be identified with signage only. Public roads cannot be part of a Restricted Area.				
13	Does the owner/operator intend to operate this source as a portable stationary source as defined in 20.2.72.7.X NMAC? ☐ Yes ☒ No A portable stationary source is not a mobile source, such as an automobile, but a source that can be installed permanently at one location or that can be re-installed at various locations, such as a hot mix asphalt plant that is moved to different job sites.				
14	Will this facility operate in conjunction with other air regulated parties on the same property? ☒ No ☐ Yes If yes, what is the name and permit number (if known) of the other facility?				

Section 1-E: Proposed Operating Schedule (The 1-E.1 & 1-E.2 operating schedules may become conditions in the permit.)

1	Facility maximum operating ($\frac{\text{hours}}{\text{day}}$): 24	($\frac{\text{days}}{\text{week}}$): 7	($\frac{\text{weeks}}{\text{year}}$): 52	($\frac{\text{hours}}{\text{year}}$): 8760
2	Facility's maximum daily operating schedule (if less than 24 $\frac{\text{hours}}{\text{day}}$)? Start:		☐ AM ☐ PM	End: ☐ AM ☐ PM
3	Month and year of anticipated start of construction: October 2021			
4	Month and year of anticipated construction completion: October 2021			
5	Month and year of anticipated startup of new or modified facility: October 2021			
6	Will this facility operate at this site for more than one year? ☒ Yes ☐ No			

Section 1-F: Other Facility Information

1	Are there any current Notice of Violations (NOV), compliance orders, or any other compliance or enforcement issues related to this facility? ☐ Yes ☒ No If yes, specify:		
a	If yes, NOV date or description of issue:	NOV Tracking No:	
b	Is this application in response to any issue listed in 1-F, 1 or 1a above? ☐ Yes ☒ No If Yes, provide the 1c & 1d info below:		
c	Document Title:	Date:	Requirement # (or page # and paragraph #):
d	Provide the required text to be inserted in this permit:		
2	Is air quality dispersion modeling or modeling waiver being submitted with this application? ☐ Yes ☒ No		
3	Does this facility require an "Air Toxics" permit under 20.2.72.400 NMAC & 20.2.72.502, Tables A and/or B? ☐ Yes ☒ No		
4	Will this facility be a source of federal Hazardous Air Pollutants (HAP)? ☒ Yes ☐ No		
a	If Yes, what type of source? ☐ Major (≥ 10 tpy of any single HAP OR ≥ 25 tpy of any combination of HAPS) OR ☒ Minor (< 10 tpy of any single HAP AND < 25 tpy of any combination of HAPS)		
5	Is any unit exempt under 20.2.72.202.B.3 NMAC? ☐ Yes ☒ No		
a	If yes, include the name of company providing commercial electric power to the facility: _____ Commercial power is purchased from a commercial utility company, which specifically does not include power generated on site for the sole purpose of the user.		

Section 1-G: Streamline Application

(This section applies to 20.2.72.300 NMAC Streamline applications only)

1	☐ I have filled out Section 18, "Addendum for Streamline Applications." ☒ N/A (This is not a Streamline application.)
---	--

Section 1-H: Current Title V Information - Required for all applications from TV Sources

(Title V-source required information for all applications submitted pursuant to 20.2.72 NMAC (Minor Construction Permits), or 20.2.74/20.2.79 NMAC (Major PSD/NNSR applications), and/or 20.2.70 NMAC (Title V))

1	Responsible Official (R.O.) (20.2.70.300.D.2 NMAC):		Phone:
a	R.O. Title:	R.O. e-mail:

2	Alternate Responsible Official (20.2.70.300.D.2 NMAC):		Phone:
a	A. R.O. Title:	A. R.O. e-mail:	
b	A. R. O. Address:		
3	Company's Corporate or Partnership Relationship to any other Air Quality Permittee (List the names of any companies that have operating (20.2.70 NMAC) permits and with whom the applicant for this permit has a corporate or partnership relationship):		
4	Name of Parent Company ("Parent Company" means the primary name of the organization that owns the company to be permitted wholly or in part.):		
a	Address of Parent Company:		
5	Names of Subsidiary Companies ("Subsidiary Companies" means organizations, branches, divisions or subsidiaries, which are owned, wholly or in part, by the company to be permitted.):		
6	Telephone numbers & names of the owners' agents and site contacts familiar with plant operations:		
7	Affected Programs to include Other States, local air pollution control programs (i.e. Bernalillo) and Indian tribes: Will the property on which the facility is proposed to be constructed or operated be closer than 80 km (50 miles) from other states, local pollution control programs, and Indian tribes and pueblos (20.2.70.402.A.2 and 20.2.70.7.B)? If yes, state which ones and provide the distances in kilometers:		

Section 1-I – Submittal Requirements

Each 20.2.73 NMAC (NOI), a 20.2.70 NMAC (Title V), a 20.2.72 NMAC (NSR minor source), or 20.2.74 NMAC (PSD) application package shall consist of the following:

Hard Copy Submittal Requirements:

- 1) One hard copy **original signed and notarized application package printed double sided ‘head-to-toe’ 2-hole punched** as we bind the document on top, not on the side; except Section 2 (landscape tables), which should be **head-to-head**. Please use **numbered tab separators** in the hard copy submittal(s) as this facilitates the review process. For NOI submittals only, hard copies of UA1, Tables 2A, 2D & 2F, Section 3 and the signed Certification Page are required. **Please include a copy of the check on a separate page.**
- 2) If the application is for a minor NSR, PSD, NNSR, or Title V application, include one working hard **copy** for Department use. This **copy** should be printed in book form, 3-hole punched, and **must be double sided**. Note that this is in addition to the head-to-toe 2-hole punched copy required in 1) above. Minor NSR Technical Permit revisions (20.2.72.219.B NMAC) only need to fill out Sections 1-A, 1-B, 3, and should fill out those portions of other Section(s) relevant to the technical permit revision. TV Minor Modifications need only fill out Sections 1-A, 1-B, 1-H, 3, and those portions of other Section(s) relevant to the minor modification. NMED may require additional portions of the application to be submitted, as needed.
- 3) The entire NOI or Permit application package, including the full modeling study, should be submitted electronically. Electronic files for applications for NOIs, any type of General Construction Permit (GCP), or technical revisions to NSRs must be submitted with compact disk (CD) or digital versatile disc (DVD). For these permit application submittals, **two CD** copies are required (in sleeves, not crystal cases, please), with additional CD copies as specified below. NOI applications require only a **single CD** submittal. Electronic files for other New Source Review (construction) permits/permit modifications or Title V permits/permit modifications can be submitted on CD/DVD or sent through AQB’s secure file transfer service.

Electronic files sent by (check one):

☐ CD/DVD attached to paper application

☐ secure electronic transfer. Air Permit Contact Name _____

Email _____

Phone number _____

a. If the file transfer service is chosen by the applicant, after receipt of the application, the Bureau will email the applicant with instructions for submitting the electronic files through a secure file transfer service. Submission of the electronic files through the file transfer service needs to be completed within 3 business days after the invitation is received, so the applicant should ensure that the files are ready when sending the hard copy of the application. The applicant will not need a password to complete the transfer. **Do not use the file transfer service for NOIs, any type of GCP, or technical revisions to NSR permits.**

- 4) Optionally, the applicant may submit the files with the application on compact disk (CD) or digital versatile disc (DVD) following the instructions above and the instructions in 5 for applications subject to PSD review.
- 5) If **air dispersion modeling** is required by the application type, include the **NMED Modeling Waiver** and/or electronic air dispersion modeling report, input, and output files. The dispersion modeling **summary report only** should be submitted as hard copy(ies) unless otherwise indicated by the Bureau.
- 6) If the applicant submits the electronic files on CD and the application is subject to PSD review under 20.2.74 NMAC (PSD) or NNSR under 20.2.79 NMC include,
 - a. one additional CD copy for US EPA,
 - b. one additional CD copy for each federal land manager affected (NPS, USFS, FWS, USDI) and,
 - c. one additional CD copy for each affected regulatory agency other than the Air Quality Bureau.

If the application is submitted electronically through the secure file transfer service, these extra CDs do not need to be submitted.

Electronic Submittal Requirements [in addition to the required hard copy(ies)]:

- 1) All required electronic documents shall be submitted as 2 separate CDs or submitted through the AQB secure file transfer service. Submit a single PDF document of the entire application as submitted and the individual documents comprising the application.
- 2) The documents should also be submitted in Microsoft Office compatible file format (Word, Excel, etc.) allowing us to access the text and formulas in the documents (copy & paste). Any documents that cannot be submitted in a Microsoft Office compatible

format shall be saved as a PDF file from within the electronic document that created the file. If you are unable to provide Microsoft office compatible electronic files or internally generated PDF files of files (items that were not created electronically: i.e. brochures, maps, graphics, etc.), submit these items in hard copy format. We must be able to review the formulas and inputs that calculated the emissions.

- 3) It is preferred that this application form be submitted as 4 electronic files (**3 MSWord docs**: Universal Application section 1 [UA1], Universal Application section 3-19 [UA3], and Universal Application 4, the modeling report [UA4]) and **1 Excel file** of the tables (Universal Application section 2 [UA2]). Please include as many of the 3-19 Sections as practical in a single MS Word electronic document. Create separate electronic file(s) if a single file becomes too large or if portions must be saved in a file format other than MS Word.
- 4) The **electronic file names** shall be a maximum of 25 characters long (including spaces, if any). The format of the electronic Universal Application shall be in the format: "A-3423-FacilityName". The "A" distinguishes the file as an application submittal, as opposed to other documents the Department itself puts into the database. Thus, all electronic application submittals should begin with "A-". Modifications to existing facilities should use the **core permit number** (i.e. '3423') the Department assigned to the facility as the next 4 digits. Use 'XXXX' for new facility applications. The format of any separate electronic submittals (additional submittals such as non-Word attachments, re-submittals, application updates) and Section document shall be in the format: "A-3423-9-description", where "9" stands for the **section #** (in this case Section 9-Public Notice). Please refrain, as much as possible, from submitting any scanned documents as this file format is extremely large, which uses up too much storage capacity in our database. Please take the time to fill out the **header information** throughout all submittals as this will identify any loose pages, including the Application Date (date submitted) & Revision number (0 for original, 1, 2, etc.; which will help keep track of subsequent partial update(s) to the original submittal. Do not use special symbols (#, @, etc.) in file names. The footer information should not be modified by the applicant.

¹ Unit numbers must correspond to unit numbers in the previous permit unless a complete cross reference table of all units in both permits is provided.² Specify dates required to determine regulatory applicability.³ To properly account for power conversion efficiencies, generator set rated capacity shall be reported as the rated capacity of the engine in horsepower, not the kilowatt capacity of the generator set.⁴ "4SLB" means four stroke lean burn engine, "4SRB" means four stroke rich burn engine, "2SLB" means two stroke lean burn engine, "CI" means compression ignition, and "SI" means spark ignition

Table 2-B: Insignificant Activities¹ (20.2.70 NMAC) OR Exempted Equipment (20.2.72 NMAC)

All 20.2.70 NMAC (Title V) applications must list all Insignificant Activities in this table. All 20.2.72 NMAC applications must list Exempted Equipment in this table. If equipment listed on this table is exempt under 20.2.72.202.B.5, include emissions calculations and emissions totals for 202.B.5 "similar functions" units, operations, and activities in Section 6, Calculations. Equipment and activities exempted under 20.2.72.202 NMAC may not necessarily be Insignificant under 20.2.70 NMAC (and vice versa). Unit & stack numbering must be consistent throughout the application package. Per Exemptions Policy 02-012.00 (see http://www.env.nm.gov/aqb/permit/aqb_pol.html), 20.2.72.202.B NMAC Exemptions do not apply, but 20.2.72.202.A NMAC exemptions do apply to NOI facilities under 20.2.73 NMAC. List 20.2.72.301.D.4 NMAC Auxiliary Equipment for Streamline applications in Table 2-A. The List of Insignificant Activities (for TV) can be found online at <http://www.env.nm.gov/aqb/forms/InsignificantListTitleV.pdf>. TV sources may elect to enter both TV Insignificant Activities and Part 72 Exemptions on this form.

Unit Number	Source Description	Manufacturer	Model No.	Max Capacity	List Specific 20.2.72.202 NMAC Exemption (e.g. 20.2.72.202.B.5)	Date of Manufacture /Reconstruction ²	For Each Piece of Equipment, Check One
			Serial No.	Capacity Units	Insignificant Activity citation (e.g. IA List Item #1.a)	Date of Installation /Construction ²	
Does not apply.	Does not apply						☐ Existing (unchanged) ☐ To be Removed ☐ New/Additional ☐ Replacement Unit ☐ To Be Modified ☐ To be Replaced

¹ Insignificant activities exempted due to size or production rate are defined in 20.2.70.300.D.6, 20.2.70.7.Q NMAC, and the NMED/AQB List of Insignificant Activities, dated September 15, 2008. Emissions from these insignificant activities do not need to be reported, unless specifically requested.

² Specify date(s) required to determine regulatory applicability.

Table 2-C: Emissions Control Equipment

Unit and stack numbering must correspond throughout the application package. Only list control equipment for TAPs if the TAP's maximum uncontrolled emissions rate is over its respective threshold as listed in 20.2.72 NMAC, Subpart V, Tables A and B. In accordance with 20.2.72.203.A(3) and (8) NMAC, 20.2.70.300.D(5)(b) and (e) NMAC, and 20.2.73.200.B(7) NMAC, the permittee shall report all control devices and list each pollutant controlled by the control device regardless if the applicant takes credit for the reduction in emissions.

Control Equipment Unit No.	Control Equipment Description	Date Installed	Controlled Pollutant(s)	Controlling Emissions for Unit Number(s) ¹	Efficiency (% Control by Weight)	Method used to Estimate Efficiency
CAT-1	Oxidative Catalyst	Jul-19	CO, VOC, HCHO	ENG-1	94% CO, 42% VOC, 80% CHO	Vendor Specifications
CAT-2	Oxidative Catalyst	Jul-19	CO, VOC, HCHO	ENG-2	94% CO, 42% VOC, 80% CHO	Vendor Specifications
CAT-3	Oxidative Catalyst	Jul-19	CO, VOC, HCHO	ENG-3	94% CO, 42% VOC, 80% CHO	Vendor Specifications
CAT-4	Oxidative Catalyst	Jul-19	CO, VOC, HCHO	ENG-4	94% CO, 42% VOC, 80% CHO	Vendor Specifications
FLARE	Flare	Apr-16	VOC, H ₂ S	Various (MSS)	98%	Engineering Estimate
VRU-1	Primary and Redundant Vapor Recovery Units	Apr-16	VOC, H ₂ S	TK-1, TK-2, TK-3 PW-1, PW-2, PW-3, PW-4	100%	Engineering Estimate
VRU-2	Primary and Redundant Vapor Recovery Units	Apr-16	VOC, H ₂ S	TK-1, TK-2, TK-3 PW-1, PW-2, PW-3, PW-4	100%	Engineering Estimate
VRU-3	Single Vapor Recovery Unit	Apr-16	VOC, H ₂ S	TK-S2	95%	Engineering Estimate
VRU-4	Primary and Redundant Vapor Recovery Units	Jan-20	VOC, H ₂ S	TK-1, TK-2, TK-3 PW-1, PW-2, PW-3, PW-4	100%	Engineering Estimate
REB-1/DHY-1	Condenser, Re-boiler, Glowplug	Apr-16	VOC, H ₂ S	DHY-1	99.6% for still vent emissions 98% for flash vent emissions	Engineering Estimate

¹ List each control device on a separate line. For each control device, list all emission units controlled by the control device.

Table 2-D: Maximum Emissions (under normal operating conditions)

☐ This Table was intentionally left blank because it would be identical to Table 2-E.

Maximum Emissions are the emissions at maximum capacity and prior to (in the absence of) pollution control, emission-reducing process equipment, or any other emission reduction. Calculate the hourly emissions using the worst case hourly emissions for each pollutant. For each pollutant, calculate the annual emissions as if the facility were operating at maximum plant capacity without pollution controls for 8760 hours per year, unless otherwise approved by the Department. List Hazardous Air Pollutants (HAP) & Toxic Air Pollutants (TAPs) in Table 2-I. Unit & stack numbering must be consistent throughout the application package. Fill all cells in this table with the emission numbers or a "-" symbol. A "-" symbol indicates that emissions of this pollutant are not expected. Numbers shall be expressed to at least 2 decimal points (e.g. 0.41, 1.41, or 1.41E-4).

¹ **Condensable Particulate Matter:** Include condensable particulate matter emissions for PM10 and PM2.5 if the source is a combustion source. Do not include condensable particulate matter for TSP unless TSP is set equal to PM10 and PM2.5.

** Totals represent the hourly and annual maximum total PTEs for the various scenarios represented in Section 15.

Table 2-F: Additional Emissions during Startup, Shutdown, and Routine Maintenance (SSM)

□ This table is intentionally left blank since all emissions at this facility due to routine or predictable startup, shutdown, or scheduled maintenance are no higher than those listed in Table 2-E and a malfunction emission limit is not already permitted or requested. If you are required to report GHG emissions as described in Section 6a, include any GHG emissions during Startup, Shutdown, and/or Scheduled Maintenance (SSM) in Table 2-P. Provide an explanations of SSM emissions in Section 6 and 6a.

All applications for facilities that have emissions during routine or predictable startup, shutdown or scheduled maintenance (SSM)¹, including NOI applications, must include in this table the Maximum Emissions during routine or predictable startup, shutdown and scheduled maintenance (20.2.7 NMAC, 20.2.72.203.A.3 NMAC, 20.2.73.200.D.2 NMAC). In Section 6 and 6a, provide emissions calculations for all SSM emissions reported in this table. Refer to "Guidance for Submittal of Startup, Shutdown, Maintenance Emissions in Permit Applications (https://www.env.nm.gov/aqb/permit/aqb_pol.html) for more detailed instructions. Numbers shall be expressed to at least 2 decimal points (e.g. 0.41, 1.41, or 1.41E-4).

Unit No.	NOx		CO		VOC		SOx		TSP ²		PM10 ²		PM2.5 ²		H ₂ S		Lead	
	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr
SSM	-	-	-	-	-	10.00	-	-	-	-	-	-	-	-	-	-	-	-
Totals	0	0	0	0	0	10.00	0	0	0	0	0	0	0	0	0	0	0	0

¹ For instance, if the short term steady-state Table 2-E emissions are 5 lb/hr and the SSM rate is 12 lb/hr, enter 7 lb/hr in this table. If the annual steady-state Table 2-E emissions are 21.9 TPY, and the number of scheduled SSM events result in annual emissions of 31.9 TPY, enter 10.0 TPY in the table below.

¹ **Condensable Particulate Matter:** Include condensable particulate matter emissions for PM10 and PM2.5 if the source is a combustion source. Do not include condensable particulate matter for TSP unless TSP is set equal to PM10 and PM2.5.

Table 2-G: Stack Exit and Fugitive Emission Rates for Special Stacks

■ I have elected to leave this table blank because this facility does not have any stacks/vents that split emissions from a single source or combine emissions from more than one source listed in table 2-A. Additionally, the emission rates of all stacks match the Requested allowable emission rates stated in Table 2-E.

Use this table to list stack emissions (requested allowable) from split and combined stacks. List Toxic Air Pollutants (TAPs) and Hazardous Air Pollutants (HAPs) in Table 2-I. List all fugitives that are associated with the normal, routine, and non-emergency operation of the facility. Unit and stack numbering must correspond throughout the application package. Refer to Table 2-E for instructions on use of the “ symbol and on significant figures.

