Dear Pamela Jones,

I support the New Mexico Environment Department's petition to designate 245 miles of streams that meet New Mexico's "Criteria One Waters" standards as Outstanding National Resource Waters (ONRW). Criteria One Waters have already been identified as important to New Mexico or the nation, such as special trout waters or waters in state or federal or national parks.

New Mexicans value clean water. It provides drinking water for communities, irrigation for farmers and acequia parciales, habitat for wildlife, outdoor recreation, and businesses.

New Mexico is an arid state. Climate change threatens our surface waters as warming temperatures disrupt precipitation patterns and steadily diminish flows. Protecting headwater streams and tributaries is an instrumental way to build resilience into our precious rivers, prolong water flow, support wildlife, maintain acequia agricultural practices and culture, and provide a basis for a strong outdoor recreation economy.

Many of the rivers and streams nominated in the Environment Department's petition are managed as Special Trout Waters by the New Mexico Department of Game & Fish. Anglers from New Mexico and across the United States and the world come to New Mexico to fish these unique waters. Importantly, providing additional support for Special Trout and other special waters also provides clean water for endangered, threatened, or at-risk species as well as for species with key economic and ecological significance, including the Rocky Mountain bighorn, elk, mule deer, mountain lions, bobcats, and bald eagles.

ONRW protections would provide much-needed water quality protections to these vital water resources. Outstanding Waters designations do not threaten traditional community water uses such as acequia maintenance and livestock grazing. In fact, ONRW designations protect existing, ongoing activities and prohibit only new pollution or increased pollution from sources such as mining, development and the impacts of climate change.

The nominated waters are part of the lifeblood for New Mexicans. Our culture, economy, and ecosystems all rely on clean water and this designation will protect these streams for today's residents as well as for future generations.

I join tribal communities, state and local government officials, farmers and ranchers, and recreationists in asking the Water Quality Control Commission to safeguard the water quality of these waters by formally approving them as Outstanding National Resource Waters under the federal Clean Water Act.

I urge you to designate all the nominated waters in the petition as Outstanding National Resource Waters.

Sincerely,  
Ms Ania Martinez  
409 64th St SW Albuquerque, NM 87121-2422

Dear Pamela Jones,

I support the New Mexico Environment Department's petition to designate 245 miles of streams that meet New Mexico's "Criteria One Waters" standards as Outstanding National Resource Waters (ONRW). Criteria One Waters have already been identified as important to New Mexico or the nation, such as special trout waters or waters in state or federal or national parks.

New Mexicans value clean water. It provides drinking water for communities, irrigation for farmers and acequia parciantes, habitat for wildlife, outdoor recreation, and businesses.

New Mexico is an arid state. Climate change threatens our surface waters as warming temperatures disrupt precipitation patterns and steadily diminish flows. Protecting headwater streams and tributaries is an instrumental way to build resilience into our precious rivers, prolong water flow, support wildlife, maintain acequia agricultural practices and culture, and provide a basis for a strong outdoor recreation economy.

Many of the rivers and streams nominated in the Environment Department's petition are managed as Special Trout Waters by the New Mexico Department of Game & Fish. Anglers from New Mexico and across the United States and the world come to New Mexico to fish these unique waters. Importantly, providing additional support for Special Trout and other special waters also provides clean water for endangered, threatened, or at-risk species as well as for species with key economic and ecological significance, including the Rocky Mountain bighorn, elk, mule deer, mountain lions, bobcats, and bald eagles.

ONRW protections would provide much-needed water quality protections to these vital water resources. Outstanding Waters designations do not threaten traditional community water uses such as acequia maintenance and livestock grazing. In fact, ONRW designations protect existing, ongoing activities and prohibit only new pollution or increased pollution from sources such as mining, development and the impacts of climate change.

The nominated waters are part of the lifeblood for New Mexicans. Our culture, economy, and ecosystems all rely on clean water and this designation will protect these streams for today's residents as well as for future generations.

I join tribal communities, state and local government officials, farmers and ranchers, and recreationists in asking the Water Quality Control Commission to safeguard the water quality of these waters by formally approving them as Outstanding National Resource Waters under the federal Clean Water Act.

I urge you to designate all the nominated waters in the petition as Outstanding National Resource Waters.

Sincerely,  
Ms Kathy Madden  
10 Floresta Dr Santa Fe, NM 87508-2260

Dear Pamela Jones,

I support the New Mexico Environment Department's petition to designate 245 miles of streams that meet New Mexico's "Criteria One Waters" standards as Outstanding National Resource Waters (ONRW). Criteria One Waters have already been identified as important to New Mexico or the nation, such as special trout waters or waters in state or federal or national parks.

New Mexicans value clean water. It provides drinking water for communities, irrigation for farmers and acequia parciales, habitat for wildlife, outdoor recreation, and businesses.

New Mexico is an arid state. Climate change threatens our surface waters as warming temperatures disrupt precipitation patterns and steadily diminish flows. Protecting headwater streams and tributaries is an instrumental way to build resilience into our precious rivers, prolong water flow, support wildlife, maintain acequia agricultural practices and culture, and provide a basis for a strong outdoor recreation economy.

