General Construction Permit (GCP-2) Multi-Form for Quarrying, Crushing, and Screening Facilities

(Locating outside of Bernalillo County and Tribal Communities)

Use this form for any combination of the following permitting activities: **Initial registration** of a facility for a GCP-2 permit, GCP-2 facility **relocations**, GCP-2 **substitution of equipment** notification, and reporting of **additional equipment** for GCP-2 facilities.

Acknowledgements (Mark all that apply):

- I am submitting this form for an **initial** GCP-2 registration.
- I am submitting this form for **relocation**. A **complete** form is required for all relocations, including the equipment list.
- I am submitting this form for **equipment substitutions, removals, or additions**. Sections I, VII, VIII, and Attachment #1 are required in addition to the Certification Form (Section XI). Applicable provisions of the GCP-2 may require compliance tests for equipment installed following this notification. Include other sections if information is changing that should be reported in those sections.
- I acknowledged that a pre-application meeting is available to me upon request.
- I have sent a copy of this application to the nearest Department Field Office (required for initial registrations only).
- Public notice was posted prior to submitting this form to NMED.
- I have **published** the public notice required by Condition II.B.1 of GCP-2 (required for **initial** registrations only).
- This facility qualifies to receive assistance from the Small Business Environmental Assistance program (SBEAP) and qualifies for 50% of the current application and permit fees. To see if you qualify for SBEAP assistance and a fee reduction go to www.env.nm.gov/air-quality/small-biz-eap-2/.
- This facility qualifies to receive assistance from the Small Business Environmental Assistance Program (SBEAP) but **does not qualify** for 50% of the current application and permit fees.
- I have enclosed a check for the required fee:

| Registration Fees | Initial Registration | Relocation | Small Business* Initial Registration | Small Business* Relocation |
|--------------------|----------------------|------------|--------------------------------------|----------------------------|
| Beginning 1/1/2023 | \$4,920 | \$492 | \$2,460 | \$246 |
| Beginning 1/1/2024 | \$5,100 | \$510 | \$2,550 | \$255 |

There is an annual fee in addition to the registration fee: www.env.nm.gov/air-quality/permit-fees-2/.

* For facilities qualifying as a "small business" under 20.2.75.7.F NMAC the reduced fee may be used if NMED has a Small Business Certification Form from your company on file: www.env.nm.gov/forms/.

Provide your Check Number: **1002** and Amount: **\$2,550**

| | | | | | | | |
|---|---|----|----------|---|---|------|-----------|
| 1 | Maximum proposed production | 30 | tons/hr. | 3 | Total miles of haul road (one way) | 0.32 | miles |
| 2 | Area of storage pile & operations | 20 | Acres | 4 | Estimated Number of Haul truck trips per day (round trip) | 12 | trips/day |
| 5 | a) Restricted Area: Provide a written description of the method(s) to be used to restrict public access to the restricted area. Method(s) used to delineate the Restricted Area: The Restricted Area is fully fenced within a very large private property, which is also fully fenced. There is no public access road into the private property or the Restricted Area. Restricted Area is an area to which public entry is effectively precluded. Effective barriers include continuous fencing, continuous walls, or other continuous barriers approved by the Department on a case by case basis, such as rugged physical terrain with steep grade that would require special equipment to traverse. If a very large property is completely enclosed by fencing, a restricted area within the property may be identified with single wire fencing or signage only if approved by the Department. Public roads cannot be part of a Restricted Area. | | | | | | |
| 6 | Describe the control measures that will be used on haul roads to meet the fugitive emission requirements described in Section III.F. of this General Construction Permit: The GCP-2 permit Table III.F.1 (p. 11) Fugitive Emissions Control Requirements for Haul Road for this facility layout are: <input checked="" type="checkbox"/> Water <input type="checkbox"/> Water plus base course application <input type="checkbox"/> Surfactant application according to the manufacturer's instructions <input type="checkbox"/> Paved and sweeping | | | | | | |
| 7 | <input checked="" type="checkbox"/> During Malfunctions, Startup, Shutdown, and Scheduled Maintenances and weather exceedances the plant will shut down until it can operate without exceedances. Either check the option above or provide a preliminary operational plan(s) defining the measures to mitigate source emissions during: 1) Facility malfunctions, start up, shutdown, scheduled maintenance as defined in 20.2.7 NMAC AND 2) weather conditions that would cause an exceedance of the visible emission requirement in Section III.A.6. of the permit. | | | | | | |

Small Business Certification
(for reduced fees only)

I hereby certify that this company qualifies as a small business under 20.2.75.7.F NMAC, which states:

"small business" means, for the purposes of this Part, a company that employs no more than ten (10) employees* at any time during the calendar year. Employees include part-time, temporary, or limited service workers. For new sources, the responsible company official shall certify that the source does not expect to employ any more than ten (10) employees in the first year of operations. In addition, "small business" does not include (1) any source which may emit more than fifty (50) tons per year of any regulated air contaminant for which there is a national or New Mexico ambient air quality standard, or seventy-five (75) tons per year of all regulated air contaminants for which there are national or New Mexico ambient air quality standards; and (2) any major source for hazardous air pollutants under 20.2.70 NMAC.

For facilities that have a General Construction Permit (GCP), the following production and/or engine capacity limits represent the amounts of regulated pollutants defined above in order for a facility to qualify for a small business fee reduction. A business may choose to operate above those limits listed below and in accordance with the set emission limits in their GCP, but will no longer qualify for a fee reduction. If at any time production amounts exceed the limits below or if the number of employees exceed 10 (including all subsidiaries) the department should be notified of the status change in accordance with IV.C.1.b. of your GCP.