Stack No.	Serving Unit Number(s) from Table 2-A	NOx		CO		VOC		SOx		TSP		PM10		PM2.5		■ H ₂ S or □ Lead	
		lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr
Totals:																	

Table 2-H: Stack Exit Conditions

Unit and stack numbering must correspond throughout the application package. Include the stack exit conditions for each unit that emits from a stack, including blowdown venting parameters and tank emissions. If the facility has multiple operating scenarios, complete a separate Table 2-H for each scenario and, for each, type scenario name here:

Stack Number	Serving Unit Number(s) from Table 2-A	Orientation (H=Horizontal V=Vertical)	Rain Caps (Yes or No)	Height Above Ground (ft)	Temp. (F)	Flow Rate		Moisture by Volume (%)	Velocity (ft/sec)	Inside Diameter (ft)

Table 2-I: Stack Exit and Fugitive Emission Rates for HAPs and TAPs

In the table below, report the Potential to Emit for each HAP from each regulated emission unit listed in Table 2-A, only if the entire facility emits the HAP at a rate greater than or equal to one (1) ton per year. For each such emission unit, HAPs shall be reported to the nearest 0.1 tpy. Each facility-wide Individual HAP total and the facility-wide Total HAPs shall be the sum of all HAP sources calculated to the nearest 0.1 ton per year. Per 20.2.72.403.A.1 NMAC, facilities not exempt [see 20.2.72.402.C NMAC] from TAP permitting shall report each TAP that has an uncontrolled emission rate in excess of its pounds per hour screening level specified in 20.2.72.502 NMAC. TAPs shall be reported using one more significant figure than the number of significant figures shown in the pound per hour threshold corresponding to the substance. Use the HAP nomenclature as it appears in Section 112 (b) of the 1990 CAAA and the TAP nomenclature as it listed in 20.2.72.502 NMAC. Include tank-flashing emissions estimates of HAPs in this table. For each HAP or TAP listed, fill all cells in this table with the emission numbers or a "-" symbol. A "-" symbol indicates that emissions of this pollutant are not expected or the pollutant is emitted in a quantity less than the threshold amounts described above.

Stack No.	Unit No.(s)	Total HAPs		Benzene ■ HAP or □ TAP		Toluene ■ HAP or □ TAP		Ethylbenzene ■ HAP or □ TAP		Xylene ■ HAP or □ TAP		n-Hexane ■ HAP or □ TAP		Formaldehyde ■ HAP or □ TAP		Provide Pollutant Name Here □ HAP or □ TAP		Provide Pollutant Name Here □ HAP or □ TAP

Table 2-K: Liquid Data for Tanks Listed in Table 2-L

For each tank, list the liquid(s) to be stored in each tank. If it is expected that a tank may store a variety of hydrocarbon liquids, enter "mixed hydrocarbons" in the Composition column for that tank and enter the corresponding data of the most volatile liquid to be stored in the tank. If tank is to be used for storage of different materials, list all the materials in the "All Calculations" attachment, run the newest version of TANKS on each, and use the material with the highest emission rate to determine maximum uncontrolled and requested allowable emissions rate. The permit will specify the most volatile category of liquids that may be stored in each tank. Include appropriate tank-flashing modeling input data. Use additional sheets if necessary. Unit and stack numbering must correspond throughout the application package.

Tank No.	SCC Code	Material Name	Composition	Liquid Density (lb/gal)	Vapor Molecular Weight (lb/lb*mol)	Average Storage Conditions		Max Storage Conditions	
						Temperature (°F)	True Vapor Pressure (psia)	Temperature (°F)	True Vapor Pressure (psia)
TK-1	40400312	Condensate	Mixed Hydrocarbons	7.1	50	66.05	3.80	95	6.34

Table 2-P: Greenhouse Gas Emissions

Applications submitted under 20.2.70, 20.2.72, & 20.2.74 NMAC are required to complete this Table. Power plants, Title V major sources, and PSD major sources must report and calculate all GHG emissions for each unit. Applicants must report potential emission rates in short tons per year (see Section 6.a for assistance). Include GHG emissions during Startup, Shutdown, and Scheduled Maintenance in this table. For minor source facilities that are not power plants, are not Title V, or are not PSD, there are three options for reporting GHGs 1) report GHGs for each individual piece of equipment; 2) report all GHGs from a group of unit types, for example report all combustion source GHGs as a single unit and all venting GHG as a second separate unit; OR 3) check the following box ☐ By checking this box, the applicant acknowledges the total CO₂e emissions are less than 75,000 tons per year.

		CO ₂ ton/yr	N ₂ O ton/yr	CH ₄ ton/yr	SF ₆ ton/yr	PFC/HFC ton/yr ²									Total GHG Mass Basis ton/yr ⁴	Total CO ₂ e ton/yr ⁵
Unit No.	GWPs ¹	1	298	25	22,800	footnote 3										
Total	mass GHG															
	CO ₂ e															

¹ GWP (Global Warming Potential): Applicants must use the most current GWPs codified in Table A-1 of 40 CFR part 98. GWPs are subject to change, therefore, applicants need to check 40 CFR 98 to confirm GWP values.

² For HFCs or PFCs describe the specific HFC or PFC compound and use a separate column for each individual compound.

³ For each new compound, enter the appropriate GWP for each HFC or PFC compound from Table A-1 in 40 CFR 98.

⁴ Green house gas emissions on a mass basis is the ton per year green house gas emission before adjustment with its GWP.

⁵ CO₂e means Carbon Dioxide Equivalent and is calculated by multiplying the TPY mass emissions of the green house gas by its GWP.

Section 3

Application Summary

The **Application Summary** shall include a brief description of the facility and its process, the type of permit application, the applicable regulation (i.e. 20.2.72.200.A.X, or 20.2.73 NMAC) under which the application is being submitted, and any air quality permit numbers associated with this site. If this facility is to be collocated with another facility, provide details of the other facility including permit number(s). In case of a revision or modification to a facility, provide the lowest level regulatory citation (i.e. 20.2.72.219.B.1.d NMAC) under which the revision or modification is being requested. Also describe the proposed changes from the original permit, how the proposed modification will affect the facility's operations and emissions, de-bottlenecking impacts, and changes to the facility's major/minor status (both PSD & Title V).

The **Process Summary** shall include a brief description of the facility and its processes.

Startup, Shutdown, and Maintenance (SSM) routine or predictable emissions: Provide an overview of how SSM emissions are accounted for in this application. Refer to "Guidance for Submittal of Startup, Shutdown, Maintenance Emissions in Permit Applications (http://www.env.nm.gov/aqb/permit/app_form.html) for more detailed instructions on SSM emissions.

The Salado Draw 23 Compressor Station and Tank Battery is currently authorized under NSR Permit No. 6832-M7. In this revision application, gas analyses were updated, tank working and standing emissions calculations were updated and due to the updated gas analyses, the glycol dehydrator emissions estimation and the ProMax simulation were rerun with the updated values.

The Salado Draw 23 Compressor Station and Tank Battery is designed to remove water and hydrocarbon liquids from natural gas produced in the surrounding area, and to compress the gas into a pipeline for delivery to a processing plant. The site will include 4 compressor engines, 6 heaters, 1 dehydration unit and associated condenser, reboiler, and glowplug, flare, 3 condensate tanks, 4 water tanks, 2 slop tanks, 1 flash gas compressor, water truck loading, a flare and VRU system with redundant capacity.

Section 4

Process Flow Sheet

A **process flow sheet** and/or block diagram indicating the individual equipment, all emission points and types of control applied to those points. The unit numbering system should be consistent throughout this application.

**SALADO DRAW 23 COMPRESSOR STATION AND TANK BATTERY
PROCESS FLOW DIAGRAM**

Process Flow Description:

- Inputs:** OIL, WATER FROM THE FIELD; WATER TANKS PW-1, PW-2, PW-3, PW-4; CONDENSATE TANKS TK-1, TK-2, TK-3; WATER SLOP TANK TK-S1; SSM ACTIVITIES.
- Process Units:** SEPARATORS, HEATER TREATERS, FLASH GAS COMPRESSOR, PRIMARY AND REDUNDANT VAPOR RECOVERY UNITS, SCRUBBER, COMPRESSORS, GLYCOL DEHY-1, REBOILER, VRU, FLARE.
- Outputs:** GAS TO SALES; PIPED OFF SITE; PIPED TO BATTERY; WATER TRUCK LOADING; FLARE.
- Energy/Process Numbers (EPNs):** ENG-1, ENG-2, ENG-3, ENG-4; DHY-1; REB-1; TK-FUG1; TK-FUG2; TK-S1; TK-S2; FUG; SITE-SSM.

Section 6

All Calculations

Show all calculations used to determine both the hourly and annual controlled and uncontrolled emission rates. All calculations shall be performed keeping a minimum of three significant figures. Document the source of each emission factor used (if an emission rate is carried forward and not revised, then a statement to that effect is required). If identical units are being permitted and will be subject to the same operating conditions, submit calculations for only one unit and a note specifying what other units to which the calculations apply. All formulas and calculations used to calculate emissions must be submitted. The "Calculations" tab in the UA2 has been provided to allow calculations to be linked to the emissions tables. Add additional "Calc" tabs as needed. If the UA2 or other spread sheets are used, all calculation spread sheet(s) shall be submitted electronically in Microsoft Excel compatible format so that formulas and input values can be checked. Format all spread sheets and calculations such that the reviewer can follow the logic and verify the input values. Define all variables. If calculation spreadsheets are not used, provide the original formulas with defined variables. Additionally, provide subsequent formulas showing the input values for each variable in the formula. All calculations, including those calculations are imbedded in the Calc tab of the UA2 portion of the application, the printed Calc tab(s), should be submitted under this section.

Tank Flashing Calculations: The information provided to the AQB shall include a discussion of the method used to estimate tank-flashing emissions, relative thresholds (i.e., NOI, permit, or major source (NSPS, PSD or Title V)), accuracy of the model, the input and output from simulation models and software, all calculations, documentation of any assumptions used, descriptions of sampling methods and conditions, copies of any lab sample analysis. If Hysis is used, all relevant input parameters shall be reported, including separator pressure, gas throughput, and all other relevant parameters necessary for flashing calculation.

SSM Calculations: It is the applicant's responsibility to provide an estimate of SSM emissions or to provide justification for not doing so. In this Section, provide emissions calculations for Startup, Shutdown, and Routine Maintenance (SSM) emissions listed in the Section 2 SSM and/or Section 22 GHG Tables and the rational for why the others are reported as zero (or left blank in the SSM/GHG Tables). Refer to "Guidance for Submittal of Startup, Shutdown, Maintenance Emissions in Permit Applications (http://www.env.nm.gov/aqb/permit/app_form.html) for more detailed instructions on calculating SSM emissions. If SSM emissions are greater than those reported in the Section 2, Requested Allowables Table, modeling may be required to ensure compliance with the standards whether the application is NSR or Title V. Refer to the Modeling Section of this application for more guidance on modeling requirements.

Glycol Dehydrator Calculations: The information provided to the AQB shall include the manufacturer's maximum design recirculation rate for the glycol pump. If GRI-Glycalc is used, the full input summary report shall be included as well as a copy of the gas analysis that was used.

Road Calculations: Calculate fugitive particulate emissions and enter haul road fugitives in Tables 2-A, 2-D and 2-E for:

1. If you transport raw material, process material and/or product into or out of or within the facility and have PER emissions greater than 0.5 tpy.
2. If you transport raw material, process material and/or product into or out of the facility more frequently than one round trip per day.

Significant Figures:

A. All emissions standards are deemed to have at least two significant figures, but not more than three significant figures.

B. At least 5 significant figures shall be retained in all intermediate calculations.

C. In calculating emissions to determine compliance with an emission standard, the following rounding off procedures shall be used:

- (1) If the first digit to be discarded is less than the number 5, the last digit retained shall not be changed;
- (2) If the first digit discarded is greater than the number 5, or if it is the number 5 followed by at least one digit other than the number zero, the last figure retained shall be increased by one unit; **and**
- (3) If the first digit discarded is exactly the number 5, followed only by zeros, the last digit retained shall be rounded upward if it is an odd number, but no adjustment shall be made if it is an even number.
- (4) The final result of the calculation shall be expressed in the units of the standard.

Control Devices: In accordance with 20.2.72.203.A(3) and (8) NMAC, 20.2.70.300.D(5)(b) and (e) NMAC, and 20.2.73.200.B(7) NMAC, the permittee shall report all control devices and list each pollutant controlled by the control device regardless if the applicant takes credit for the reduction in emissions. The applicant can indicate in this section of the application if they chose to not take credit for the reduction in emission rates. For notices of intent submitted under 20.2.73 NMAC, only uncontrolled emission rates can be considered to determine applicability unless the state or federal Acts require the control. This information is necessary to determine if federally enforceable conditions are necessary for the control device, and/or if the control device produces its own regulated pollutants or increases emission rates of other pollutants.

Compressor Engines (EPNs: ENG-1, -2, -3, -4)

The Caterpillar G3606 engines are rated at 1875 hp and are equipped with oxidative catalysts with three elements. Emissions factors for CO, VOC, and formaldehyde are based on expected post-catalyst emission performance with appropriate safety factors. The NO_x emission factor is from the engine manufacturer specifications. The PM, benzene, toluene, ethylbenzene, and xylene emission factors are from AP-42, Table 3.2-2 (July 2000). Field gas is used for fuel.

Heaters/Reboiler (EPNs: HTR-1, -2, -3, -4, -5, -6, REB-1)

Emissions from the heaters/reboiler are estimated using factors from AP-42, Chapter 1.4 for natural gas combustion. Field gas is used for fuel.

Dehydration Unit (EPN: DHY-1)

The glycol dehydration unit vent emissions are calculated using the GRI-GLYCalc™ program, with a 99.6% control credit applied for the regenerator emissions routed to the condenser and reboiler and a 98% control credit applied to the flash vent emissions. The dehydration unit is equipped with a glowplug if the reboiler cycles off. The dehydration unit has a throughput of 45 MMscf/day.

Fugitives (EPN: FUG)

Fugitive emissions were estimated based on the TCEQ technical guidance document for "Equipment Fugitive Leaks" dated October 2000. The Oil and Gas Production Operations equipment leak emission factors approved by the TCEQ were used in the emissions estimations. The calculations consider each type of service and the corresponding projected source count. The emissions speciations were determined from site-specific gas analyses and ProMax backblend analyses.

Flare (EPN: FLARE)

The emission rates from the flare are based on the emission factors from the TCEQ Technical Guidance Package for Flares and Vapor Oxidizers dated October 2000. 98% destruction efficiency is assumed for the VOC and H₂S emissions. The SO₂ emissions are based on a material balance. The flare is smokeless, so no PM emissions are expected. Flows to the flare include pilot/purge gas, predictable startup and shutdown emissions resulting from power outages, operations at associated facilities that affect operations at the facility, or compressor shutdowns associated with the operations or maintenance conditions.

Truck Loading (EPN: LOAD)

Water is loaded into trucks using submerged fill. Maximum hourly emission rates are based on filling one truck (200-bbl each) in one hour. Annual emission rates are based on the annual water slop tank throughput. Emission rates are calculated according to the AP-42, Section 5.2 (dated June 2008) methodology.

Storage Vessels (EPNs: TK-FUG1, TK-FUG2, TK-S1)

Annual working and standing emission rates from the condensate, water, and slop tanks are based on the EPA's AP-42, Section 7.1. Flash emissions are calculated using the gas oil ratio (GOR) calculated from a ProMax simulation and taken from a flash gas analysis for the condensate slop tank (FIN: TK-S2, EPN: TK-FUG2). The color of the tanks are dark green, therefore a solar absorptance of 0.90 was used. Hourly condensate tank filling emissions are calculated using equations from AP-42, Section 7.1. Emissions from the condensate and water tanks (FIN: TK- 1, TK-2, TK-3, PW-1, PW-2, PW-3, PW-4) will be routed through a common vent line to a VRU system with redundant capacity (EPN: TK-FUG1). The 750-bbl condensate slop tank (FIN: TK-S2) will be routed through a common vent line to a VRU system (EPN: TK-FUG2). Emissions from the 100-bbl slop water tank (EPN: TK-S1) will vent to atmosphere. Emissions from all tanks are speciated using ProMax simulation results and the flash emissions from the condensate slop tank are speciated using the flash gas analysis.

Startup, Shutdown, and Maintenance (SSM) (EPNs: SITE-SSM, SSM)

Startup, Shutdown, and Maintenance (SSM) emissions are accounted for via individual calculations for SSM flaring, dehydrator blowdowns, VRU blowdowns, and compressor blowdowns (EPN SITE-SSM). An additional 10.0 tpy VOC buffer is included as allowed by the NMED SSM Guidance (EPN: SSM).

Section 6.a

Green House Gas Emissions

(Submitting under 20.2.70, 20.2.72 20.2.74 NMAC)

Title V (20.2.70 NMAC), Minor NSR (20.2.72 NMAC), and PSD (20.2.74 NMAC) applicants must estimate and report greenhouse gas (GHG) emissions to verify the emission rates reported in the public notice, determine applicability to 40 CFR 60 Subparts, and to evaluate Prevention of Significant Deterioration (PSD) applicability. GHG emissions that are subject to air permit regulations consist of the sum of an aggregate group of these six greenhouse gases: carbon dioxide (CO₂), nitrous oxide (N₂O), methane (CH₄), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF₆).

Calculating GHG Emissions:

1. Calculate the ton per year (tpy) GHG mass emissions and GHG CO₂e emissions from your facility.
2. GHG mass emissions are the sum of the total annual tons of greenhouse gases without adjusting with the global warming potentials (GWPs). GHG CO₂e emissions are the sum of the mass emissions of each individual GHG multiplied by its GWP found in Table A-1 in 40 CFR 98 Mandatory Greenhouse Gas Reporting.
3. Emissions from routine or predictable start up, shut down, and maintenance must be included.
4. Report GHG mass and GHG CO₂e emissions in Table 2-P of this application. Emissions are reported in **short** tons per year and represent each emission unit's Potential to Emit (PTE).
5. All Title V major sources, PSD major sources, and all power plants, whether major or not, must calculate and report GHG mass and CO₂e emissions for each unit in Table 2-P.
6. For minor source facilities that are not power plants, are not Title V, and are not PSD there are three options for reporting GHGs in Table 2-P: 1) report GHGs for each individual piece of equipment; 2) report all GHGs from a group of unit types, for example report all combustion source GHGs as a single unit and all venting GHGs as a second separate unit; 3) or check the following ☐ By checking this box, the applicant acknowledges the total CO₂e emissions are less than 75,000 tons per year.

Sources for Calculating GHG Emissions:

- Manufacturer's Data
- AP-42 Compilation of Air Pollutant Emission Factors at <http://www.epa.gov/ttn/chief/ap42/index.html>
- EPA's Internet emission factor database WebFIRE at <http://cfpub.epa.gov/webfire/>
- 40 CFR 98 Mandatory Green House Gas Reporting except that tons should be reported in short tons rather than in metric tons for the purpose of PSD applicability.
- API Compendium of Greenhouse Gas Emissions Methodologies for the Oil and Natural Gas Industry. August 2009 or most recent version.
- Sources listed on EPA's NSR Resources for Estimating GHG Emissions at <http://www.epa.gov/nsr/clean-air-act-permitting-greenhouse-gases>:

Global Warming Potentials (GWP):

Applicants must use the Global Warming Potentials codified in Table A-1 of the most recent version of 40 CFR 98 Mandatory Greenhouse Gas Reporting. The GWP for a particular GHG is the ratio of heat trapped by one unit mass of the GHG to that of one unit mass of CO₂ over a specified time period.

"Greenhouse gas" for the purpose of air permit regulations is defined as the aggregate group of the following six gases: carbon dioxide, nitrous oxide, methane, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride. **(20.2.70.7 NMAC, 20.2.74.7 NMAC)**. You may also find GHGs defined in 40 CFR 86.1818-12(a).

