

Judy Bock

The Upper Hondo Soil and Water Conservation District wished to make the following comment regarding this regulation. This regulation proposes strict limitations to the use of the treated produced water, it is felt that the ownership of the treated produced water should belong to whomever is in possession of the treated produced water. Therefore allowing them to use it in the construction of roads, etc. pertaining to the oil and gas industry. This would in turn require less usage of good potable water for these resources.
