

Midway Grocery, Jarales RFP

QUESTION: After careful review of the RFP the groundwater contamination was not addressed under the prescribed remediation. Since groundwater is at such a shallow depth and will be encountered during the excavation of contaminated soil and possibly in the remediation of vapors within the residence is groundwater contamination an issue with cleanup goals?

ANSWER: Remediation of groundwater hydrocarbon contamination is one of the goals of this clean-up effort. A responsive proposal should include a remediation strategy for achieving this as well as other goals identified in the Request for Proposals.