Metric to Short Ton Conversion:

Short tons for GHGs and other regulated pollutants are the standard unit of measure for PSD and title V permitting programs. 40 CFR 98 Mandatory Greenhouse Reporting requires metric tons.

1 metric ton = 1.10231 short tons (per Table A-2 to Subpart A of Part 98 – Units of Measure Conversions)

EMISSION ESTIMATE FOR GLYCOL SYSTEMS

The glycol still vent is routed through the condenser, reboiler, and glow plug for a total control efficiency of 99.6%. A control credit of 98% is applied to the flash tank vent emissions routed to the firebox of the reboiler equipped with a glowplug.

TEG Still Vent

Processing capacity: 45 MMSCFD

Total Control efficiency: 99.6%

Number of dehyds: 1

PROCESS AIR DATA

Air-to-Fuel Ratio (lb/lb)

21.5

If no air-to-fuel ratio is entered, the calculated stoichiometric air-to-fuel ratio will be used in the calculations.

FUEL GAS BASIS

Basis of Heating Value Specified for Firing Capacity (LHV/HHV):
 (LHV - Lower Heating Value, HHV - Higher Heating Value)

LHV

MISCELLANEOUS BASIS

Horsepower (hp) is the same as brake horsepower (bhp).
 All calculations are based on the standard conditions of 60°F and 1 atm.

NOTES

NO_x, CO, VOC, and Formaldehyde emission factors are from the Gas Engine Rating Pro engine spec sheet.

VOC emission factor does not include Formaldehyde.

The PM, n-Hexane, Benzene, Toluene, Ethylbenzene, and Xylene emission factors are from AP-42, Table 3.2-2, July 2000.

Example calculation:

PM factor from AP-42, Table 3.2-2 for filterable and cond. condition $[(0.000771 + 0.00991 \text{ lb/MMBtu}) * (6875 \text{ Btu/hp-hr}) * (454 \text{ g/lb}) / (10^6)] = 0.031 \text{ g/hp-hr}$

SO₂ emission factor conservatively estimated as 10 gr/100 dscf.

Fuel Gas From Salado Draw 23 Compressor Station, Inlet

* HHV/LHV data are from *Steam, Its Generation and Use* (Babcock & Wilcox, 1972); HHV/LHV data for C7H16 are from *Engineering Data Book* (Gas Processors Suppliers Association, Ninth Edition, as revised 1979).

FUEL FLOW RATE CALCULATIONS

Using the fuel gas molecular weight of 25.17 lb/lb-mol and a heating value of 1205.06 Btu/scf (based on LHV), the fuel flow rate is calculated as follows:

$$\begin{aligned}
 \text{Fuel Flow} &= \frac{(1875 \text{ hp}) (6875 \text{ Btu/hp-hr}) (25.17 \text{ lb/lb-mol})}{(379 \text{ scf fuel/lb-mol}) (1205.06 \text{ Btu/scf fuel})} = 710 \text{ lb fuel/hr} \\
 &= \frac{(710 \text{ lb fuel/hr})}{(25.17 \text{ lb fuel/lb-mol})} = 28.2 \text{ lbmol/hr} \\
 &= \frac{(710 \text{ lb fuel/hr}) (379 \text{ scf/lb-mol})}{(25.17 \text{ lb fuel/lb-mol})} = 10700 \text{ scf/hr}
 \end{aligned}$$

* (B) = (A) X (28.2 lb-mol/hr)

Sample calculation for CH4 fuel flow rate:

$$\text{CH4 Fuel Flow Rate} = (28.2 \text{ lb-mol fuel/hr})(0.6791 \text{ lb-mol CH4/lb-mol fuel}) = 19.2 \text{ lb-mol/hr}$$

The stoichiometric air-to-fuel ratio can be determined as follows:

$$\text{Air/Fuel (by weight)} = \frac{(73.94 \text{ lb-mol O}_2\text{/hr})(29 \text{ lb/lb-mol air})}{(28.2 \text{ lb-mol fuel/hr})(0.21 \text{ lb-mol O}_2\text{/lb-mol air})(25.17 \text{ lb/lb-mol fuel})} = 14.4 \text{ lb air/ lb fuel}$$

The air-to-fuel ratio data supplied by the manufacturer will be used in the remaining calculations unless the calculated stoichiometric air-to-fuel ratio is higher. If the calculated stoichiometric air-to-fuel ratio is higher, it will be used in the remaining calculations.

$$\text{Air Flow (Total)} = (710 \text{ lb/hr fuel})(21.5 \text{ lb air/lb fuel}) = 15300 \text{ lb/hr air}$$

$$\text{Exhaust Flow} = \frac{(563.45 \text{ lb-mol/hr})(379 \text{ scf/lb-mol})(1291^\circ\text{R (actual)})}{(60 \text{ min/hr}) (520^\circ\text{R (standard)})} = 8840 \text{ acfm @ } 831^\circ\text{F}$$

STACK EXIT VELOCITY CALCULATION

$$\text{Area of Stack} = \frac{\pi D^2}{4} = \frac{(3.1416)(1.65 \text{ ft})^2}{4} = 2.14 \text{ ft}^2$$

$$\text{Stack Velocity} = \frac{(8840 \text{ ft}^3/\text{min})}{(2.14 \text{ ft}^2) (60 \text{ sec/min})} = 68.8 \text{ ft/sec}$$

ENGINE CALCULATIONS (CAT 3606, EPN ENG-1 thru ENG-4)**EMISSION RATE CALCULATIONS**

The short-term emission rates are based on a combination of the emission factor and corresponding load that provides the peak emission rate. The long-term emission rates are based on the emission factors for 100% load.

Component	Short-Term		Long-Term	
	Factors	Basis	Factors	Basis
NOx	0.5 g/hp-hr	100 % load	0.5 g/hp-hr	100 % load
CO	2.58 g/hp-hr	100 % load	2.58 g/hp-hr	100 % load
VOC	0.95 g/hp-hr	100 % load	0.95 g/hp-hr	100 % load
SO2	10 gr S/100 scf	100 % load	10 gr S/100 scf	100 % load
PM	0.031 g/hp-hr	100 % load	0.031 g/hp-hr	100 % load
n-Hexane	0.00346 g/hp-hr	100 % load	0.00346 g/hp-hr	100 % load
Formaldehyde	0.2 g/hp-hr	100 % load	0.2 g/hp-hr	100 % load
Benzene	0.0014 g/hp-hr	100 % load	0.0014 g/hp-hr	100 % load
Toluene	0.00127 g/hp-hr	100 % load	0.00127 g/hp-hr	100 % load
Ethylbenzene	0.0001239 g/hp-hr	100 % load	0.0001239 g/hp-hr	100 % load
Xylene	0.000574 g/hp-hr	100 % load	0.000574 g/hp-hr	100 % load

The following emission rate calculations are based on the operating hp data.

NOx :

$$\text{Short-term} = \frac{(1875 \text{ hp}) (0.5 \text{ g NOx/hp-hr}) (100\% \text{ load})}{(100\%) (454 \text{ g/lb})} = 2.06 \text{ lb/hr}$$

$$\text{Long-term} = \frac{(1875 \text{ hp}) (0.5 \text{ g NOx/hp-hr}) (100\% \text{ load}) (8760 \text{ hr/yr})}{(100\%) (454 \text{ g/lb}) (2,000 \text{ lb/ton})} = 9.04 \text{ tons/yr}$$

CO:

$$\text{Short-term} = \frac{(1875 \text{ hp}) (2.58 \text{ g CO/hp-hr}) (100\% \text{ load})}{(100\%) (454 \text{ g/lb})} = 10.7 \text{ lb/hr}$$

$$\text{Long-term} = \frac{(1875 \text{ hp}) (2.58 \text{ g CO/hp-hr}) (100\% \text{ load}) (8760 \text{ hr/yr})}{(100\%) (454 \text{ g/lb}) (2,000 \text{ lb/ton})} = 46.7 \text{ tons/yr}$$

VOC:

$$\text{Short-term} = \frac{(1875 \text{ hp}) (0.95 \text{ g VOC/hp-hr}) (100\% \text{ load})}{(100\%) (454 \text{ g/lb})} = 3.92 \text{ lb/hr}$$

$$\text{Long-term} = \frac{(1875 \text{ hp}) (0.95 \text{ g VOC/hp-hr}) (100\% \text{ load}) (8760 \text{ hr/yr})}{(100\%) (454 \text{ g/lb}) (2,000 \text{ lb/ton})} = 17.2 \text{ tons/yr}$$

SO2 : Based on SO2 emission factor

$$\text{Short-term} = \frac{(10 \text{ gr S/100 scf}) (2 \text{ lb SO2/lb S}) (10700 \text{ scf/hr fuel})}{(7,000 \text{ gr/lb})} = 0.306 \text{ lb/hr}$$

$$\text{Long-term} = \frac{(0.306 \text{ lb/hr SO2}) (8760 \text{ hr/yr})}{(2,000 \text{ lb/ton})} = 1.34 \text{ tons/yr}$$

SO2: Based on H2S content in fuel

$$\text{Short-term} = \frac{(0 \text{ lb-mol/hr H2S}) (34.08 \text{ lb/lb-mol H2S}) (64.1 \text{ lb/lb-mol SO2})}{(34.08 \text{ lb/lb-mol H2S}) (1 \text{ lb-mol H2S/1 lb-mol SO2})} = 0 \text{ lb/hr}$$

$$\text{Long-term} = \frac{(0 \text{ lb/hr SO2}) (8760 \text{ hr/yr})}{(2,000 \text{ lb/ton})} = 0 \text{ ton/yr}$$

Since the emission estimates from the SO2 emission factor are greater, they will represent the SO2 emission rates from this source.

PROCESS AIR DATA

Air-to-Fuel Ratio (lb/lb)

21.5

If no air-to-fuel ratio is entered, the calculated stoichiometric air-to-fuel ratio will be used in the calculations.

FUEL GAS BASIS

Basis of Heating Value Specified for Firing Capacity (LHV/HHV):
 (LHV - Lower Heating Value, HHV - Higher Heating Value)

LHV

MISCELLANEOUS BASIS

Horsepower (hp) is the same as brake horsepower (bhp).
 All calculations are based on the standard conditions of 60°F and 1 atm.

NOTES

The NO_x emission factor is from the engine specifications, and it is within NSPS JJJJ requirements.
 The VOC, CO, and formaldehyde emission factors are from the catalyst specification sheet with an additional 25% safety factor or NSPS JJJJ emission factor requirements, whichever was lower. For VOC, the safety factor was capped at the NSPS JJJJ emission factor requirement.
 VOC emission factor does not include formaldehyde.
 The PM, n-Hexane, Benzene, Toluene, Ethylbenzene, and Xylene emission factors are from AP-42, Table 3.2-2, July 2000.
 Example calculation:
 PM factor from AP-42, Table 3.2-2 for filterable+cond. condition $[(.0000771 + .00991 \text{ lb/MMBtu}) * (6875 \text{ Btu/hp-hr}) * (454 \text{ g/lb}) / (10^6)] = 0.031 \text{ g/hp-hr}$
 SO₂ emission factor conservatively estimated as 29 gr/100 dscf.

Fuel Gas From Salado Draw 23 Compressor Station, Inlet

* HHV/LHV data are from *Steam, Its Generation and Use* (Babcock & Wilcox, 1972); HHV/LHV data for C7H16 are from *Engineering Data Book* (Gas Processors Suppliers Association, Ninth Edition, as revised 1979).

FUEL FLOW RATE CALCULATIONS

Using the fuel gas molecular weight of 25.17 lb/lb-mol and a heating value of 1205.06 Btu/scf (based on LHV), the fuel flow rate is calculated as follows:

$$\begin{aligned}
 \text{Fuel Flow} &= \frac{(1875 \text{ hp}) (6875 \text{ Btu/hp-hr}) (25.17 \text{ lb/lb-mol})}{(379 \text{ scf fuel/lb-mol}) (1205.06 \text{ Btu/scf fuel})} = 710 \text{ lb fuel/hr} \\
 &= \frac{(710 \text{ lb fuel/hr})}{(25.17 \text{ lb fuel/lb-mol})} = 28.2 \text{ lbmol/hr} \\
 &= \frac{(710 \text{ lb fuel/hr}) (379 \text{ scf/lb-mol})}{(25.17 \text{ lb fuel/lb-mol})} = 10700 \text{ scf/hr}
 \end{aligned}$$

ENGINE CALCULATIONS (CAT 3606, EPN ENG-1 thru ENG-4)**STOICHIOMETRIC CALCULATIONS**

Assuming complete combustion, the combustion products are determined as follows:

Fuel Composition and Flow Rate				Stoichiometric Oxygen Requirement		Stoichiometric Carbon Dioxide Production		Stoichiometric Water Production	
Formula	Mole %	(A) Mole Fraction	(B)* Flow Rate lb-mol/hr	(C) lb-mol/ lb-mol fuel	(B) X (C) lb-mol/hr	(D) lb-mol/ lb-mol fuel	(B) X (D) lb-mol/hr	(E) lb-mol/ lb-mol fuel	(B) X (E) lb-mol/hr

TOTAL	100	0.9996	28.19		73.94		40.6		66.6

* (B) = (A) X (28.2 lb-mol/hr)

Sample calculation for CH4 fuel flow rate:

$$\text{CH4 Fuel Flow Rate} = (28.2 \text{ lb-mol fuel/hr})(0.6791 \text{ lb-mol CH4/lb-mol fuel}) = 19.2 \text{ lb-mol/hr}$$

The stoichiometric air-to-fuel ratio can be determined as follows:

$$\text{Air/Fuel (by weight)} = \frac{(73.94 \text{ lb-mol O2/hr})(29 \text{ lb/lb-mol air})}{(28.2 \text{ lb-mol fuel/hr})(0.21 \text{ lb-mol O2/lb-mol air})(25.17 \text{ lb/lb-mol fuel})} = 14.4 \text{ lb air/ lb fuel}$$

The air-to-fuel ratio data supplied by the manufacturer will be used in the remaining calculations unless the calculated stoichiometric air-to-fuel ratio is higher. If the calculated stoichiometric air-to-fuel ratio is higher, it will be used in the remaining calculations.

$$\text{Air Flow (Total)} = (710 \text{ lb/hr fuel})(21.5 \text{ lb air/lb fuel}) = 15300 \text{ lb/hr air}$$

$$\text{Total Flow} = (563.45 \text{ lb-mol/hr})(28.3 \text{ lb/lb-mol}) = 15900 \text{ lb/hr}$$

$$\text{Exhaust Flow} = \frac{(563.45 \text{ lb-mol/hr})(379 \text{ scf/lb-mol})(1291^\circ\text{R (actual)})}{(60 \text{ min/hr})(520^\circ\text{R (standard)})} = 8840 \text{ acfm @ } 831^\circ\text{F}$$

STACK EXIT VELOCITY CALCULATION

$$\text{Area of Stack} = \frac{\pi D^2}{4} = \frac{(3.1416)(1.65 \text{ ft})^2}{4} = 2.14 \text{ ft}^2$$

$$\text{Stack Velocity} = \frac{(8840 \text{ ft}^3/\text{min})}{(2.14 \text{ ft}^2)(60 \text{ sec/min})} = 68.8 \text{ ft/sec}$$

ENGINE CALCULATIONS (CAT 3606, EPN ENG-1 thru ENG-4)**EMISSION RATE CALCULATIONS**

The short-term emission rates are based on a combination of the emission factor and corresponding load that provides the peak emission rate. The long-term emission rates are based on the emission factors for 100% load.

Component	Short-Term		Long-Term	
	Factors	Basis	Factors	Basis
NOx	0.5 g/hp-hr	100 % load	0.5 g/hp-hr	100 % load
CO	0.1875 g/hp-hr	100 % load	0.1875 g/hp-hr	100 % load
VOC	0.6875 g/hp-hr	100 % load	0.6875 g/hp-hr	100 % load
SO2	10 gr S/100 scf	100 % load	10 gr S/100 scf	100 % load
PM	0.031 g/hp-hr	100 % load	0.031 g/hp-hr	100 % load
Formaldehyde	0.05 g/hp-hr	100 % load	0.05 g/hp-hr	100 % load
Benzene	0.0014 g/hp-hr	100 % load	0.0014 g/hp-hr	100 % load
Toluene	0.00127 g/hp-hr	100 % load	0.00127 g/hp-hr	100 % load
Ethylbenzene	0.0001239 g/hp-hr	100 % load	0.0001239 g/hp-hr	100 % load
Xylene	0.000574 g/hp-hr	100 % load	0.000574 g/hp-hr	100 % load

The following emission rate calculations are based on the operating hp data.

NOx :

$$\text{Short-term} = \frac{(1875 \text{ hp}) (0.5 \text{ g NOx/hp-hr}) (100\% \text{ load})}{(100\%) (454 \text{ g/lb})} = 2.06 \text{ lb/hr}$$

$$\text{Long-term} = \frac{(1875 \text{ hp}) (0.5 \text{ g NOx/hp-hr}) (100\% \text{ load}) (8760 \text{ hr/yr})}{(100\%) (454 \text{ g/lb}) (2,000 \text{ lb/ton})} = 9.04 \text{ tons/yr}$$

CO:

$$\text{Short-term} = \frac{(1875 \text{ hp}) (0.1875 \text{ g CO/hp-hr}) (100\% \text{ load})}{(100\%) (454 \text{ g/lb})} = 0.774 \text{ lb/hr}$$

$$\text{Long-term} = \frac{(1875 \text{ hp}) (0.1875 \text{ g CO/hp-hr}) (100\% \text{ load}) (8760 \text{ hr/yr})}{(100\%) (454 \text{ g/lb}) (2,000 \text{ lb/ton})} = 3.39 \text{ tons/yr}$$

VOC:

$$\text{Short-term} = \frac{(1875 \text{ hp}) (0.6875 \text{ g VOC/hp-hr}) (100\% \text{ load})}{(100\%) (454 \text{ g/lb})} = 2.84 \text{ lb/hr}$$

$$\text{Long-term} = \frac{(1875 \text{ hp}) (0.6875 \text{ g VOC/hp-hr}) (100\% \text{ load}) (8760 \text{ hr/yr})}{(100\%) (454 \text{ g/lb}) (2,000 \text{ lb/ton})} = 12.4 \text{ tons/yr}$$

SO2 : Based on SO2 emission factor

$$\text{Short-term} = \frac{(10 \text{ gr S/100 scf}) (2 \text{ lb SO2/lb S}) (10700 \text{ scf/hr fuel})}{(7,000 \text{ gr/lb})} = 0.306 \text{ lb/hr}$$

$$\text{Long-term} = \frac{(0.306 \text{ lb/hr SO2}) (8760 \text{ hr/yr})}{(2,000 \text{ lb/ton})} = 1.34 \text{ tons/yr}$$

SO2: Based on H2S content in fuel

$$\text{Short-term} = \frac{(0 \text{ lb-mol/hr H2S}) (34.08 \text{ lb/lb-mol H2S}) (64.1 \text{ lb/lb-mol SO2})}{(34.08 \text{ lb/lb-mol H2S}) (1 \text{ lb-mol H2S/1 lb-mol SO2})} = 0 \text{ lb/hr}$$

$$\text{Long-term} = \frac{(0 \text{ lb/hr SO2}) (8760 \text{ hr/yr})}{(2,000 \text{ lb/ton})} = 0 \text{ ton/yr}$$

Since the emission estimates from the SO2 emission factor are greater, they will represent the SO2 emission rates from this source.