GCP-2: Quarrying, Crushing, and Screening Facilities – will produce less than or equal to 760,000 tons per year (TPY).

GCP-3: Hot Mix Asphalt Plants – batch facilities will produce less than or equal to 60,000 TPY, or drum facilities will produce less than or equal to 130,000 TPY.

GCP-5: Concrete Batch Plants – facilities will have total on-site engine capacity of less than or equal to 180 horsepower and produce less than or equal to 130,000 yards per year.

The exact location of the facility will be 35.98362 and -105.36961 decimal degrees. The approximate location of this site is 1.75 miles north of Mora in Mora County.

Air emissions of any regulated air contaminant will be less than or equal to:

| | Tons per year (TPY) |
|--|---------------------|
| Total Suspended Particulates | 95 |
| Nitrogen Oxides (NO _x) | 95 |
| Carbon Monoxide (CO) | 95 |
| Volatile Organic Compounds (VOC) | 95 |
| Sulfur Dioxide (SO ₂) | 50 |
| Any one (1) Hazardous Air Pollutant (HAP) | 8 |
| Sum of all Hazardous Air Pollutants (HAPs) | 23 |

The standard operating schedule of this facility will be during daylight hours only.

The owner and/or operator of the plant is:

DP-1090, El campamento y centro de retiro cristiano El Porvenir propone renovar el Permiso de Descarga para la descarga de hasta 9,500 galones por día de aguas residuales domésticas a un sistema de tratamiento y eliminación. Los posibles contaminantes de este tipo de descarga incluyen compuestos de nitrógeno. La instalación está ubicada en 1 Christian Camp Drive, aproximadamente 2 millas al noroeste de El Porvenir, en la Sección 12, Municipio 17 Norte, Rango 14 Este, condado de San Miguel. Las aguas subterráneas que tienen más probabilidad de ser afectadas se encuentran a una profundidad de aproximadamente 20 pies y tenían una concentración de sólidos disueltos totales antes de la descarga de 86 miligramos por litro. Pursuant to Section 111 and Section 213 of the Clean Air Act (42 U.S.C. sections 7411 and 7547) and 40 CFR Parts 60 and 1039, and subject to the terms and conditions prescribed in those provisions, this certificate of conformity is hereby issued with respect to the test engines which have been found to conform to applicable requirements and which represent the following engines, by engine family, more fully described in the documentation required by 40 CFR Parts 60 and 1039 and produced in the stated model year.

This certificate of conformity covers only those new compression-ignition engines which conform in all material respects to the design specifications that applied to those engines described in the documentation required by 40 CFR Parts 60 and 1039 and which are produced during the model year stated on this certificate of the said manufacturer, as defined in 40 CFR Parts 60 and 1039.

It is a term of this certificate that the manufacturer shall consent to all inspections described in 40 CFR 1068 and authorized in a warrant or court order. Failure to comply with the requirements of such a warrant or court order may lead to revocation or suspension of this certificate for reasons specified in 40 CFR Parts 60 and 1039. It is also a term of this certificate that this certificate may be revoked or suspended or rendered void *ab initio* for other reasons specified in 40 CFR Parts 60 and 1039.

This certificate does not cover engines sold, offered for sale, or introduced, or delivered for introduction, into commerce in the U.S. prior to the effective date of the certificate.

NOTE: Specifications are subject to change without notice.

Because KPI-JCI may use in its catalog & literature, field photographs of its products which may have been modified by the owners, products furnished by KPI-JCI may not necessarily be as illustrated therein. Also continuous design progress makes it necessary that specifications be subject to change without notice. All sales of the products of KPI-JCI are subject to the provisions of its standard warranty. KPI-JCI does not warrant or represent that its products meet any federal, state, or local statutes, codes, ordinances, rules, standards or other regulations, including OSHA and MSHA covering safety, pollution, electrical wiring, etc. Compliance with these statutes and regulations is the responsibility of the user and will be dependent upon the area and the use to which the product is put by the user. In some photographs, guards may have been removed for illustrative purposes only. This equipment should not be operated without all guards attached in their normal position. Placement of guards and other safety equipment is often dependent upon the area and how the product is used. A safety study should be made by the user of the application, and, if required additional guards, warning signs and other safety devices should be installed by the user, wherever appropriate before operating the products.

^a Emission factors represent uncontrolled emissions unless noted. Emission factors in lb/ton of material throughput. SCC = Source Classification Code. ND = no data.

^b Controlled sources (with wet suppression) are those that are part of the processing plant that employs current wet suppression technology similar to the study group. The moisture content of the study group without wet suppression systems operating (uncontrolled) ranged from 0.21 to 1.3 percent and the same facilities operating wet suppression systems (controlled) ranged from 0.55 to 2.88 percent. Due to carry over or the small amount of moisture required, it has been shown that each source, with the exception of crushers, does not need to employ direct water sprays. Although the moisture content was the only variable measured, other process features may have as much influence on emissions from a given source. Visual observations from each source under normal operating conditions are probably the best indicator of which emission factor is most appropriate. Plants that employ sub-standard control measures as indicated by visual observations should use the uncontrolled factor with an appropriate control efficiency that best reflects the effectiveness of the controls employed.

^c Although total suspended particulate (TSP) is not a measurable property from a process, some states may require estimates of TSP emissions. No data are available to make these estimates. However, relative ratios in AP-42 Sections 13.2.2 and 13.2.4 indicate that TSP emission factors may be estimated by multiplying PM-10 by 2.1.

Table 11.19.2-2 (cont.).

- ^d Emission factors for total particulate are not presented pending a re-evaluation of the EPA Method 201a test data and/or results of emission testing. This re-evaluation is expected to be completed by July 1995.