Many of the rivers and streams nominated in the Environment Department's petition are managed as Special Trout Waters by the New Mexico Department of Game & Fish. Anglers from New Mexico and across the United States and the world come to New Mexico to fish these unique waters. Importantly, providing additional support for Special Trout and other special waters also provides clean water for endangered, threatened, or at-risk species as well as for species with key economic and ecological significance, including the Rocky Mountain bighorn, elk, mule deer, mountain lions, bobcats, and bald eagles.

ONRW protections would provide much-needed water quality protections to these vital water resources. Outstanding Waters designations do not threaten traditional community water uses such as acequia maintenance and livestock grazing. In fact, ONRW designations protect existing, ongoing activities and prohibit only new pollution or increased pollution from sources such as mining, development and the impacts of climate change.

The nominated waters are part of the lifeblood for New Mexicans. Our culture, economy, and ecosystems all rely on clean water and this designation will protect these streams for today's residents as well as for future generations.

I join tribal communities, state and local government officials, farmers and ranchers, and recreationists in asking the Water Quality Control Commission to safeguard the water quality of these waters by formally approving them as Outstanding National Resource Waters under the federal Clean Water Act.

I urge you to designate all the nominated waters in the petition as Outstanding National Resource Waters.

Sincerely,  
Ms Carol Campbell  
3413 Black Hills Rd NE Albuquerque, NM 87111-5406

Dear Pamela Jones,

I support the New Mexico Environment Department's petition to designate 245 miles of streams that meet New Mexico's "Criteria One Waters" standards as Outstanding National Resource Waters (ONRW). Criteria One Waters have already been identified as important to New Mexico or the nation, such as special trout waters or waters in state or federal or national parks.

New Mexicans value clean water. It provides drinking water for communities, irrigation for farmers and acequia parciantes, habitat for wildlife, outdoor recreation, and businesses.

New Mexico is an arid state. Climate change threatens our surface waters as warming temperatures disrupt precipitation patterns and steadily diminish flows. Protecting headwater streams and tributaries is an instrumental way to build resilience into our precious rivers, prolong water flow, support wildlife, maintain acequia agricultural practices and culture, and provide a basis for a strong outdoor recreation economy.

Many of the rivers and streams nominated in the Environment Department's petition are managed as Special Trout Waters by the New Mexico Department of Game & Fish. Anglers from New Mexico and across the United States and the world come to New Mexico to fish these unique waters. Importantly, providing additional support for Special Trout and other special waters also provides clean water for endangered, threatened, or at-risk species as well as for species with key economic and ecological significance, including the Rocky Mountain bighorn, elk, mule deer, mountain lions, bobcats, and bald eagles.

ONRW protections would provide much-needed water quality protections to these vital water resources. Outstanding Waters designations do not threaten traditional community water uses such as acequia maintenance and livestock grazing. In fact, ONRW designations protect existing, ongoing activities and prohibit only new pollution or increased pollution from sources such as mining, development and the impacts of climate change.

The nominated waters are part of the lifeblood for New Mexicans. Our culture, economy, and ecosystems all rely on clean water and this designation will protect these streams for today's residents as well as for future generations.

I join tribal communities, state and local government officials, farmers and ranchers, and recreationists in asking the Water Quality Control Commission to safeguard the water quality of these waters by formally approving them as Outstanding National Resource Waters under the federal Clean Water Act.

I urge you to designate all the nominated waters in the petition as Outstanding National Resource Waters.

Sincerely,  
Ms Dottie Butler  
227 Gallina Canyon Rd Valdez, NM 87580-8005

Dear Pamela Jones,

I support the New Mexico Environment Department's petition to designate 245 miles of streams that meet New Mexico's "Criteria One Waters" standards as Outstanding National Resource Waters (ONRW). Criteria One Waters have already been identified as important to New Mexico or the nation, such as special trout waters or waters in state or federal or national parks.

New Mexicans value clean water. It provides drinking water for communities, irrigation for farmers and acequia parciantes, habitat for wildlife, outdoor recreation, and businesses.

New Mexico is an arid state. Climate change threatens our surface waters as warming temperatures disrupt precipitation patterns and steadily diminish flows. Protecting headwater streams and tributaries is an instrumental way to build resilience into our precious rivers, prolong water flow, support wildlife, maintain acequia agricultural practices and culture, and provide a basis for a strong outdoor recreation economy.

Many of the rivers and streams nominated in the Environment Department's petition are managed as Special Trout Waters by the New Mexico Department of Game & Fish. Anglers from New Mexico and across the United States and the world come to New Mexico to fish these unique waters. Importantly, providing additional support for Special Trout and other special waters also provides clean water for endangered, threatened, or at-risk species as well as for species with key economic and ecological significance, including the Rocky Mountain bighorn, elk, mule deer, mountain lions, bobcats, and bald eagles.

ONRW protections would provide much-needed water quality protections to these vital water resources. Outstanding Waters designations do not threaten traditional community water uses such as acequia maintenance and livestock grazing. In fact, ONRW designations protect existing, ongoing activities and prohibit only new pollution or increased pollution from sources such as mining, development and the impacts of climate change.