ENGINE CALCULATIONS (CAT 3606, EPN ENG-1 thru ENG-4)**EMISSION RATE CALCULATIONS CONTINUED**

PM :

$$\text{Short-term} = \frac{(1875 \text{ hp}) (0.031 \text{ g PM/hp-hr}) (100\% \text{ load})}{(100\%) (454 \text{ g/lb})} = 0.128 \text{ lb/hr}$$

$$\text{Long-term} = \frac{(1875 \text{ hp}) (0.031 \text{ g PM/hp-hr}) (100\% \text{ load}) (8760 \text{ hr/yr})}{(100\%) (454 \text{ g/lb}) (2,000 \text{ lb/ton})} = 0.564 \text{ ton/yr}$$

SAMPLE CALCULATIONS FOR NOx

$$\text{Short-term} = \frac{(2.06 \text{ lb NOx/hr}) (454 \text{ g/lb})}{(3,600 \text{ sec/hr})} = 0.26 \text{ g/s NOx}$$

$$\text{Long-term} = \frac{(9.04 \text{ tons/yr}) (2,000 \text{ lb/ton}) (454 \text{ g/lb})}{(8,760 \text{ hr/yr}) (3,600 \text{ sec/hr})} = 0.26 \text{ g/s NOx}$$

SAMPLE CALCULATIONS FOR NO2

The NOx/NO2 ratio is from §106.512.

$$\text{Short-term} = \frac{(2.06 \text{ lb NOx/hr}) (454 \text{ g/lb}) (0.4 \text{ g NO2/g NOx})}{(3,600 \text{ sec/hr})} = 0.104 \text{ g/s NO2}$$

$$\text{Long-term} = \frac{(9.04 \text{ tons NOx/yr}) (2,000 \text{ lb/ton}) (454 \text{ g/lb}) (0.4 \text{ g NO2/g NOx})}{(8,760 \text{ hr/yr}) (3,600 \text{ sec/hr})} = 0.104 \text{ g/s NO2}$$

CONVERSION CALCULATIONS TO METRIC

$$\text{Stack Height} = (29 \text{ ft}) (0.3048 \text{ m/ft}) = 8.84 \text{ m}$$

$$\text{Stack Diameter} = (1.65 \text{ ft}) (0.3048 \text{ m/ft}) = 0.503 \text{ m}$$

$$\text{Stack Exit Vel.} = (68.8 \text{ ft/sec}) (0.3048 \text{ m/ft}) = 21 \text{ m/s}$$

$$\text{Stack Exit Temp.} = \frac{(831 - 32)^{\circ}\text{F} (1 \text{ }^{\circ}\text{K/1 }^{\circ}\text{C})}{1.8^{\circ}\text{F/}^{\circ}\text{C}} + 273.16 \text{ K} = 717 \text{ K}$$

PROPERTIES USED IN EMISSIONS INVENTORIES

$$\text{Engine Design Capacity} = \frac{(1875 \text{ hp}) (6875 \text{ Btu/hp-hr})}{(1,000,000/\text{MM})} = 12.90 \text{ MM Btu/hr}$$

$$\text{Annual Process Rate} = \frac{(10700 \text{ scf/hr}) (8760 \text{ hr/yr})}{(1,000,000/\text{MM})} = 93.7 \text{ MM scf/yr}$$

$$\text{Percentage of Max. Emissions Potential} = \frac{(1875 \text{ hp-operating}) (8760 \text{ hr/yr-operating}) (100\%)}{(1875 \text{ hp-design}) (8760 \text{ hr/yr-potential})} = 100 \%$$

EMISSION FACTORS

ENTER ONLY ONE EMISSION FACTOR FOR EACH POLLUTANT FOR EACH TERM

If multiple factors are entered for a pollutant, the leftmost nonzero factor will be used in emission calculations.

Short-Term Emission Factors				ppmvd in Stack Gas @		Grains Sulfur per 100 dscf Fuel Gas @	Grains per 100 dscf Stack Gas	lb/MM scf AP-42 Fuel Gas @	Weight % VOC in TOC
Pollutant	Formula	lb/MM Btu (HHV)	lb/MM Btu (LHV)	% O ₂	lb/hr	Btu/scf (LHV)		Btu/scf (HHV)	
Sulfur Dioxide	SO ₂			5		1205		1020	
Nitrogen Oxides	NO _x					29		100	
Particulate Matter	PM							7.6	
Carbon Monoxide	CO							84	
Total Organics	TOC								
Volatile Organics	VOC							5.5	

Long-Term Emission Factors				ppmvd in Stack Gas @		Grains Sulfur per 100 dscf Fuel Gas @	Grains per 100 dscf Stack Gas	lb/MM scf AP-42 Fuel Gas @	Weight % VOC in TOC
Pollutant	Formula	lb/MM Btu (HHV)	lb/MM Btu (LHV)	% O ₂	lb/hr	Btu/scf (LHV)		Btu/scf (HHV)	
Sulfur Dioxide	SO ₂			5		1205		1020	
Nitrogen Oxides	NO _x					29		100	
Particulate Matter	PM							7.6	
Carbon Monoxide	CO							84	
Total Organics	TOC								
Volatile Organics	VOC							5.5	

Note: When entering values in ppmvd for nitrogen oxides and volatile organics, the subsequent calculations presume molecular weights of 46.01 for nitrogen oxides (NO₂) and 44.09 for volatile organics (C₃H₈). The molecular weight for VOC can be changed on Rows 127 and 128. Also, note that the factors in terms of scf presume standard conditions of 1 atm and 60°F. These standard conditions are presumed throughout the calculations

N2	1.51	0.0151	0.033	0.0	0.000	0.0	0.000	0.0	0.000
CO2	6.11	0.0611	0.134	0.0	0.000	0.0	0.000	0.0	0.000
TOTAL	100	0.9996	2.19		5.74		3.16		5.17

* (B) = (A) X (2.19 lb-mol/hr)

Note that for the molar calculations, SO2 is grouped with CO2. This will have a negligible impact on MW and other calculations.

GAS COMBUSTION CALCULATIONS (TEG Reboiler, EPN REB-1)**AIR SUPPLY CALCULATION**

Oxygen in Supplied Air: (5.74 lb-mol stoichiometric O₂/hr) (1.1) = 6.31 lb-mol total O₂/hr
 = (6.31 lb-mol O₂/hr) (32.00 lb/lb-mol) = 202 lb O₂/hr

Nitrogen in Supplied Air: (6.31 lb-mol O₂/hr) (3.76 lb-mol N₂/lb-mol O₂ in air) = 23.7 lb-mol total N₂/hr
 = (23.7 lb-mol N₂/hr) (28.01 lb/lb-mol) = 664 lb N₂/hr

Bone-dry (BD) Supplied Air: (6.31 lb-mol O₂/hr) + (23.7 lb-mol N₂/hr) = 30 lb-mol BD air/hr
 = (202 lb O₂/hr) + (664 lb N₂/hr) = 866 lb BD air/hr

Moisture in Supplied Air: (866 lb BD air/hr) (0.0132 lb water/lb BD air) = 11.4 lb water/hr
 = (11.4 lb water/hr) (lb-mol water/18.02 lb water) = 0.633 lb-mol water/hr

Note: The specific humidity of 0.0132 lb water/lb BD air was determined from the relative humidity (60%), the atmospheric pressure (14.7 psia), the ambient temperature (80°F), and a DIPPR correlation of water vapor pressure data.

Total Air: (6.31 lb-mol O₂/hr) + (23.7 lb-mol N₂/hr) + (0.633 lb-mol water/hr) = 30.6 lb-mol/hr
 = (202 lb O₂/hr) + (664 lb N₂/hr) + (11.4 lb water/hr) = 877 lb/hr
 = (30.6 lb-mol/hr) (379 scf/lb-mol) (hr/60 min) = 193 scfm @ 60°F
 = (30.6 lb-mol/hr) (387 scf @ 70°F/lb-mol) (hr/60 min) = 197 scfm @ 70°F

EXHAUST FLOW CALCULATION

Exhaust Components	From Air (lb-mol/hr)	From Fuel (lb-mol/hr)	From Combustion (lb-mol/hr)	Total (lb-mol/hr)	(A) Mole Fraction Wet Basis	(B) Component MW (lb/lb-mol)	(A) X (B) Exhaust MW (lb/lb-mol)	Mole Fraction Dry Basis

Carbon Monoxide	CO								84	
Total Organics	TOC									
Volatile Organics	VOC								5.5	

Long-Term Emission Factors				ppmvd in Stack Gas @ 5		Grains Sulfur per 100 dscf Fuel Gas @ 1206		Grains per 100 dscf Stack Gas	lb/MM scf AP-42 Fuel Gas @ 1020	Weight % VOC in TOC
Pollutant	Formula	lb/MM Btu (HHV)	lb/MM Btu (LHV)	% O ₂	lb/hr	Btu/scf (LHV)			Btu/scf (HHV)	
Sulfur Dioxide	SO ₂					29				
Nitrogen Oxides	NO _x								100	
Particulate Matter	PM								7.6	
Carbon Monoxide	CO								84	
Total Organics	TOC									
Volatile Organics	VOC								5.5	

Note: When entering values in ppmvd for nitrogen oxides and volatile organics, the subsequent calculations presume molecular weights of 46.01 for nitrogen oxides (NO₂) and 44.09 for volatile organics (C₃H₈). The molecular weight for VOC can be changed on Rows 127 and 128. Also, note that the factors in terms of scf presume standard conditions of 1 atm and 60°F. These standard conditions are presumed throughout the calculations

GAS COMBUSTION CALCULATIONS (Heater Treaters, EPN HTR-1 thru HTR-6)**AIR SUPPLY CALCULATION**

Oxygen in Supplied Air: (23 lb-mol stoichiometric O₂/hr) (1.1) = 25.3 lb-mol total O₂/hr
 = (25.3 lb-mol O₂/hr) (32.00 lb/lb-mol) = 810 lb O₂/hr

Nitrogen in Supplied Air: (25.3 lb-mol O₂/hr) (3.76 lb-mol N₂/lb-mol O₂ in air) = 95.1 lb-mol total N₂/hr
 = (95.1 lb-mol N₂/hr) (28.01 lb/lb-mol) = 2660 lb N₂/hr

Bone-dry (BD) Supplied Air: (25.3 lb-mol O₂/hr) + (95.1 lb-mol N₂/hr) = 120 lb-mol BD air/hr
 = (810 lb O₂/hr) + (2660 lb N₂/hr) = 3470 lb BD air/hr

Moisture in Supplied Air: (3470 lb BD air/hr) (0.0132 lb water/lb BD air) = 45.8 lb water/hr
 = (45.8 lb water/hr) (lb-mol water/18.02 lb water) = 2.54 lb-mol water/hr

Note: The specific humidity of 0.0132 lb water/lb BD air was determined from the relative humidity (60%), the atmospheric pressure (14.7 psia), the ambient temperature (80°F), and a DIPPR correlation of water vapor pressure data.

Total Air: (25.3 lb-mol O₂/hr) + (95.1 lb-mol N₂/hr) + (2.54 lb-mol water/hr) = 123 lb-mol/hr
 = (810 lb O₂/hr) + (2660 lb N₂/hr) + (45.8 lb water/hr) = 3520 lb/hr
 = (123 lb-mol/hr) (379 scf/lb-mol) (hr/60 min) = 777 scfm @ 60°F
 = (123 lb-mol/hr) (387 scf @ 70°F/lb-mol) (hr/60 min) = 793 scfm @ 70°F

EMISSION ESTIMATE FOR ATMOSPHERIC LOADING OPERATIONS

EMISSION FACTOR EQUATION

$$L = \frac{12.46 S P M}{T}$$

(AP-42, Fifth Edition, Equation 5.2-1, January 1995)

where: L = Loading loss (lb/1000 gal liquid loaded)
M = Vapor molecular weight of liquid loaded (lb/lb-mol)
P = True vapor pressure of liquid loaded (psia)
T = Temperature of bulk liquid loaded (°R)
S = Saturation factor (1.45 for splash loading, 1 for vapor-balanced loading, 0.6 for submerged from Table 5.2-1)

HOURLY EMISSIONS ESTIMATES

EPN	Loading Vessel	Liquid Loaded	Type of Loading	Saturation Factor, S	Max. Temp. (°F)	Max. Temp. (°R)	Mol. Wt. (lb/lb-mol)	Vapor Pressure ⁽¹⁾ (psia)	Loading Loss (lb/1000 gal)	Capture Efficiency (%)	Maximum Loading Rate ⁽²⁾ (gal/hr)	Uncontrolled Loading Emissions (lb/hr)	Uncontrolled Loading HAPs Emissions (lb/hr)	Uncontrolled Loading H ₂ S Emissions (lb/hr)
LOAD	Truck	Water	submerged	0.6	95.0	555	50	6.34	4.27	0	8400	0.359	1.7E-05	2.3E-05
											Total	0.359	1.7E-05	2.3E-05

ANNUAL EMISSIONS ESTIMATES

EPN	Loading Vessel	Liquid Loaded	Type of Loading	Saturation Factor, S	Average Temp. (°F)	Average Temp. (°R)	Mol. Wt. (lb/lb-mol)	Vapor Pressure ⁽¹⁾ (psia)	Loading Loss (lb/1000 gal)	Capture Efficiency (%)	Annual Loading Rate ⁽³⁾ (gal/yr)	Uncontrolled Loading Emissions (tons/yr)	Uncontrolled Loading HAPs Emissions (tons/yr)	Uncontrolled Loading H ₂ S Emissions (tons/yr)
LOAD	Truck	Water	submerged	0.6	66.0	526	50	3.80	2.70	0	3,066,000	0.041	2.0E-06	2.6E-06
											Total	0.041	2.0E-06	2.6E-06

SAMPLE CALCULATIONS:

Condensate Annual Emissions

$$\text{Loading loss} = \frac{(12.46) (0.6) (3.80088765687673 \text{ psia}) (50 \text{ lb/lb-mol})}{(526 \text{ °R})}$$

= 2.7 lb/1000 gal condensate loaded

$$\text{Loading estimates} = (\text{Loading loss emission factor}) (\text{Annual loading rate}) (\text{VOC Content}) / 100$$

$$= (2.7 \text{ lb/1000 gal}) (3066000 \text{ gal/yr}) (100\%) / 100\%$$

= 8280 lb/yr

= 4.14 tons/yr

NOTES:

(0) Water truck loading emissions calculated using 1% of condensate properties, except for J&S.

(1) Values for RVP=5.64537 from API Correlation.

(2) The hourly loading rate is based on loading one

200 -bbl water truck in one hour.

(3) The annual loading rate of water is based on

200 -bbl water/day.

W&S EMISSION ESTIMATE FOR TK-1 thru TK-3

Tank FIN	TK-1 thru TK-3	
Description	Condensate Tank	
Days per year	365	days/year
<u>Tank Parameters</u>		
Material Stored	Crude Oil	
Flash in vessel (Yes/No)	Yes	
Vapor Balanced Loading (Yes/No)	No	Yes = truck loading vapors are vented to tank.
Tank Max/Min levels client specified (Yes/No)	No	
Annual sum of liquid level increases client specified (Yes/No)	No	
Tanks construction	Welded	
Insulated Tank (Yes/No)	No	
Heated Tank (Yes/No)	No	
Tank Diameter (D)	15.5	ft
Tank Shell Height (Hs)	24	ft
Maximum Liquid Height (Hlx)	23	ft
Minimum Liquid Height (Hln)	1	ft
Annual Sum of the Increases in Liquid Level (ΣH_{qi})	81447	ft/yr
Roof Type	Cone	
Cone Roof Slope (Sr)	0.0625	ft/ft
Roof Paint Color	Green, Dark	
Roof Paint Condition	Average	
Tank Roof Surface Solar Absorptance (α_r)	0.9	dimensionless (AP-42 Table 7.1-6)
Shell Paint Color	Green, Dark	
Shell Paint Condition	Average	
Tank Shell Surface Solar Absorptance (α_s)	0.9	dimensionless (AP-42 Table 7.1-6)
Breather Vent Pressure Setting (PBp)	0.03	psig
Breather Vent Vacuum Setting (PBV)	-0.03	psig
Vent Setting Correction Factor (Kb)	1.00	dimensionless

Stored Material Properties

Vapor Molecular Weight (Mv)	50	lb/lb-mol
API Gravity (API)	41.03	° API
Reid Vapor Pressure (RVP)	5.645	psi
Working Loss Product Factor (Kp)	0.75	dimensionless

Environment Properties - (AP-42, CH. 7 - Table 7.1-7)

Met Data Location	Roswell, NM	
Met Data Period	Annual Average	
Average Daily Max Ambient Temperature	75.8	°F
Average Daily Min Ambient Temperature	47.6	°F
Solar Insolation (I)	1722	Btu/ft ² d
Atmospheric Pressure (Pa)	12.88	psia

Operational Parameters

Actual Throughput (BBL/day)	7500	BBL/day
Actual Throughput (BBL/year)	2737500	BBL/year
Actual Throughput (Gal/year)	114975000	Gal/year
Max Fill Rate (FRm) (BBL/hr)	313	BBL/hr

Constants

Universal Gas Constant (R)	10.731	psia ft ³ /lb-mol °R
----------------------------	--------	---------------------------------

Standing and Working Loss Calculations

Average Daily Max Ambient Temperature (Tax)	535.5	°R
Average Daily Min Ambient Temperature (Tan)	507.3	°R

$$dT_v = 48^\circ R$$

$$dT_a = T_{ax} - T_{an}$$

$$dT_a = 535.5^\circ R - 507.3^\circ R$$

$$dT_a = 28.2^\circ R$$

Equation (1-11)

$$dP_v = P_{vx} - P_{vn}$$

$$= 5.12 \text{ psia} - 3.29 \text{ psia}$$

Equation (1-9)

$$dP_v = 1.83 \text{ psia}$$

$$P_{vx} = \exp\{[2799/(T_{lx} + 459.7) - 2.227]\log_{10}(RVP) - (7261/(T_{lx} + 459.7) + 12.82)\}$$

Equation (Figure 7.1-13b)

$$= \exp\{[(2799/542.1^\circ R) - 2.227]\log(5.65) - (7261/542.1^\circ R) + 12.82\}$$

$$P_{vx} = 5.12 \text{ psia}$$

$$P_{vn} = \exp\{[2799/(T_{ln} + 459.7) - 2.227]\log_{10}(RVP) - (7261/(T_{ln} + 459.7) + 12.82)\}$$

Equation (Figure 7.1-13b)

$$= \exp\{[(2799/518.1^\circ R) - 2.227]\log(5.65) - (7261/518.1^\circ R) + 12.82\}$$

$$P_{vn} = 3.29 \text{ psia}$$

$$dP_b = P_{Bp} - P_{Bv}$$

Equation (1-10)

$$= 0.03 \text{ psig} - (-0.03 \text{ psig})$$

$$dP_b = 0.06 \text{ psia}$$

$$K_s = 1/[1 + (0.053)(P_{va})(H_{vo})]$$

Equation (1-21)

$$= 1/[1 + (0.053)(4.13 \text{ psia})(12.66 \text{ ft})]$$

$$K_s = 0.265$$

Working Loss

$$L_w = (V_q)(K_n)(K_p)(W_v)(K_b)$$

Equation (1-35)

$$= (15368325 \text{ ft}^3/\text{year})(1)(0.75)(0.036 \text{ lb/ft}^3)(1)$$

$$L_w = 415300 \text{ lb/year}$$

$$V_q = (\Sigma H_{qi})(\pi/4)D^2$$

Equation (1-38)

$$= (81400 \text{ ft/yr})(\pi/4)*(15.5 \text{ ft})^2$$

$$V_q = 15368300 \text{ ft}^3/\text{year}$$

$$\text{If turnovers} > 36, K_n = (180 + N)/6N$$

Equation (1-35)

$$\text{If turnovers} \leq 36 \text{ or flash occurs in the vessel, } K_n = 1$$

Equation (1-35)

$$K_n = 1$$

$$N = \Sigma H_{qi} / (H_{lx} - H_{ln})$$

Equation (1-36)

$$= (81400 \text{ ft/yr})/(23 \text{ ft} - 1 \text{ ft})$$

$$N = 3700 \text{ turnovers/year}$$

$$\Sigma H_{qi} = (5.614 \text{ Q}) / ((\pi/4) D^2)$$

Equation (1-37) or provided by client

$$= (5.614 \text{ ft}^3/\text{bbl}) * (2737500 \text{ BBL/year}) / ((\pi/4) * (15.5 \text{ ft})^2)$$

$$\Sigma H_{qi} = 81400 \text{ ft/yr}$$

$$K_p = 0.75$$

Equation (1-35)

$$K_b = 1.00$$

Equation (1-37)

Total Working and Standing Losses

$$L_t = L_s + L_w$$

Equation (1-1)

$$= 2439 \text{ lb/year} + 415300 \text{ lb/year}$$

$$= 417700 \text{ lb/year}$$

$$= 209 \text{ tpy}$$

Maximum Hourly Working Loss - Pvx based on 95°F or Tlx, whichever is greater

$$L_{max} = \{(M_v)(P_{vx})/[(R)(95+459.7)]\}(5.614)(F_{Rm})(K_n)(K_p), \text{ where } K_n = 1 \text{ and } K_p = 1 \text{ for worst case}$$

$$= \{(50 \text{ lb/lbmol})(6.35 \text{ psia})/[(10.731 \text{ psia ft}^3/\text{lb-mol}^\circ R)(95+459.7)^\circ R]\}(5.614 \text{ ft}^3/\text{bbl})(313 \text{ bbl/hr})(1)(1)$$

$$L_{max} = 93.78 \text{ lb/hr}$$

W&S EMISSION ESTIMATE FOR TK-S1

Tank FIN	TK-S1
Description	100-bbl Slop Water Tank (Vented to Atmosphere)
Days per year	365 days/year

Tank Parameters

Material Stored	Produced Water	
Flash in vessel (Yes/No)	Yes	
Vapor Balanced Loading (Yes/No)	No	Yes = truck loading vapors are vented to tank.
Tank Max/Min levels client specified (Yes/No)	No	
Annual sum of liquid level increases client specified (Yes/No)	No	
Tanks construction	Welded	
Insulated Tank (Yes/No)	No	
Heated Tank (Yes/No)	No	
Tank Diameter (D)	9.5	ft
Tank Shell Height (Hs)	8	ft
Maximum Liquid Height (Hlx)	7	ft
Minimum Liquid Height (Hln)	1	ft
Annual Sum of the Increases in Liquid Level (ΣHqi)	5782	ft/yr
Roof Type	Cone	
Cone Roof Slope (Sr)	0.0625	ft/ft
Roof Paint Color	Green, Dark	
Roof Paint Condition	Average	
Tank Roof Surface Solar Absorptance (αr)	0.9	dimensionless (AP-42 Table 7.1-6)
Shell Paint Color	Green, Dark	
Shell Paint Condition	Average	
Tank Shell Surface Solar Absorptance (αs)	0.9	dimensionless (AP-42 Table 7.1-6)
Breather Vent Pressure Setting (PBp)	0.03	psig
Breather Vent Vacuum Setting (PBV)	-0.03	psig
Vent Setting Correction Factor (Kb)	1.00	dimensionless

Stored Material Properties

Vapor Molecular Weight (Mv)	50	lb/lb-mol
API Gravity (API)	74.28	° API
Reid Vapor Pressure (RVP)	11.60	psi
Working Loss Product Factor (Kp)	1	dimensionless

Environment Properties - (AP-42, CH. 7 - Table 7.1-7)

Met Data Location	Roswell, NM
Met Data Period	Annual Average
Average Daily Max Ambient Temperature	75.8 °F
Average Daily Min Ambient Temperature	47.6 °F
Solar Insolation (I)	1722 Btu/ft² d
Atmospheric Pressure (Pa)	12.88 psia

Operational Parameters

Actual Throughput (BBL/day)	200	BBL/day
Actual Throughput (BBL/year)	73000	BBL/year
Actual Throughput (Gal/year)	3066000	Gal/year
Max Fill Rate (FRm) (BBL/hr)	9	BBL/hr

Constants

Universal Gas Constant (R)	10.731	psia ft³/lb-mol °R
----------------------------	--------	--------------------

Standing and Working Loss Calculations

Average Daily Max Ambient Temperature (Tax)	535.5	°R
Average Daily Min Ambient Temperature (Tan)	507.3	°R
Shell Radius (Rs)	4.75	ft
Liquid Height (Hl)	3.50	ft
Roof Height (Hr)	0.297	ft
Roof Outage (Hro)	0.099	ft
Vapor Space Outage (Hvo)	4.60	ft
Vapor Space Volume (Vv)	326	ft ³
Net Working Loss Throughput (Vq)	409822	ft ³ /year
Tank Shell Height to Tank Diameter (Hs/D)	0.842	dimensionless
Average Daily Ambient Temperature (Taa)	521.4	°R
Liquid Bulk Temperature (Tb)	526.0	°R
Average Daily Liquid Surface Temperature (Tla)	530.8	°R
Daily Max Liquid Surface Temperature (Tlx)	543.0	°R
Daily Min Liquid Surface Temperature (Tln)	518.7	°R
Average Vapor Temperature (Tv)	535.6	°R
Vapor Pressure at TLA (Pva)	10.8	psia
Vapor Pressure at TLX (Pvx)	13.0	psia
Vapor Pressure at TLN (Pvn)	8.97	psia
Vapor Pressure at Tb	10.1	psia
Vapor Density (Wv)	0.094	lb/ft ³
Average Daily Ambient Temperature Range (dTa)	28.2	°R
Average Daily Vapor Temperature Range (dTv)	48.6	°R
Average Daily Vapor Pressure Range (dPv)	4.01	psia
Breather Vent Pressure Range (dPb)	0.060	psia
Vapor Space Expansion Factor (Ke)	2.03	per day
Vented Vapor Saturation Factor (Ks)	0.275	dimensionless
Standing Losses (Ls)	6247	lb/year
Turnovers per Period (N)	964	turnovers/year
Turnover Factor (Kn)	1.00	dimensionless
Working Losses (Lw)	38648	lb/year
Total Routine Losses (Lt)	44900	lb/year
Max Hourly Working Loss (lb/hr)	6.51	lb/hr
Uncontrolled Annual total (Lt - tons/year)	22.5	tpy

Assuming W&S Emissions from the slop tank are 1% of the emissions calculated based on condensate properties.

Max Hourly Working Loss (lb/hr)	0.065	lb/hr
Pre-VRU Reduction Annual total (tons/year)	0.225	tpy

W&S EMISSION ESTIMATE FOR TK-S2

Tank FIN	TK-S2	
Description	Slop Condensate Tank, 750-bbl

Section 7

Information Used To Determine Emissions

Information Used to Determine Emissions shall include the following:

- If manufacturer data are used, include specifications for emissions units and control equipment, including control efficiencies specifications and sufficient engineering data for verification of control equipment operation, including design drawings, test reports, and design parameters that affect normal operation.
 - If test data are used, include a copy of the complete test report. If the test data are for an emissions unit other than the one being permitted, the emission units must be identical. Test data may not be used if any difference in operating conditions of the unit being permitted and the unit represented in the test report significantly effect emission rates.
 - If the most current copy of AP-42 is used, reference the section and date located at the bottom of the page. Include a copy of the page containing the emissions factors, and clearly mark the factors used in the calculations.
 - If an older version of AP-42 is used, include a complete copy of the section.
 - If an EPA document or other material is referenced, include a complete copy.
 - Fuel specifications sheet.
 - If computer models are used to estimate emissions, include an input summary (if available) and a detailed report, and a disk containing the input file(s) used to run the model. For tank-flashing emissions, include a discussion of the method used to estimate tank-flashing emissions, relative thresholds (i.e., permit or major source (NSPS, PSD or Title V)), accuracy of the model, the input and output from simulation models and software, all calculations, documentation of any assumptions used, descriptions of sampling methods and conditions, copies of any lab sample analysis.
-

The most current version of AP-42 Section 7.1 (dated June 2020) is used to calculate storage tank emissions. This section of AP-42 is not included here except Page 3-11, which contains Equation 3-29 used to calculated short-term condensate tank emissions during filling.

The most current version of AP-42 Tables 1.4-1 and 1.4-2 (dated July 1998) is attached.

The most current version of AP-42 Section 5.2 (dated July 2008) is used to calculate loading VOC emissions

The most current version of Table 4 from the TCEQ “Flares and Vapor Oxidizers” technical guidance (dated October 2000) is used to calculate flare CO and NOx emissions.

VOC emissions from equipment leak fugitives are calculated using emission factors from the TCEQ document “Air Permit Technical Guidance for Chemical Sources: Fugitive Guidance” dated June 2018. A copy of the page containing the emissions factors is attached.

The Salado Draw 23 CTB and Salado Draw 23 CS analyses are attached.

Engine and catalyst specification sheets are attached.

The ProMax simulation results are attached.

ambient air, heat gain to the bulk liquid from insolation is almost entirely through the tank shell; thus the liquid bulk temperature is not sensitive to H_S/D and may be calculated using the following equation:

$$T_B = T_{AA} + 0.003 \alpha_S I \quad (1-31)$$

where:

- T_B = liquid bulk temperature, °R
- T_{AA} = average daily ambient temperature, °R, as calculated in Note 4
- α_S = tank shell surface solar absorptance, dimensionless; see Table 7.1-6
- I = average daily total insolation factor, Btu/(ft² day); see Table 7.1-7.

6. The average vapor temperature, T_V , for an uninsulated tank may be calculated using the following equation:

$$T_V = \frac{[2.2 (H_S/D) + 1.1] T_{AA} + 0.8 T_B + 0.021 \alpha_R I + 0.013 (H_S/D) \alpha_S I}{2.2 (H_S/D) + 1.9} \quad (1-32)$$

where:

- H_S = tank shell height, ft
- D = tank diameter, ft,
- T_{AA} = average daily ambient temperature, °R
- T_B = liquid bulk temperature, °R
- α_R = tank roof surface solar absorptance, dimensionless
- α_S = tank shell surface solar absorptance, dimensionless
- I = average daily total insolation factor, Btu/(ft² day).

API assigns a default value of $H_S/D = 0.5$ and an assumption of $\alpha_R = \alpha_S$, resulting in the simplified equation shown below for an uninsulated tank:²²

$$T_V = 0.7 T_{AA} + 0.3 T_B + 0.009 \alpha I \quad (1-33)$$

where:

- α = average tank surface solar absorptance, dimensionless

When the shell is insulated, but not the roof, the temperature equations are independent of H_S/D .

$$T_V = 0.6 T_{AA} + 0.4 T_B + 0.01 \alpha_R I \quad (1-34)$$

When the tank shell and roof are fully insulated, the temperatures of the vapor space and the liquid surface are taken as equal to the temperature of the bulk liquid.

7.1.3.1.2 Working Loss

The fixed roof tank working loss, L_w , refers to the loss of stock vapors as a result of tank filling operations. Fixed roof tank working losses can be estimated from:

$$L_W = V_Q K_N K_P W_V K_B \quad (1-35)$$

where:

L_W = working loss, lb/yr

V_Q = net working loss throughput, ft³/yr, see Note 1

K_N = working loss turnover (saturation) factor, dimensionless

for turnovers > 36, $K_N = (180 + N)/6N$

for turnovers ≤ 36, $K_N = 1$

for tanks that are vapor balanced and tanks in which flashing occurs, $K_N = 1$ regardless of the number of turnovers; further adjustment of K_N may be appropriate in the case of splash loading into a tank.

N = number of turnovers per year, dimensionless:

$$N = \Sigma H_{QI} / (H_{LX} - H_{LN}) \quad (1-36)$$

ΣH_{QI} = the annual sum of the increases in liquid level, ft/yr

If ΣH_{QI} is unknown, it can be estimated from pump utilization records. Over the course of a year, the sum of increases in liquid level, ΣH_{QI} , and the sum of decreases in liquid level, ΣH_{QD} , will be approximately the same. Alternatively, ΣH_{QI} may be approximated as follows:

$$\Sigma H_{QI} = (5.614 Q) / ((\pi/4) D^2) \quad (1-37)$$

5.614 = the conversion of barrels to cubic feet, ft³/bbl

Q = annual net throughput, bbl/yr

For horizontal tanks, use D_E (Equation 1-14) in place of D in Equation 1-37

H_{LX} = maximum liquid height, ft

If the maximum liquid height is unknown, for vertical tanks use one foot less than the shell height and for horizontal tanks use $(\pi/4) D$ where D is the diameter of a vertical cross-section of the horizontal tank

H_{LN} = minimum liquid height, ft

If the minimum liquid height is unknown, for vertical tanks use 1 and for horizontal tanks use 0

K_P = working loss product factor, dimensionless

for crude oils, $K_P = 0.75$; adjustment of K_P may be appropriate in the case of splash loading into a tank

for all other organic liquids, $K_P = 1$

W_V = vapor density, lb/ft³, see Equation 1-22

K_B = vent setting correction factor, dimensionless, see Note 2 for open vents and for a vent setting range up to ± 0.03 psig, $K_B = 1$

1. Net Working Loss Throughput.

The net working loss throughput, V_Q , is the volume associated with increases in the liquid level, and is calculated as follows:

Table 1.4-1. EMISSION FACTORS FOR NITROGEN OXIDES (NO_x) AND CARBON MONOXIDE (CO)
FROM NATURAL GAS COMBUSTION^a

Combustor Type (MMBtu/hr Heat Input) [SCC]	NO _x ^b		CO	
	Emission Factor (lb/10 ⁶ scf)	Emission Factor Rating	Emission Factor (lb/10 ⁶ scf)	Emission Factor Rating
Large Wall-Fired Boilers (>100) [1-01-006-01, 1-02-006-01, 1-03-006-01]				
Uncontrolled (Pre-NSPS) ^c	280	A	84	B
Uncontrolled (Post-NSPS) ^c	190	A	84	B
Controlled - Low NO _x burners	140	A	84	B
Controlled - Flue gas recirculation	100	D	84	B
Small Boilers (<100) [1-01-006-02, 1-02-006-02, 1-03-006-02, 1-03-006-03]				
Uncontrolled	100	B	84	B
Controlled - Low NO _x burners	50	D	84	B
Controlled - Low NO _x burners/Flue gas recirculation	32	C	84	B
Tangential-Fired Boilers (All Sizes) [1-01-006-04]				
Uncontrolled	170	A	24	C
Controlled - Flue gas recirculation	76	D	98	D
Residential Furnaces (<0.3) [No SCC]				
Uncontrolled	94	B	40	B

^a Reference 11. Units are in pounds of pollutant per million standard cubic feet of natural gas fired. To convert from lb/10⁶ scf to kg/10⁶ m³, multiply by 16. Emission factors are based on an average natural gas higher heating value of 1,020 Btu/scf. To convert from lb/10⁶ scf to lb/MMBtu, divide by 1,020. The emission factors in this table may be converted to other natural gas heating values by multiplying the given emission factor by the ratio of the specified heating value to this average heating value. SCC = Source Classification Code. ND = no data. NA = not applicable.

^b Expressed as NO₂. For large and small wall fired boilers with SNCR control, apply a 24 percent reduction to the appropriate NO_x emission factor. For tangential-fired boilers with SNCR control, apply a 13 percent reduction to the appropriate NO_x emission factor.

^c NSPS=New Source Performance Standard as defined in 40 CFR 60 Subparts D and Db. Post-NSPS units are boilers with greater than 250 MMBtu/hr of heat input that commenced construction modification, or reconstruction after August 17, 1971, and units with heat input capacities between 100 and 250 MMBtu/hr that commenced construction modification, or reconstruction after June 19, 1984.

TABLE 1.4-2. EMISSION FACTORS FOR CRITERIA POLLUTANTS AND GREENHOUSE GASES FROM NATURAL GAS COMBUSTION^a

Pollutant	Emission Factor (lb/10 ⁶ scf)	Emission Factor Rating
CO ₂ ^b	120,000	A
Lead	0.0005	D
N ₂ O (Uncontrolled)	2.2	E
N ₂ O (Controlled-low-NO _x burner)	0.64	E
PM (Total) ^c	7.6	D
PM (Condensable) ^c	5.7	D
PM (Filterable) ^c	1.9	B
SO ₂ ^d	0.6	A
TOC	11	B
Methane	2.3	B
VOC	5.5	C

^a Reference 11. Units are in pounds of pollutant per million standard cubic feet of natural gas fired. Data are for all natural gas combustion sources. To convert from lb/10⁶ scf to kg/10⁶ m³, multiply by 16. To convert from lb/10⁶ scf to lb/MMBtu, divide by 1,020. The emission factors in this table may be converted to other natural gas heating values by multiplying the given emission factor by the ratio of the specified heating value to this average heating value. TOC = Total Organic Compounds.

VOC = Volatile Organic Compounds.

^b Based on approximately 100% conversion of fuel carbon to CO₂. CO₂[lb/10⁶ scf] = (3.67) (CON) (C)(D), where CON = fractional conversion of fuel carbon to CO₂, C = carbon content of fuel by weight (0.76), and D = density of fuel, 4.2x10⁴ lb/10⁶ scf.

^c All PM (total, condensable, and filterable) is assumed to be less than 1.0 micrometer in diameter. Therefore, the PM emission factors presented here may be used to estimate PM₁₀, PM_{2.5} or PM₁ emissions. Total PM is the sum of the filterable PM and condensable PM. Condensable PM is the particulate matter collected using EPA Method 202 (or equivalent). Filterable PM is the particulate matter collected on, or prior to, the filter of an EPA Method 5 (or equivalent) sampling train.

^d Based on 100% conversion of fuel sulfur to SO₂.

Assumes sulfur content is natural gas of 2,000 grains/10⁶ scf. The SO₂ emission factor in this table can be converted to other natural gas sulfur contents by multiplying the SO₂ emission factor by the ratio of the site-specific sulfur content (grains/10⁶ scf) to 2,000 grains/10⁶ scf.

loading operation, resulting in high levels of vapor generation and loss. If the turbulence is great enough, liquid droplets will be entrained in the vented vapors.

A second method of loading is submerged loading. Two types are the submerged fill pipe method and the bottom loading method. In the submerged fill pipe method, the fill pipe extends almost to the bottom of the cargo tank. In the bottom loading method, a permanent fill pipe is attached to the cargo tank bottom. During most of submerged loading by both methods, the fill pipe opening is below the liquid surface level. Liquid turbulence is controlled significantly during submerged loading, resulting in much lower vapor generation than encountered during splash loading.

The recent loading history of a cargo carrier is just as important a factor in loading losses as the method of loading. If the carrier has carried a nonvolatile liquid such as fuel oil, or has just been cleaned, it will contain vapor-free air. If it has just carried gasoline and has not been vented, the air in the carrier tank will contain volatile organic vapors, which will be expelled during the loading operation along with newly generated vapors.

Cargo carriers are sometimes designated to transport only one product, and in such cases are practicing "dedicated service". Dedicated gasoline cargo tanks return to a loading terminal containing air fully or partially saturated with vapor from the previous load. Cargo tanks may also be "switch loaded" with various products, so that a nonvolatile product being loaded may expel the vapors remaining from a previous load of a volatile product such as gasoline. These circumstances vary with the type of cargo tank and with the ownership of the carrier, the petroleum liquids being transported, geographic location, and season of the year.