The nominated waters are part of the lifeblood for New Mexicans. Our culture, economy, and ecosystems all rely on clean water and this designation will protect these streams for today's residents as well as for future generations.

I join tribal communities, state and local government officials, farmers and ranchers, and recreationists in asking the Water Quality Control Commission to safeguard the water quality of these waters by formally approving them as Outstanding National Resource Waters under the federal Clean Water Act.

I urge you to designate all the nominated waters in the petition as Outstanding National Resource Waters.

Sincerely,  
Ms Kimberly Petri  
408 W13th St Silver City, NM 88061

Dear Pamela Jones,

I support the New Mexico Environment Department's petition to designate 245 miles of streams that meet New Mexico's "Criteria One Waters" standards as Outstanding National Resource Waters (ONRW). Criteria One Waters have already been identified as important to New Mexico or the nation, such as special trout waters or waters in state or federal or national parks.

New Mexicans value clean water. It provides drinking water for communities, irrigation for farmers and acequia parciales, habitat for wildlife, outdoor recreation, and businesses.

New Mexico is an arid state. Climate change threatens our surface waters as warming temperatures disrupt precipitation patterns and steadily diminish flows. Protecting headwater streams and tributaries is an instrumental way to build resilience into our precious rivers, prolong water flow, support wildlife, maintain acequia agricultural practices and culture, and provide a basis for a strong outdoor recreation economy.

Many of the rivers and streams nominated in the Environment Department's petition are managed as Special Trout Waters by the New Mexico Department of Game & Fish. Anglers from New Mexico and across the United States and the world come to New Mexico to fish these unique waters. Importantly, providing additional support for Special Trout and other special waters also provides clean water for endangered, threatened, or at-risk species as well as for species with key economic and ecological significance, including the Rocky Mountain bighorn, elk, mule deer, mountain lions, bobcats, and bald eagles.

ONRW protections would provide much-needed water quality protections to these vital water resources. Outstanding Waters designations do not threaten traditional community water uses such as acequia maintenance and livestock grazing. In fact, ONRW designations protect existing, ongoing activities and prohibit only new pollution or increased pollution from sources such as mining, development and the impacts of climate change.

The nominated waters are part of the lifeblood for New Mexicans. Our culture, economy, and ecosystems all rely on clean water and this designation will protect these streams for today's residents as well as for future generations.

I join tribal communities, state and local government officials, farmers and ranchers, and recreationists in asking the Water Quality Control Commission to safeguard the water quality of these waters by formally approving them as Outstanding National Resource Waters under the federal Clean Water Act.

I urge you to designate all the nominated waters in the petition as Outstanding National Resource Waters.

Sincerely,  
ms Melinda Tossani  
PO Box 6790 Santa Fe, NM 87502-6790

Dear Pamela Jones,

I support the New Mexico Environment Department's petition to designate 245 miles of streams that meet New Mexico's "Criteria One Waters" standards as Outstanding National Resource Waters (ONRW). Criteria One Waters have already been identified as important to New Mexico or the nation, such as special trout waters or waters in state or federal or national parks.

New Mexicans value clean water. It provides drinking water for communities, irrigation for farmers and acequia parciantes, habitat for wildlife, outdoor recreation, and businesses.

New Mexico is an arid state. Climate change threatens our surface waters as warming temperatures disrupt precipitation patterns and steadily diminish flows. Protecting headwater streams and tributaries is an instrumental way to build resilience into our precious rivers, prolong water flow, support wildlife, maintain acequia agricultural practices and culture, and provide a basis for a strong outdoor recreation economy.

Many of the rivers and streams nominated in the Environment Department's petition are managed as Special Trout Waters by the New Mexico Department of Game & Fish. Anglers from New Mexico and across the United States and the world come to New Mexico to fish these unique waters. Importantly, providing additional support for Special Trout and other special waters also provides clean water for endangered, threatened, or at-risk species as well as for species with key economic and ecological significance, including the Rocky Mountain bighorn, elk, mule deer, mountain lions, bobcats, and bald eagles.

ONRW protections would provide much-needed water quality protections to these vital water resources. Outstanding Waters designations do not threaten traditional community water uses such as acequia maintenance and livestock grazing. In fact, ONRW designations protect existing, ongoing activities and prohibit only new pollution or increased pollution from sources such as mining, development and the impacts of climate change.

The nominated waters are part of the lifeblood for New Mexicans. Our culture, economy, and ecosystems all rely on clean water and this designation will protect these streams for today's residents as well as for future generations.

I join tribal communities, state and local government officials, farmers and ranchers, and recreationists in asking the Water Quality Control Commission to safeguard the water quality of these waters by formally approving them as Outstanding National Resource Waters under the federal Clean Water Act.

I urge you to designate all the nominated waters in the petition as Outstanding National Resource Waters.

Sincerely,  
ms Sandra Hareld  
2331 Westside Blvd SE Rio Rancho, NM 87124-4765