One control measure for vapors displaced during liquid loading is called "vapor balance service", in which the cargo tank retrieves the vapors displaced during product unloading at bulk plants or service stations and transports the vapors back to the loading terminal. Figure 5.2-5 shows a tank truck in vapor balance service filling a service station underground tank and taking on displaced gasoline vapors for return to the terminal. A cargo tank returning to a bulk terminal in vapor balance service normally is saturated with organic vapors, and the presence of these vapors at the start of submerged loading of the tanker truck results in greater loading losses than encountered during nonvapor balance, or "normal", service. Vapor balance service is usually not practiced with marine vessels, although some vessels practice emission control by means of vapor transfer within their own cargo tanks during ballasting operations, discussed below.

Emissions from loading petroleum liquid can be estimated (with a probable error of ± 30 percent)⁴ using the following expression:

$$L_L = 12.46 \frac{SPM}{T} \quad (1)$$

where:

L_L = loading loss, pounds per 1000 gallons ($\text{lb}/10^3 \text{ gal}$) of liquid loaded

S = a saturation factor (see Table 5.2-1)

P = true vapor pressure of liquid loaded, pounds per square inch absolute (psia)
(see Section 7.1, "Organic Liquid Storage Tanks")

M = molecular weight of vapors, pounds per pound-mole ($\text{lb}/\text{lb-mole}$) (see Section 7.1, "Organic Liquid Storage Tanks")

T = temperature of bulk liquid loaded, $^{\circ}\text{R}$ ($^{\circ}\text{F} + 460$)

Endnotes Table II

- ¹ Factors give the total organic compound emission rate. Multiply by the weight percent of non-methane, non-ethane organics to get the VOC emission rate.
- ² These emission factors require the use of the 28MID fugitive program. Monitoring must occur at a leak definition of 500 ppmv. No additional control credit can be applied to these factors except 28CNTQ and 28CNTA. Emission factors are from EOIC Fugitive Emission Study, summer 1988.
- ³ These emission factors require the use of the 28MID fugitive program. Monitoring must occur at a leak definition of 50 ppmv. No additional control credit can be applied to these factors. Emission factors are from Phosgene Panel Study, summer 1988.
- ⁴ These emission factors require the use of the 28MID fugitive program. Monitoring must occur at a leak definition of 100 ppmv. No additional control credit can be applied to these factors. Emission factors are from Randall, J. L., et al., Radian Corporation. Fugitive Emissions from the 1,3-butadiene Production Industry: A Field Study. Final Report. Prepared for the 1,3-Butadiene Panel for the Chemical Manufacturers Association. April 1989.
- ⁵ Control credit is included in the factor; no additional control credit can be applied to these factors. Monthly 28 PET inspection is required.
- ⁶ Factors are taken from EPA Document EPA-453/R-95-017, November 1995, pages 2-13, 2-14, and 2-15.
- ⁷ Heavy liquid oil – Pump factor was not derived during the API study. The factor is the SOCMI without C₂ Heavy Liquid – Pump factor with a 93% reduction credit for the physical inspection.

Heptanes Plus	<u>2.897</u>	<u>1.203</u>
Totals	100.000	21.606

Computed Real Characteristics Of Heptanes Plus:

Specific Gravity -----	3.346	(Air=1)
Molecular Weight -----	95.39	
Gross Heating Value -----	5085	BTU/CF

Computed Real Characteristics Of Total Sample:

Specific Gravity -----	1.425	(Air=1)
Compressibility (Z) -----	0.9843	
Molecular Weight -----	40.62	
Gross Heating Value		
Dry Basis -----	2289	BTU/CF
Saturated Basis -----	2250	BTU/CF

*Hydrogen Sulfide tested in laboratory by: Stain Tube Method (GPA 2377)
Results: <0.013 Gr/100 CF, <0.2 PPMV or <0.001 Mol %

Base Conditions: 15.025 PSI & 60 Deg F

Sampled By: (16) Ronnie G.
Analyst: MR
Processor: NG
Cylinder ID: FL-11S

Certified: FESCO, Ltd. - Alice, Texas

David Dannhaus 361-661-7015

**CHROMATOGRAPH EXTENDED ANALYSIS - GPA 2286

Map(s)

A map such as a 7.5 minute topographic quadrangle showing the exact location of the source. The map shall also include the following:

The UTM or Longitudinal coordinate system on both axes	An indicator showing which direction is north
A minimum radius around the plant of 0.8km (0.5 miles)	Access and haul roads
Topographic features of the area	Facility property boundaries
The name of the map	The area which will be restricted to public access
A graphical scale	

A25000m E. A26000m E. A27000m E. A28000m E. A29000m E. WCE84 Zone 13R A31000m E.

Proof of Public Notice

(for NSR applications submitting under 20.2.72 or 20.2.74 NMAC)

(This proof is required by: 20.2.72.203.A.14 NMAC “Documentary Proof of applicant’s public notice”)

■ **I have read the AQB “Guidelines for Public Notification for Air Quality Permit Applications”**

This document provides detailed instructions about public notice requirements for various permitting actions. It also provides public notice examples and certification forms. Material mistakes in the public notice will require a re-notice before issuance of the permit.

Unless otherwise allowed elsewhere in this document, the following items document proof of the applicant’s Public Notification. Please include this page in your proof of public notice submittal with checkmarks indicating which documents are being submitted with the application.

New Permit and **Significant Permit Revision** public notices must include all items in this list.

Technical Revision public notices require only items 1, 5, 9, and 10.

Per the Guidelines for Public Notification document mentioned above, include:

1. ■ A copy of the certified letter receipts with post marks (20.2.72.203.B NMAC)
 2. ■ A list of the places where the public notice has been posted in at least four publicly accessible and conspicuous places, including the proposed or existing facility entrance. (e.g: post office, library, grocery, etc.)
 3. ■ A copy of the property tax record (20.2.72.203.B NMAC).
 4. ■ A sample of the letters sent to the owners of record.
 5. ■ A sample of the letters sent to counties, municipalities, and Indian tribes.
 6. ■ A sample of the public notice posted and a verification of the local postings.
 7. ■ A table of the noticed citizens, counties, municipalities and tribes and to whom the notices were sent in each group.
 8. ■ A copy of the public service announcement (PSA) sent to a local radio station and documentary proof of submittal.
 9. ■ A copy of the classified or legal ad including the page header (date and newspaper title) or its affidavit of publication stating the ad date, and a copy of the ad. When appropriate, this ad shall be printed in both English and Spanish.
 10. ■ A copy of the display ad including the page header (date and newspaper title) or its affidavit of publication stating the ad date, and a copy of the ad. When appropriate, this ad shall be printed in both English and Spanish.
 11. ■ A map with a graphic scale showing the facility boundary and the surrounding area in which owners of record were notified by mail. This is necessary for verification that the correct facility boundary was used in determining distance for notifying land owners of record.
-

(1) Notification of Property Owners within ½ miles of site include:

Carlsbad Field Office – Send by CERTIFIED MAIL
Bureau of Land Management
620 E. Greene St.
Carlsbad, NM 88220

(2) Notification of Municipalities, Counties, and Indian Tribes within 10 miles:

Mike Gallagher, Lea County Manager – Send by CERTIFIED MAIL
Lea County
100 North Main Ave., Suite 4
Lovington, NM, 88260
Phone: (575) 396-8601

Allen R. Davis, Eddy County Manager – Send by CERTIFIED MAIL
Eddy County
101 W Greene Street, Suite 110
Carlsbad, NM 88220
Phone: (575) 887-9511

(3) Notification in the Newspaper:

Hobbs News-Sun - Legal and Display Advertisement
<http://www.hobbsnews.com>
Phone: (575) 391-5417
Name: Kayla Montoya
Email: ter1@hobbsnews.com

Dear Bureau of Land Management:

Chevron U.S.A. Inc. announces its application submittal to the New Mexico Environment Department for an air quality permit for the modification of its central tank battery and compressor station, Salado Draw 23 CS and TB. The expected date of application submittal to the Air Quality Bureau is November 12, 2021.

The exact location for the proposed modifications to the facility known as, Salado Draw 23 Compressor Station and Tank Battery, is latitude 32 deg, 2 min, 10.2 sec and longitude -103 deg, 38 min, 44 sec. From Jal, NM intersection of S 3rd St. and NM-128W, head west on NM-128W for 29.77 mi. Turn left on Orla Rd./J-1 and continue for 12.64 miles. Turn left onto unnamed road and after 2.86 miles, the site will be on the left. The approximate location of this facility is 27.1 miles southwest of Jal, NM in Lea County.

In the proposed modification, gas analyses were updated, tank working and standing emissions calculations were updated and due to the updated gas analyses, the glycol dehydrator emissions estimation and the ProMax simulation were rerun with the updated values. This modification will not alter the site throughput of the site. After the modification, the site will consist of 4 compressor engines, 6 heaters, 2 dehydration units and associated condenser, reboiler, and glowplug, 3 condensate storage tanks, 4 water storage tanks, 1 flash gas compressor, 2 slop tanks, water truck loading, a flare, and a vapor recovery unit system with redundant capacity.

The estimated maximum quantities of any regulated air contaminants will be as follows in pound per hour (pph) and tons per year (tpy). These reported emissions could change slightly during the course of the Department's review:

Pollutant:	Pounds per hour	Tons per year
Total Suspended Particulates (TSP)	0.824	3.63
PM ₁₀	0.824	3.63
PM _{2.5}	0.824	3.63
Sulfur Dioxide (SO ₂)	3.57	15.62
Nitrogen Oxides (NO _x)	29.71	58.00
Carbon Monoxide (CO)	74.42	38.29
Volatile Organic Compounds (VOC)	728.94	125.74
Total sum of all Hazardous Air Pollutants (HAPs)	33.64	7.78
Hydrogen Sulfide (H ₂ S)	0.031	0.001
Green House Gas Emissions as Total CO ₂ e	N/A	<75,000

The standard and maximum operating schedules of the facility will be 24 hours per day, 7 days a week, and a maximum of 52 weeks per year.

Owners and operators of the facility include:

Chevron U.S.A. Inc.
Keaton Byars
HSE Specialist
6301 Deauville Blvd, N3203
Midland, TX 79706
(432) 687-7448

If you have any comments about the construction or operation of this facility, and you want your comments to be made as part of the permit review process, you must submit your comments in writing to this address: Permit Programs Manager; New Mexico Environment Department; Air Quality Bureau; 525 Camino de los Marquez, Suite 1; Santa Fe, New Mexico; 87505-1816; (505) 476-4300; 1 800 224-7009; https://www.env.nm.gov/aqb/permit/aqb_draft_permits.html. Other comments and questions may be submitted verbally.

Please refer to the company name and facility name, or send a copy of this notice along with your comments, since the Department may have not yet received the permit application. Please include a legible return mailing address with your comments. Once the Department has performed a preliminary review of the application and its air quality impacts, the Department's notice will be published in the legal section of a newspaper circulated near the facility location.

NOTICE

Chevron U.S.A. Inc. announces its application submittal to the New Mexico Environment Department for an air quality permit for the modification of its central tank battery and gas compression facility, Salado Draw 23 CS and TB. The expected date of application submittal to the Air Quality Bureau is November 12th, 2021.

The exact location for the proposed modifications to the facility known as, Salado Draw 23 Compressor Station and Tank Battery, is latitude 32 deg, 2 min, 10.2 sec and longitude -103 deg, 38 min, 44 sec. From Jal, NM intersection of S 3rd St. and NM-128W, head west on NM-128W for 29.77 mi. Turn left on Orla Rd./J-1 and continue for 12.64 miles. Turn left onto unnamed road and after 2.86 miles, the site will be on the left. The approximate location of this facility is 27.1 miles southwest of Jal, NM in Lea County.

In the proposed modification, gas analyses were updated, tank working and standing emissions calculations were updated and due to the updated gas analyses, the glycol dehydrator emissions estimation and the ProMax simulation were rerun with the updated values. This modification will not alter the site throughput of the site. After the modification, the site will consist of 4 compressor engines, 6 heaters, 2 dehydration units and associated condenser, reboiler, and glowplug, 3 condensate storage tanks, 4 water storage tanks, 1 flash gas compressor, 2 slop tanks, water truck loading, a flare, and a vapor recovery unit system with redundant capacity.

The estimated maximum quantities of any regulated air contaminants will be as follows in pound per hour (pph) and tons per year (tpy). These reported emissions could change slightly during the course of the Department’s review:

Pollutant:	Pounds per hour	Tons per year
Total Suspended Particulates (TSP)	0.824	3.63
PM 10	0.824	3.63
PM 2.5	0.824	3.63
Sulfur Dioxide (SO2)	3.57	15.62
Nitrogen Oxides (NOx)	29.71	58.00
Carbon Monoxide (CO)	74.42	38.29
Volatile Organic Compounds (VOC)	728.94	125.74
Total sum of all Hazardous Air Pollutants (HAPs)	33.64	7.78
Hydrogen Sulfide (H2S)	0.031	0.001
Green House Gas Emissions as Total CO2e	N/A	<75,000

The standard and maximum operating schedules of the facility will be 24 hours per day, 7 days a week, and a maximum of 52 weeks per year.

The owner and/or operator of the Facility is:

Chevron U.S.A. Inc.
Keaton Byars
HSE Specialist
6301 Deauville Blvd., N3203
Midland, TX 79706
(432) 687-7448

If you have any comments about the construction or operation of this facility, and you want your comments to be made as part of the permit review process, you must submit your comments in writing to this address: Permit Programs Manager; New Mexico Environment Department; Air Quality Bureau; 525 Camino de los Marquez, Suite 1; Santa Fe, New Mexico; 87505-1816; (505) 476-4300; 1 800 224-7009; https://www.env.nm.gov/aqb/permit/aqb_draft_permits.html. Other comments and questions may be submitted verbally.

Please refer to the company name and facility name, or send a copy of this notice along with your comments, since the Department may have not yet received the permit application. Please include a legible return mailing address with your comments. Once the Department has performed a preliminary review of the application and its air quality impacts, the Department’s notice will be published in the legal section of a newspaper circulated near the facility location.

Attn: Post Master

Waid Environmental recently contacted you to arrange the posting of a public notice for Chevron U.S.A. Inc. (enclosed). According to New Mexico air quality regulations, Chevron U.S.A. Inc. must announce its intent to apply to the New Mexico Environment Department for an air quality permit for the modification of a central tank battery and compressor station. One of the methods for notifying the public is the posting of Public Notices in publicly accessible and conspicuous places for public viewing.

This letter and notice has been sent by Federal Express so that we may document this was completed. Thank you for your help in notifying the public.

Please post the enclosed Public Notice in a publicly accessible and conspicuous place for public viewing.

Sincerely,

A handwritten signature in blue ink that reads "Justin K. Mechell".

Justin K. Mechell, P.E.
Senior Engineer

NOTICE OF AIR QUALITY PERMIT APPLICATION

Chevron U.S.A. Inc. announces its application submittal to the New Mexico Environment Department for an air quality permit for the modification of its central tank battery and gas compression facility, Salado Draw 23 CS and TB. The expected date of application submittal to the Air Quality Bureau is November 12th, 2021.

The exact location for the proposed modifications to the facility known as, Salado Draw 23 Compressor Station and Tank Battery, is latitude 32 deg, 2 min, 10.2 sec and longitude -103 deg, 38 min, 44 sec. From Jal, NM intersection of S 3rd St. and NM-128W, head west on NM-128W for 29.77 mi. Turn left on Orla Rd./J-1 and continue for 12.64 miles. Turn left onto unnamed road and after 2.86 miles, the site will be on the left. The approximate location of this facility is 27.1 miles southwest of Jal, NM in Lea County.

In the proposed modification, gas analyses were updated, tank working and standing emissions calculations were updated and due to the updated gas analyses, the glycol dehydrator emissions estimation and the ProMax simulation were rerun with the updated values. This modification will not alter the site throughput of the site. After the modification, the site will consist of 4 compressor engines, 6 heaters, 2 dehydration units and associated condenser, reboiler, and glowplug, 3 condensate storage tanks, 4 water storage tanks, 1 flash gas compressor, 2 slop tanks, water truck loading, a flare, and a vapor recovery unit system with redundant capacity.

The estimated maximum quantities of any regulated air contaminant for the entire site will be as follows in pound per hour (pph) and tons per year (tpy) and could change slightly during the course of the Department's review:

Pollutant:	Pounds per hour	Tons per year
Total Suspended Particulates (TSP)	0.824	3.63
PM ₁₀	0.824	3.63
PM _{2.5}	0.824	3.63
Sulfur Dioxide (SO ₂)	3.57	15.62
Nitrogen Oxides (NO _x)	29.71	58.00
Carbon Monoxide (CO)	74.42	38.29
Volatile Organic Compounds (VOC)	728.94	125.74
Total sum of all Hazardous Air Pollutants (HAPs)	33.64	7.78
Hydrogen Sulfide (H ₂ S)	0.031	0.001
Green House Gas Emissions as Total CO ₂ e	N/A	<75,000

The standard and maximum operating schedules of the facility will be 24 hours per day, 7 days a week, and a maximum of 52 weeks per year.

- 150 calls for service.
- Two accidents reported: without injury W. Bender Blvd. and N. Fowler St.; without injury E. Navajo Dr. And N. Dal Paso St.
- 14 criminal incidents: fraud 1300 block W. Joe Harvey Blvd.; criminal damage 2400 block N. Jefferson St.; stolen vehicle 800 block W. Bender Blvd.; fraud 1800 block N. Turner St.; subject on a bike W. Berry Dr. and N. Grimes St.; domestic 500 block E. Taos St.; breaking and entering 500 block E.

Lea St.; warrant service 1300 block E. Main St.; found property 3800 block N. Lovington Hwy.; warrant service N. Dal Paso St. and E. Sandcrest Dr.; trouble with subject 100 block E. Corbett St.; unwanted subject 3800 block N. Lovington Hwy.; warrant service E. Bender Blvd. and N. Dal Paso St.; warrant service 1000 block W. Taylor St.

Hobbs Police Department activity for 11-14-21

- 118 calls for service.
- One accident reported: without injury N. Fowler St. and E. Sanger St.
- 15 criminal incidents: suspicious E. Llano Dr. and N. Jefferson St.; warrant service E. Humble St. and S. Selman St.; warrant service 600 block W. Berry Dr.; domestic 5400 block N. Lovington Hwy.; structure fire 900 block N. Dalmont St.; aggravated battery 1300 block E. Marland St.; shoplifting 700 block N. Dal Paso St.; lost or stolen 1200 block N. Turner St.; trouble with subject 4800 block N. Lovington Hwy.; battery 100 block E. Corbett St.; auto burglary 1000 block E. Green Acres Dr.; domestic 500 block E. Snyder St.; warrant service 300 block E. Castle Ave.; abandoned vehicle N. Ave B and E Taylor St.; abandoned vehicle N. Lovington Hwy. and W. Gerry St.

Arrests

- 27 arrests
- 18 misdemeanors – two battery against a household member; unlawful use of a revoked license; fourteen failure to appear; failure to pay. 10 felony arrests.

Felony arrests:

- Martin Guevara, 40, of Hobbs, was arrested on Nov. 14 and charged with fugitive from justice and possession of a controlled substance, both fourth-degree felonies; and display of plates, proof of insurance and drivers must be licensed, all misdemeanors.
- Rubio Torres, 22, of Hobbs, was arrested on Nov. 13 and charged with failure to appear, a fourth-degree felony.
- Desmond Edward, 33, of Hobbs, was arrested on Nov. 14 and charged with aggravated battery against

a household member, a third-degree felony.

- Henry Land, 22, of Hobbs, was arrested on Nov. 13 and charged with breaking and entering, a fourth-degree felony.
- Valerie Diaz, 33, of Hobbs, was arrested on Nov. 13 and charged with breaking and entering, a fourth-degree felony.
- Marshay Dale, 36, of Hobbs, was arrested on Nov. 13 and charged with aggravated battery against a household member, a third-degree felony.
- Jason Underwood, 45, of Ninnekah, Oklahoma, was arrested on Nov. 13 and charged with failure to appear, a fourth-degree felony.
- Dustin Harper, 36, of Hobbs, was arrested on Nov. 13 and charged with possession of a controlled substance, a fourth-degree felony; and criminal trespass, a misdemeanor.
- Keeshon Cantu, 21, of Hobbs, was arrested on

Nov. 12 and charged with burglary of a dwelling, a third-degree felony.

- Frutoso Puente, 68, of Hobbs, was arrested on Nov. 12 and charged with criminal sexual penetration in the first degree, a first-degree felony.
- Lovington Police Department activity for 11-13-21 through 11-14-21**
- 92 calls for service.
 - One accident: without injury Commercial St. and Ave D
 - Six criminal incidents: warrant service 1400 block S. Commercial St.; unwanted subject 3500 block S. Main St.; warrant service 9th St and Ave R; stolen vehicle 1600 block W. Ave D; fraud 1000 block S. Main St.; trouble with subject 300 block W. Ave J.

Hobbs Accidents

Oct 9 – 7:39 p.m. at S. Dal Paso St.; drivers Kevin Adams, of Hobbs, and Lucia Ramon-Carrasco, of Odessa; Adams was cited for man-

datory proof of financial responsibility, DWI and following too close.

Oct. 17 – 5:00 p.m. at S. Morris; an unknown driver collided with a parked car; no citations were given.

Oct. 26 – 9:41 a.m. at N. McKinley Dr.; an unknown driver and Cecilia Diaz, of Hobbs; Diaz was cited for carless driving and display of plates.

Nov. 1 – 5:11 p.m. at Yeso Dr.; drivers Marie Wadsworth, of Hobbs, and Amanda Flores, of Hobbs; Wadsworth was cited for limitations on backing.

Nov. 3 – 10:05 a.m. at W. Rojo Dr.; drivers Victoria Macias, of Roswell, and Frutoso Puente, of Hobbs; Macias was cited for failure to yield from private drive.

Nov. 7 – 12:49 p.m. at N. Turner St.; drivers Kimberly Williams, of Hobbs, and Hector Gonzalez Perez, of Hobbs; Williams was cited for vehicle entering stop or yield sign and Cano was cited for seat belts.

On-site **FOOD TRUCKS:**
Baja Grill • Mama Es
Patio Pizza

NOTICE OF AIR QUALITY PERMIT APPLICATION

Chevron U.S.A. Inc. announces its application submittal to the New Mexico Environment Department for an air quality permit for the modification of its central tank battery and gas compression facility, Salado Draw 23 CS and TB. The expected date of application submittal to the Air Quality Bureau is November 12th, 2021.

The exact location for the proposed modifications to the facility known as, Salado Draw 23 Compressor Station and Tank Battery, is latitude 32 deg, 2 min, 10.2 sec and longitude -103 deg, 38 min, 44 sec. From Jal, NM intersection of S 3rd St. and NM-128W, head west on NM-128W for 29.77 mi. Turn left on Orla Rd./J-1 and continue for 12.64 miles. Turn left onto unnamed road and after 2.86 miles, the site will be on the left. The approximate location of this facility is 27.1 miles southwest of Jal, NM in Lea County.

In the proposed modification, gas analyses were updated, tank working and standing emissions calculations were updated and due to the updated gas analyses, the glycol dehydrator emissions estimation and the ProMax simulation were rerun with the updated values. This modification will not alter the site throughput of the site. After the modification, the site will consist of 4 compressor engines, 6 heaters, 2 dehydration units and associated condenser, reboiler, and glowplug, 3 condensate storage tanks, 4 water storage tanks, 1 flash gas compressor, 2 slop tanks, water truck loading, a flare, and a vapor recovery unit system with redundant capacity.

The estimated maximum quantities of any regulated air contaminant for the entire site will be as follows in pound per hour (pph) and tons per year (tpy) and could change slightly during the course of the Department’s review:

Pollutant:	Pounds per hour	Tons per year
Total Suspended Particulates (TSP)	0.824	3.63
PM ₁₀	0.824	3.63
PM _{2.5}	0.824	3.63
Sulfur Dioxide (SO ₂)	3.57	15.62
Nitrogen Oxides (NO _x)	29.71	58.00
Carbon Monoxide (CO)	74.42	38.29
Volatile Organic Compounds (VOC)	728.94	125.74
Total sum of all Hazardous Air Pollutants (HAPs)	33.64	7.78
Hydrogen Sulfide (H ₂ S)	0.031	0.001
Green House Gas Emissions as Total CO ₂ e	N/A	<75,000

The standard and maximum operating schedules of the facility will be 24 hours per day, 7 days a week, and a maximum of 52 weeks per year.

The owner and/or operator of the Facility is:

Chevron U.S.A. Inc.
Keaton Byars
HSE Specialist
6301 Deauville Blvd., N3203
Midland, TX 79706
(432) 687-7448

If you have any comments about the construction or operation of this facility, and you want your comments to be made as part of the permit review process, you must submit your comments in writing to this address: Permit Programs Manager; New Mexico Environment Department; Air Quality Bureau; 525 Camino de los Marquez, Suite 1; Santa Fe, New Mexico; 87505-1816; (505) 476-4300; 1 800 224-7009; https://www.env.nm.gov/aqb/permit/aqb_draft_permits.html. Other comments and questions may be submitted verbally.

Please refer to the company name and facility name, or send a copy of this notice along with your comments, since the Department may have not yet received the permit application. Please include a legible return mailing address with your comments. Once the Department has performed a preliminary review of the application and its air quality impacts, the Department’s notice will be published in the legal section of a newspaper circulated near the facility location.

General information about air quality and the permitting process can be found at the Air Quality Bureau’s web site. The regulation dealing with public participation in the permit review process is 20.2.72.206 NMAC. This regulation can be found in the “Permits” section of this web site.

Atención

Este es un aviso de la Agencia de Calidad de Aire del Departamento de Medio Ambiente de Nuevo México, acerca de las emisiones producidas por un establecimiento en esta área. Si usted desea información en español, por favor comunicarse con la oficina de Calidad de Aire al teléfono 505-476-5557.

Notice of Non-Discrimination

NMED does not discriminate on the basis of race, color, national origin, disability, age or sex in the administration of its programs or activities, as required by applicable laws and regulations. NMED is responsible for coordination of compliance efforts and receipt of inquiries concerning non-discrimination requirements implemented by 40 C.F.R. Part 7, including Title VI of the Civil Rights Act of 1964, as amended; Section 504 of the Rehabilitation Act of 1973; the Age Discrimination Act of 1975, Title IX of the Education Amendments of 1972, and Section 13 of the Federal Water Pollution Control Act Amendments of 1972. If you have any questions about this notice or any of NMED’s non-discrimination programs, policies or procedures, or if you believe that you have been discriminated against with respect to a NMED program or activity, you may contact: Kathryn Becker, Non-Discrimination Coordinator, NMED, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, NM 87502, (505) 827-2855, nd.coordinator@state.nm.us. You may also visit our website at https://www.env.nm.gov/non-employee-discrimination-complaint-page/ to learn how and where to file a complaint of discrimination. Coordinator identified above or visit our website at https://www.env.nm.gov/NMED/EJ/index.html to learn how and where to file a complaint of discrimination.

NOTICE OF AIR QUALITY PERMIT APPLICATION

Chevron U.S.A. Inc. announces its application submittal to the New Mexico Environment Department for an air quality permit for the modification of its central tank battery and compressor station, Salado Draw 19 CTB and CS. The expected date of application submittal to the Air Quality Bureau is November 12th, 2021.

The exact location for the proposed modifications to the facility, known as Salado Draw 19 CTB and CS, is at latitude 32 deg, 2 min, 5.7 sec and longitude -103 deg, 36 min, 59.2 sec. From Jal, NM intersection of S 3rd St and NM-128W, head west on NM-128W for 29.77 mi. Turn left on Orla Rd./J-1 and continue for 12.64 miles. Turn left onto an unnamed road and after 4.56 miles, the site will be on the left. The approximate location of this facility is 25.3 miles southwest of Jal, NM.

In the proposed modification, gas analyses were updated, tank working and standing emissions calculations were updated and due to the updated gas analyses, the glycol dehydrator emissions estimation and the ProMax simulation were rerun with the updated values. This modification will not alter the site throughput of the site. After the modification, the site will consist of 6 compressor engines, 3 heaters, 1 dehydration units and associated condenser, reboiler, and glowplug, 4 condensate storage tanks, 5 water storage tanks, 1 flash gas compressor, 1 slop tanks, water/slop truck loading, a flare, a single vapor recovery unit at the compressor station for the slop tank and a vapor recovery unit system with redundant capacity.

The estimated maximum quantities of any regulated air contaminants will be as follows in pound per hour (pph) and tons per year (tpy). These reported emissions could change slightly during the course of the Department’s review:

Pollutant:	Pounds per hour	Tons per year
Particulate Matter (PM)	0.924	4.07
PM ₁₀	0.924	4.07
PM _{2.5}	0.924	4.07
Sulfur Dioxide (SO ₂)	5.35	23.44
Nitrogen Oxides (NO _x)	68.45	73.70
Carbon Monoxide (CO)	216.17	46.61
Volatile Organic Compounds (VOC)	708.90	127.01
Total sum of all Hazardous Air Pollutants (HAPs)	32.83	11.29
Hydrogen Sulfide (H ₂ S)	0.025	0.006
Green House Gas Emissions as Total CO ₂ e	N/A	<75,000

The standard and maximum operating schedules of the facility will be 24 hours per day, 7 days a week, and a maximum of 52 weeks per year.

The owner and/or operator of the Facility is:

Chevron U.S.A. Inc.
Keaton Byars
HSE Specialist
6301 Deauville Blvd, N3203
Midland, TX 79706
(432) 687-7448

If you have any comments about the construction or operation of this facility, and you want your comments to be made as part of the permit review process, you must submit your comments in writing to this address: Permit Programs Manager; New Mexico Environment Department; Air Quality Bureau; 525 Camino de los Marquez, Suite 1; Santa Fe, New Mexico; 87505-1816; (505) 476-4300; 1 800 224-7009; https://www.env.nm.gov/aqb/permit/aqb_draft_permits.html. Other comments and questions may be submitted verbally.

Please refer to the company name and site name, or send a copy of this notice along with your comments, since the Department may have not yet received the permit application. Please include a legible return mailing address with your comments. Once the Department has performed a preliminary review of the application and its air quality impacts, the Department’s notice will be published in the legal section of a newspaper circulated near the facility location.

General information about air quality and the permitting process can be found at the Air Quality Bureau’s web site. The regulation dealing with public participation in the permit review process is 20.2.72.206 NMAC. This regulation can be found in the “Permits” section of this web site.

Atención

Este es un aviso de la oficina de Calidad del Aire del Departamento del Medio Ambiente de Nuevo México, acerca de las emisiones producidas por un establecimiento en esta área. Si usted desea información en español, por favor comuníquese con esa oficina al teléfono 505-476-5557.

Notice of Non-Discrimination

NMED does not discriminate on the basis of race, color, national origin, disability, age or sex in the administration of its programs or activities, as required by applicable laws and regulations. NMED is responsible for coordination of compliance efforts and receipt of inquiries concerning non-discrimination requirements implemented by 40 C.F.R. Part 7, including Title VI of the Civil Rights Act of 1964, as amended; Section 504 of the Rehabilitation Act of 1973; the Age Discrimination Act of 1975, Title IX of the Education Amendments of 1972, and Section 13 of the Federal Water Pollution Control Act Amendments of 1972. If you have any questions about this notice or any of NMED’s non-discrimination programs, policies or procedures, or if you believe that you have been discriminated against with respect to a NMED program or activity, you may contact: Kathryn Becker, Non-Discrimination Coordinator, NMED, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, NM 87502, (505) 827-2855, nd.coordinator@state.nm.us. You may also visit our website at https://www.env.nm.gov/non-employee-discrimination-complaint-page/ to learn how and where to file a complaint of discrimination.

Section 10

Written Description of the Routine Operations of the Facility

A written description of the routine operations of the facility. Include a description of how each piece of equipment will be operated, how controls will be used, and the fate of both the products and waste generated. For modifications and/or revisions, explain how the changes will affect the existing process. In a separate paragraph describe the major process bottlenecks that limit production. The purpose of this description is to provide sufficient information about plant operations for the permit writer to determine appropriate emission sources.

The Salado Draw 23 Compressor Station and Tank Battery is currently authorized under NSR Permit No. 6832-M7. In this revision application, gas analyses were updated, tank working and standing emissions calculations were updated and due to the updated gas analyses, the glycol dehydrator emissions estimation and the ProMax simulation were rerun with the updated values.

The Salado Draw 23 Compressor Station and Tank Battery is designed to remove water and hydrocarbon liquids from natural gas produced in the surrounding area, and to compress the gas into a pipeline for delivery to a processing plant. The site will include 4 compressor engines, 6 heaters, 1 dehydration unit and associated condenser, reboiler, and glowplug, flare, 3 condensate tanks, 4 water tanks, 2 slop tanks, 1 flash gas compressor, water truck loading, a flare and VRU system with redundant capacity.

Section 11

Source Determination

Source submitting under 20.2.70, 20.2.72, 20.2.73, and 20.2.74 NMAC

Sources applying for a construction permit, PSD permit, or operating permit shall evaluate surrounding and/or associated sources (including those sources directly connected to this source for business reasons) and complete this section. Responses to the following questions shall be consistent with the Air Quality Bureau's permitting guidance, Single Source Determination Guidance, which may be found on the Applications Page in the Permitting Section of the Air Quality Bureau website.

Typically, buildings, structures, installations, or facilities that have the same SIC code, that are under common ownership or control, and that are contiguous or adjacent constitute a single stationary source for 20.2.70, 20.2.72, 20.2.73, and 20.2.74 NMAC applicability purposes. Submission of your analysis of these factors in support of the responses below is optional, unless requested by NMED.

A. Identify the emission sources evaluated in this section (list and describe):

B. Apply the 3 criteria for determining a single source:

SIC Code: Surrounding or associated sources belong to the same 2-digit industrial grouping (2-digit SIC code) as this facility, OR surrounding or associated sources that belong to different 2-digit SIC codes are support facilities for this source.

☒ Yes ☐ No

Common Ownership or Control: Surrounding or associated sources are under common ownership or control as this source.

☒ Yes ☐ No

Contiguous or Adjacent: Surrounding or associated sources are contiguous or adjacent with this source.

☒ Yes ☐ No

C. Make a determination:

- ☒ The source, as described in this application, constitutes the entire source for 20.2.70, 20.2.72, 20.2.73, or 20.2.74 NMAC applicability purposes. If in "A" above you evaluated only the source that is the subject of this application, all "YES" boxes should be checked. If in "A" above you evaluated other sources as well, you must check **AT LEAST ONE** of the boxes "NO" to conclude that the source, as described in the application, is the entire source for 20.2.70, 20.2.72, 20.2.73, and 20.2.74 NMAC applicability purposes.
- ☐ The source, as described in this application, **does not** constitute the entire source for 20.2.70, 20.2.72, 20.2.73, or 20.2.74 NMAC applicability purposes (A permit may be issued for a portion of a source). The entire source consists of the following facilities or emissions sources (list and describe):

Section 12

Section 12.A

PSD Applicability Determination for All Sources

(Submitting under 20.2.72, 20.2.74 NMAC)

A PSD applicability determination for all sources. For sources applying for a significant permit revision, apply the applicable requirements of 20.2.74.AG and 20.2.74.200 NMAC and to determine whether this facility is a major or minor PSD source, and whether this modification is a major or a minor PSD modification. It may be helpful to refer to the procedures for Determining the Net Emissions Change at a Source as specified by Table A-5 (Page A.45) of the EPA New Source Review Workshop Manual to determine if the revision is subject to PSD review.

A. This facility is:

- ☒ a minor PSD source before and after this modification (if so, delete C and D below).
- ☐ a major PSD source before this modification. This modification will make this a PSD minor source.
- ☐ an existing PSD Major Source that has never had a major modification requiring a BACT analysis.
- ☐ an existing PSD Major Source that has had a major modification requiring a BACT analysis
- ☐ a new PSD Major Source after this modification.

B. This facility **is not** one of the listed 20.2.74.501 Table I – PSD Source Categories. The “project” emissions for this modification are **not significant because they remain within the emission limits designated below**. The “project” emissions listed below **or** only result from changes described in this permit application, thus no emissions from other **revisions or modifications, past or future** to this facility. Also, specifically discuss whether this project results in “de-bottlenecking”, or other associated emissions resulting in higher emissions. The project emissions (before netting) for this project are as follows [see Table 2 in 20.2.74.502 NMAC for a complete list of significance levels]:

- a. NOx: **<100** TPY
- b. CO: **<100** TPY
- c. VOC: **<100** TPY
- d. SOx: **<100** TPY
- e. PM: **<100** TPY
- f. PM10: **<100** TPY
- g. PM2.5: **<100** TPY
- h. Fluorides: **0** TPY
- i. Lead: **0** TPY
- j. Sulfur compounds (listed in Table 2): **<100** TPY
- k. GHG: **<75,000** TPY

C. Netting **is not required (project is not significant)**.

D. BACT is **not required for this modification, as this application is a minor modification**.

E. If this is an existing PSD major source, or any facility with emissions greater than 250 TPY (or 100 TPY for 20.2.74.501 Table I – PSD Source Categories), determine whether any permit modifications are related, or could be considered a single project with this action, and provide an explanation for your determination whether a PSD modification is triggered.

Section 13

Determination of State & Federal Air Quality Regulations

This section lists each state and federal air quality regulation that may apply to your facility and/or equipment that are stationary sources of regulated air pollutants.

Not all state and federal air quality regulations are included in this list. Go to the Code of Federal Regulations (CFR) or to the Air Quality Bureau's regulation page to see the full set of air quality regulations.

Required Information for Specific Equipment:

For regulations that apply to specific source types, in the 'Justification' column **provide any information needed to determine if the regulation does or does not apply. For example**, to determine if emissions standards at 40 CFR 60, Subpart IIII apply to your three identical stationary engines, we need to know the construction date as defined in that regulation; the manufacturer date; the date of reconstruction or modification, if any; if they are or are not fire pump engines; if they are or are not emergency engines as defined in that regulation; their site ratings; and the cylinder displacement.

Required Information for Regulations that Apply to the Entire Facility:

See instructions in the 'Justification' column for the information that is needed to determine if an 'Entire Facility' type of regulation applies (e.g. 20.2.70 or 20.2.73 NMAC).

Regulatory Citations for Regulations That Do Not, but Could Apply:

If there is a state or federal air quality regulation that does not apply, but you have a piece of equipment in a source category for which a regulation has been promulgated, you must **provide the low level regulatory citation showing why your piece of equipment is not subject to or exempt from the regulation. For example** if you have a stationary internal combustion engine that is not subject to 40 CFR 63, Subpart ZZZZ because it is an existing 2 stroke lean burn stationary RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, your citation would be 40 CFR 63.6590(b)(3)(i). **We don't want a discussion of every non-applicable regulation, but if it is possible a regulation could apply, explain why it does not. For example**, if your facility is a power plant, you do not need to include a citation to show that 40 CFR 60, Subpart OOO does not apply to your non-existent rock crusher.

Regulatory Citations for Emission Standards:

For each unit that is subject to an emission standard in a source specific regulation, such as 40 CFR 60, Subpart OOO or 40 CFR 63, Subpart HH, include the low level regulatory citation of that emission standard. Emission standards can be numerical emission limits, work practice standards, or other requirements such as maintenance. **Here are examples:** a glycol dehydrator is subject to the general standards at 63.764C(1)(i) through (iii); an engine is subject to 63.6601, Tables 2a and 2b; a crusher is subject to 60.672(b), Table 3 and all transfer points are subject to 60.672(e)(1)

Federally Enforceable Conditions:

All federal regulations are federally enforceable. All Air Quality Bureau State regulations are federally enforceable except for the following: affirmative defense portions at 20.2.7.6.B, 20.2.7.110(B)(15), 20.2.7.11 through 20.2.7.113, 20.2.7.115, and 20.2.7.116; 20.2.37; 20.2.42; 20.2.43; 20.2.62; 20.2.63; 20.2.86; 20.2.89; and 20.2.90 NMAC. Federally enforceable means that EPA can enforce the regulation as well as the Air Quality Bureau and federally enforceable regulations can count toward determining a facility's potential to emit (PTE) for the Title V, PSD, and nonattainment permit regulations.

INCLUDE ANY OTHER INFORMATION NEEDED TO COMPLETE AN APPLICABILITY DETERMINATION OR THAT IS RELEVANT TO YOUR FACILITY'S NOTICE OF INTENT OR PERMIT.

EPA Applicability Determination Index for 40 CFR 60, 61, 63, etc.: <http://cfpub.epa.gov/adi/>

Table for STATE REGULATIONS:

<u>STATE REGU- LATIONS</u> CITATION	Title	Applies ? Enter Yes or No	Unit(s) or Facility	JUSTIFICATION: (You may delete instructions or statements that do not apply in the justification column to shorten the document.)
20.2.1 NMAC	General Provisions	Yes	Facility	Chevron U.S.A. Inc. will comply with the requirements of 20.2.1 NMAC.
20.2.3 NMAC	Ambient Air Quality Standards NMAAQs	Yes	Facility	NMAAQs is applicable. The enclosed air dispersion modeling demonstrates compliance with the NMAAQs.
20.2.7 NMAC	Excess Emissions	Yes	Facility	Chevron U.S.A. Inc. will comply with the requirements of 20.2.7 NMAC, in the event of excess emissions.
20.2.23 NMAC	Fugitive Dust Control	No	N/A	Does not apply. This application is not for a Notice of Intent (NOI).
20.2.33 NMAC	Gas Burning Equipment - Nitrogen Dioxide	No	N/A	None of the sources are affected because they each have a heat input of less than 1,000,000 million BTU per year.
20.2.35 NMAC	Natural Gas Processing Plant – Sulfur	No	N/A	Does not apply. The facility is not a natural gas processing plant.
20.2.37 and 20.2.36 NMAC	Petroleum Processing Facilities and Petroleum Refineries	No	N/A	Does not apply. The facility is not a petroleum refinery or natural gas processing plant.
<u>20.2.38</u> NMAC	Hydrocarbon Storage Facility	Yes	See below	Chevron U.S.A. Inc. will comply with the applicable parts of 20.2.38 NMAC.
20.2.38.109	Tank Storage Associated with Petroleum Production or Processing Facility	No	N/A	Does not apply. All storage tanks have a capacity less than 20,000 gallons.
20.2.38.110	Tank Battery or Storage Facility – Within Municipality	No	N/A	Does not apply. The facility is not located within the corporate limits of any municipality.
20.2.38.111	Tank Battery or Storage Facility – Within Five Miles of Municipality of Twenty Thousand or More	No	N/A	Does not apply. The facility is not located within five miles of any municipality with a population of twenty thousand or more.
20.2.38.112	New Tank Battery – More than 65,000 Gallons Capacity	Yes	Applies to TK-1, TK-2, TK-3, TK-S2 Does not apply to PW-1, PW-2, PW-3, PW-4, TK-S1	The condensate storage tanks and condensate slop tank emissions are reduced by the VRU system with redundant capacity and meet control requirements. There are no requirements for the water storage tanks or slop tanks.
20.2.38.113	New Tank Battery and the Pecos-Permian Interstate	No	N/A	Does not apply. The facility is located within the Pecos-Permian Interstate Air Quality Control Region.

<u>STATE REGU- LATIONS CITATION</u>	Title	Applies ? Enter Yes or No	Unit(s) or Facility	JUSTIFICATION: (You may delete instructions or statements that do not apply in the justification column to shorten the document.)
	Air Quality Control Region			
20.2.61.109 NMAC	Smoke & Visible Emissions		ENG-1, ENG-2, ENG-3, ENG-4, HTR-1, HTR-2, HTR-3, HTR-4, HTR-5, HTR-6, REB-1, FLARE	Chevron U.S.A. Inc. does not expect visible emissions from the gas-fired heaters, reboiler, flare, or engines to exceed an opacity of 20%.
20.2.70 NMAC	Operating Permits	No	N/A	Does not apply. The site is not a major source and is not part of any other source category subject to this regulation.
20.2.71 NMAC	Operating Permit Fees	No	N/A	Does not apply. The site is not subject to 20.2.70 NMAC.
20.2.72 NMAC	Construction Permits	Yes	Facility	Chevron U.S.A. Inc. is applying for a construction permit for the Salado Draw 23 Compressor Station and Tank Battery because potential emission rates for several pollutants are greater than 10 pounds per hour and 25 tons per year.
20.2.73 NMAC	NOI & Emissions Inventory Requirements	Yes	Facility	An emissions inventory report will be submitted upon request by NMED.
20.2.75 NMAC	Construction Permit Fees	Yes	Facility	A filing fee of \$500 is being submitted according to 20.2.75.10.A NMAC. The filing fee will be applied to the total permit fee determined from 20.2.75.11 NMAC.
20.2.77 NMAC	New Source Performance	Yes	NSPS JJJJ applies to ENG-1, ENG-2, ENG-3, ENG-4, NSPS OOOOa applies to FUG NSPS OOOO/O OOOa does not apply to TK-1, TK-2, TK-3, PW-1, PW-2, PW-3, PW-4, TK-S1, TK-S2	Chevron U.S.A. Inc. will comply with the applicable requirements by complying with NSPS JJJJ, NSPS OOOO, and NSPS OOOOa.

<u>STATE REGU- LATIONS</u> CITATION	Title	Applies ? Enter Yes or No	Unit(s) or Facility	JUSTIFICATION: (You may delete instructions or statements that do not apply in the justification column to shorten the document.)
20.2.78 NMAC	Emission Standards for HAPS	No	N/A	Does not apply. There are no applicable NESHAP standards.
20.2.82 NMAC	MACT Standards for source categories of HAPS	Yes	ENG-1, ENG-2, ENG-3 ENG-4, DHY-1	Chevron U.S.A. Inc. will comply with the applicable requirements by complying with MACT HH and ZZZZ.

Example of a Table for Applicable FEDERAL REGULATIONS (Note: This is not an exhaustive list):

<u>FEDERAL REGU- LATIONS</u> CITATION	Title	Applies? Enter Yes or No	Unit(s) or Facility	JUSTIFICATION
40 CFR 50	NAAQS	Yes	Facility	NAAQS is applicable. The enclosed air dispersion modeling demonstrates compliance with the NAAQS.
NSPS 40 CFR 60, Subpart A	General Provisions	Yes	Applies to: ENG-1, ENG-2, ENG-3, ENG-4, FUG Exempt: TK-1, TK-2, TK-3, PW-1, PW-2, PW-3, PW-4, TK-S1, TK-S2	Chevron U.S.A. Inc. will comply with the applicable general provisions of Subpart A.
NSPS 40 CFR 60, Subpart Kb	Standards of Performance for Volatile Organic Liquid Storage Vessels (Including Petroleum Liquid Storage Vessels) for Which Construction, Reconstruction, or Modification Commenced After July 23, 1984	No	N/A	The storage vessels are not subject to NSPS 40 CFR 60, Subpart Kb because each has a capacity less than 10,000 bbl and is located prior to custody transfer.

<u>FEDERAL REGU- LATIONS CITATION</u>	Title	Applies? Enter Yes or No	Unit(s) or Facility	JUSTIFICATION
NSPS 40 CFR Part 60 Subpart OOOO	Standards of Performance for Crude Oil and Natural Gas Production, Transmission, and Distribution for which construction, modification or reconstruction commenced after August 23, 2011 and before September 18, 2015	No	Exempt: TK-1, TK-2, TK-3, PW-1, PW-2, PW-3, PW-4, TK-S1, TK-S2	NSPS OOOO does not apply to the storage tanks because they were constructed after 09/18/15.
NSPS 40 CFR Part 60 Subpart OOOOa	Standards of Performance for Crude Oil and Natural Gas Facilities for which Construction, Modification or Reconstruction Commenced After September 18, 2015	Yes	Applies to ENG-1, ENG-2, ENG-3, ENG-4, FUG Does not apply to TK-1, TK- 2, TK-3, PW-1, PW- 2, PW-3, PW-4, TK- S1, TK-S2	The site is subject to NSPS OOOOa. Specifically, the collection of fugitive emission components and the reciprocating compressors are NSPS OOOOa affected facilities. The storage vessels are not NSPS OOOOa affected facilities since the PTE from each storage vessel is less than 6 tpy. Any pneumatic pumps are not affected facilities since they will not be gas driven.
NSPS 40 CFR Part 60 Subpart JJJJ	Standards of Performance for Stationary Spark Ignition Internal Combustion Engines	Yes	ENG-1, ENG-2, ENG-3, ENG-4,	NSPS JJJJ is an applicable standard to the engines. Chevron U.S.A. Inc. will comply with the applicable provision of Subpart JJJJ.
NESHAP 40 CFR 61 Subpart A	General Provisions	No	N/A	There are no applicable NESHAP standards.
MACT 40 CFR 63, Subpart A	General Provisions	Yes	ENG-1, ENG-2, ENG-3, ENG-4, DHY-1	Chevron U.S.A. Inc. will comply with the applicable general provisions of Subpart A. This subpart applies because MACT HH and ZZZZ apply.
MACT 40 CFR 63.760 Subpart HH	Oil and Natural Gas Production Facilities	Yes	DHY-1	The dehydrator meets the requirements of MACT HH by emitting < 1 tpy benzene.
MACT 40 CFR 63 Subpart ZZZZ	National Emissions Standards for Hazardous Air Pollutants for Stationary Reciprocating Internal Combustion Engines (RICE MACT)	Yes	ENG-1, ENG-2, ENG-3, ENG-4	Each engine meets the requirements of MACT ZZZZ by complying with NSPS JJJJ, per 63.6590(c)(1).

Section 14

Operational Plan to Mitigate Emissions

(Submitting under 20.2.70, 20.2.72, 20.2.74 NMAC)

-
- ☐ **Title V Sources** (20.2.70 NMAC): By checking this box and certifying this application the permittee certifies that it has developed an **Operational Plan to Mitigate Emissions During Startups, Shutdowns, and Emergencies** defining the measures to be taken to mitigate source emissions during startups, shutdowns, and emergencies as required by 20.2.70.300.D.5(f) and (g) NMAC. This plan shall be kept on site to be made available to the Department upon request. This plan should not be submitted with this application.
- **NSR** (20.2.72 NMAC), **PSD** (20.2.74 NMAC) & **Nonattainment** (20.2.79 NMAC) **Sources:** By checking this box and certifying this application the permittee certifies that it has developed an **Operational Plan to Mitigate Source Emissions During Malfunction, Startup, or Shutdown** defining the measures to be taken to mitigate source emissions during malfunction, startup, or shutdown as required by 20.2.72.203.A.5 NMAC. This plan shall be kept on site to be made available to the Department upon request. This plan should not be submitted with this application.
- **Title V** (20.2.70 NMAC), **NSR** (20.2.72 NMAC), **PSD** (20.2.74 NMAC) & **Nonattainment** (20.2.79 NMAC) **Sources:** By checking this box and certifying this application the permittee certifies that it has established and implemented a Plan to Minimize Emissions During Routine or Predictable Startup, Shutdown, and Scheduled Maintenance through work practice standards and good air pollution control practices as required by 20.2.7.14.A and B NMAC. This plan shall be kept on site or at the nearest field office to be made available to the Department upon request. This plan should not be submitted with this application.
-

Chevron U.S.A. Inc. has developed an Operational plan to mitigate source emissions during malfunction, startup, or shutdown defining the measures to be taken to mitigate source emissions during malfunction, startup, or shutdown as required by 20.2.72.203.A.5. Chevron U.S.A. Inc. has also established and implemented a plan to minimize emissions during routine or predictable startup, shutdown, and scheduled maintenance through work practice standards and good air pollution control practices as required by 20.2.7.14.A and B NMAC.

The plan(s) will be kept on site or at the nearest field office to be made available to the Department upon request.

Section 15

Alternative Operating Scenarios

(Submitting under 20.2.70, 20.2.72, 20.2.74 NMAC)

Alternative Operating Scenarios: Provide all information required by the department to define alternative operating scenarios. This includes process, material and product changes; facility emissions information; air pollution control equipment requirements; any applicable requirements; monitoring, recordkeeping, and reporting requirements; and compliance certification requirements. Please ensure applicable Tables in this application are clearly marked to show alternative operating scenario.

Construction Scenarios: When a permit is modified authorizing new construction to an existing facility, NMED includes a condition to clearly address which permit condition(s) (from the previous permit and the new permit) govern during the interval between the date of issuance of the modification permit and the completion of construction of the modification(s). There are many possible variables that need to be addressed such as: Is simultaneous operation of the old and new units permitted and, if so for example, for how long and under what restraints? In general, these types of requirements will be addressed in Section A100 of the permit, but additional requirements may be added elsewhere. Look in A100 of our NSR and/or TV permit template for sample language dealing with these requirements. Find these permit templates at: https://www.env.nm.gov/aqb/permit/aqb_pol.html. Compliance with standards must be maintained during construction, which should not usually be a problem unless simultaneous operation of old and new equipment is requested.

In this section, under the bolded title “Construction Scenarios”, specify any information necessary to write these conditions, such as: conservative-realistic estimated time for completion of construction of the various units, whether simultaneous operation of old and new units is being requested (and, if so, modeled), whether the old units will be removed or decommissioned, any PSD ramifications, any temporary limits requested during phased construction, whether any increase in emissions is being requested as SSM emissions or will instead be handled as a separate Construction Scenario (with corresponding emission limits and conditions, etc).

Normally, flare emissions are from pilot/sweep gas combustion. During SSM activities, flaring of up to 89,000 scf/hr may occur.

Section 16

Air Dispersion Modeling

- 1) Minor Source Construction (20.2.72 NMAC) and Prevention of Significant Deterioration (PSD) (20.2.74 NMAC) ambient impact analysis (modeling): Provide an ambient impact analysis as required at 20.2.72.203.A(4) and/or 20.2.74.303 NMAC and as outlined in the Air Quality Bureau's Dispersion Modeling Guidelines found on the Planning Section's modeling website. If air dispersion modeling has been waived for one or more pollutants, attach the AQB Modeling Section modeling waiver approval documentation.
- 2) SSM Modeling: Applicants must conduct dispersion modeling for the total short term emissions during routine or predictable startup, shutdown, or maintenance (SSM) using realistic worst case scenarios following guidance from the Air Quality Bureau's dispersion modeling section. Refer to "Guidance for Submittal of Startup, Shutdown, Maintenance Emissions in Permit Applications (http://www.env.nm.gov/aqb/permit/app_form.html) for more detailed instructions on SSM emissions modeling requirements.
- 3) Title V (20.2.70 NMAC) ambient impact analysis: Title V applications must specify the construction permit and/or Title V Permit number(s) for which air quality dispersion modeling was last approved. Facilities that have only a Title V permit, such as landfills and air curtain incinerators, are subject to the same modeling required for preconstruction permits required by 20.2.72 and 20.2.74 NMAC.

What is the purpose of this application?	Enter an X for each purpose that applies
New PSD major source or PSD major modification (20.2.74 NMAC). See #1 above.	
New Minor Source or significant permit revision under 20.2.72 NMAC (20.2.72.219.D NMAC). See #1 above. Note: Neither modeling nor a modeling waiver is required for VOC emissions.	
Reporting existing pollutants that were not previously reported.	
Reporting existing pollutants where the ambient impact is being addressed for the first time.	
Title V application (new, renewal, significant, or minor modification. 20.2.70 NMAC). See #3 above.	
Relocation (20.2.72.202.B.4 or 72.202.D.3.c NMAC)	
Minor Source Technical Permit Revision 20.2.72.219.B.1.d.vi NMAC for like-kind unit replacements.	
Other: i.e. SSM modeling. See #2 above.	
This application does not require modeling since this is a No Permit Required (NPR) application.	
This application does not require modeling since this is a Notice of Intent (NOI) application (20.2.73 NMAC).	
This application does not require modeling according to 20.2.70.7.E(11), 20.2.72.203.A(4), 20.2.74.303, 20.2.79.109.D NMAC and in accordance with the Air Quality Bureau's Modeling Guidelines.	X

Check each box that applies:

- ☐ See attached, approved modeling **waiver for all** pollutants from the facility.
- ☐ See attached, approved modeling **waiver for some** pollutants from the facility.
- ☐ Attached in Universal Application Form 4 (UA4) is a **modeling report for all** pollutants from the facility.
- ☐ Attached in UA4 is a **modeling report for some** pollutants from the facility.
- ☒ No modeling is required.

Section 17

Compliance Test History

(Submitting under 20.2.70, 20.2.72, 20.2.74 NMAC)

To show compliance with existing NSR permits conditions, you must submit a compliance test history. The table below provides an example.

Compliance Test History Table

ENG-1 is EngineID-1957

ENG-2 is EngineID-1965

InventoryLookup	Notification Submittal Date	Report Submitted Date	Test Completed Date	Test Status
EngineID-1957	12/1/2021	1/25/2022	1/3/2022	Complete
EngineID-1965	12/1/2021	1/25/2022	1/3/2022	Complete
EngineID-1957	2/3/2022		4/4/2022	Pending Testing
EngineID-1965	2/3/2022		4/4/2022	Pending Testing
EngineID-1957	12/3/2020	2/4/2021	1/6/2021	Complete
EngineID-1965	12/3/2020	2/4/2021	1/6/2021	Complete
EngineID-1957	6/21/2021	10/27/2021	10/4/2021	Complete
EngineID-1965	6/28/2021	10/27/2021	10/4/2021	Complete
EngineID-1957	5/27/2021	9/1/2021	7/28/2021	Complete
EngineID-1965	5/27/2021	9/1/2021	7/28/2021	Complete
EngineID-1957	3/4/2021	5/3/2021	4/7/2021	Complete
EngineID-1965	3/4/2021	5/3/2021	4/7/2021	Complete
EngineID-1965	9/16/2020	11/12/2020	10/19/2020	Complete
EngineID-1957	9/16/2020	11/12/2020	10/19/2020	Complete
EngineID-1957	6/23/2020	8/27/2020	7/28/2020	Complete
EngineID-1965	6/23/2020	9/12/2020	8/12/2020	Complete

Section 20

Other Relevant Information

Other relevant information. Use this attachment to clarify any part in the application that you think needs explaining. Reference the section, table, column, and/or field. Include any additional text, tables, calculations or clarifying information.

Additionally, the applicant may propose specific permit language for AQB consideration. In the case of a revision to an existing permit, the applicant should provide the old language and the new language in track changes format to highlight the proposed changes. If proposing language for a new facility or language for a new unit, submit the proposed operating condition(s), along with the associated monitoring, recordkeeping, and reporting conditions. In either case, please limit the proposed language to the affected portion of the permit.

No additional information is included.

Section 22: Certification

Company Name: Chevron U.S.A. Inc.

I, Keaton Byars, hereby certify that the information and data submitted in this application are true and as accurate as possible, to the best of my knowledge and professional expertise and experience.

Signed this 12 day of November, 2021, upon my oath or affirmation, before a notary of the State of

TEXAS.
