**Subject: Submittal of the Site Treatment Plan, Fiscal Year 2020 Annual Update and
Proposed Revision 31.0, Federal Facility Compliance Order, October 4, 1995,
Los Alamos National Laboratory**

Dear Ms. Briley:

Enclosed is the “Los Alamos National Laboratory Federal Facility Compliance Order Annual Site Treatment Plan Update for Fiscal Year 2020, Revision 31.0.” This annual report to the New Mexico Environment Department is being submitted by the U.S. Department of Energy (DOE) Environmental Management Los Alamos Field Office (EM-LA); the DOE National Nuclear Security Administration Los Alamos Field Office (NA-LA); Newport News Nuclear BWXT-Los Alamos, LLC (N3B); and Triad National Security, LLC (Triad) (the Respondents) as set forth in the Federal Facility Compliance Order (FFCO).

If you have any questions, please contact Anthony Stone at (505) 257-7431 (anthony.stone@em-la.doe.gov) or Arturo Duran at (505) 257-7907 (arturo.duran@em.doe.gov).

Certification

In accordance with the requirements of Section XX of the FFCO, "Documents, Information, and Reporting Requirements," we certify, as the project managers responsible for overseeing the implementation of the STP for LANL, and representing DOE EM-LA, DOE NA-LA, N3B, and Triad, that to the best of our knowledge, the information in this document is true, accurate, and complete.

Sincerely,

Kirk D.
Lachman

INTRODUCTION

On October 6, 1992, Congress passed the Federal Facility Compliance Act (FFCA) to address compliance by the U.S. Department of Energy (DOE) with the Land Disposal Restrictions (LDR) for the storage of mixed waste set forth in Section 3004(j) of the Resource Conservation and Recovery Act (RCRA). The FFCA requires DOE to submit a Site Treatment Plan (STP) for developing treatment capacities and technologies to treat all of the facility's mixed waste, regardless of the time generated, to the standards promulgated pursuant to Section 3004(m) of the RCRA. The FFCA provides that the appropriate regulatory authority, the New Mexico Environment Department (NMED), may approve, approve with modifications, or disapprove the submittal of the STP. Prior to making such a determination, the FFCA requires NMED to provide public notice, consider public comments, and consult with the U.S. Environmental Protection Agency (EPA) and any other state in which a facility affected by the STP is located.

On October 4, 1995, NMED issued a Federal Facility Compliance Order (FFCO) to DOE and the management and operating contractor, the University of California (UC) Regents. On June 1, 2006, Los Alamos National Security, LLC (LANS) replaced UC as operating contractor of Los Alamos National Laboratory (LANL). LANS then assumed responsibility for FFCO compliance. On April 30, 2018, Newport News Nuclear BWXT-Los Alamos, LLC (N3B) became the prime contractor for the DOE Environmental Management Los Alamos Field Office (EM-LA), and is responsible for LANL site-wide cleanup as well as waste management and shipping of legacy STP and remediation wastes at Technical Area 54 (TA-54), Areas G and L. Per the LANS/N3B Service Agreement/Work Authorizations signed April 30, 2018, N3B became the lead contractor for FFCO compliance. As of November 1, 2018, Triad National Security, LLC (Triad) became the new prime contractor for DOE National Nuclear Security Administration (NNSA), replacing LANS. Triad is responsible for the mixed-waste management reporting in those areas managed by Triad.

At present, N3B is responsible for all quarterly and annual FFCO STP reporting requirements, working closely with Triad to fulfill FFCO requirements for all LANL STP requirements. N3B and Triad, as well as EM-LA and NNSA, will collectively be referred to as "the Respondents."

The FFCO requires the Respondents to implement an STP for the treatment of mixed waste at LANL. The STP is intended to fulfill the FFCA requirements and establish an enforceable framework to allow the Respondents to achieve full compliance with LDR requirements under the New Mexico Hazardous Waste Act (HWA) and RCRA. The compliance dates set forth in the STP are enforceable time periods in which Respondents are required to treat or otherwise meet the requirements set forth for LDR under the HWA and RCRA.

On March 31, 1995, DOE submitted its proposed STP, which addressed treatment capacities and technologies to treat all of LANL's mixed waste, regardless of the time it was generated, to NMED. On April 17, 1995, the public was provided an opportunity to comment to NMED on DOE's draft STP. After considering public comment and otherwise complying with the FFCA, NMED approved the draft STP with modifications on October 4, 1995.

Section VII of the FFCO requires the Respondents to submit an Annual STP Update to NMED each year on or before March 31. The FFCO requires that the Annual Update bring the information in both the Background and the Compliance Plan (CP) current to the end of the previous federal fiscal year (FY). Part I of this Annual Update constitutes the update to the Background. Part II contains the changes that have occurred since the last Annual Update and also identifies proposed revisions and amendments to the CP. Part III incorporates the changes in Part II into the proposed CP revision (Revision 31.0).

PART I BACKGROUND UPDATE

1.0 INTRODUCTION

The Background (Part I) provides the following information.

- The estimated volume of covered waste in storage at the end of the previous FY and anticipated to be placed in storage for the next five FYs.
- A progress report from the end of the previous federal FY describing treatment progress and treatment technology development for each treatment facility and activity scheduled in the STP.
- A description, if applicable, of current or anticipated alternative treatment technology that is being evaluated for use instead of treatment technologies or capacities identified in the STP.
- A description of DOE's funding for STP-related activities and any funding issues that may affect the schedule.
- The status of the "No-Migration Variance Petition" or any treatability variances.
- A progress report on characterization and/or treatment capabilities or plans for mixed transuranic (MTRU) waste related to the waste treatment standards, if any, for the DOE Waste Isolation Pilot Plant (WIPP) facility near Carlsbad, New Mexico.

The STP-covered waste inventory is verified during quality control activities. Inconsistencies in treatability group or volume between the original inventory and the current inventory may exist. These inconsistencies are reconciled annually with the STP update. In an effort to correct these inconsistencies and streamline the STP reporting process, the Respondents will work on incorporating the STP Report data function utilizing the Waste Compliance and Tracking System (WCATS).

2.0 AMOUNT OF EACH COVERED WASTE STORED AT LANL

2.1 Mixed Low-Level Waste Inventory

During FY20, the STP-covered mixed low-level waste (MLLW) inventory decreased from 248.409 m³ to 218.067 m³. This decrease was due to off-site shipments of -56.640 m³. There were also contributions from administrative adjustments of 23.745 m³ and new covered waste of 2.553 m³.

The transuranic (TRU)/MTRU recharacterization process will continue to produce 10-100 nCi/g waste (LA-W935). The TRU/MTRU recharacterization process was due to a backlog of waste as a result of previous shipping pauses, limited shipments to WIPP, and past restrictions on-site at TA-54, Areas G and L. These restrictions delayed the final confirmation, characterization, certification, and shipment for off-site treatment and disposal of these containers. Table 2.1-1 summarizes changes to the estimated FY20 STP-covered MLLW inventory.

Appendix A provides the detailed changes to the FY20 STP-covered MLLW inventory by treatability group, which includes the inventory for TA-54 in Appendix A, Table A-1, and the inventory for Triad in Table A-2. Appendix B, Table B-1, lists the FY20 MLLW shipments. Administrative adjustments to the MLLW inventory are categorized in Appendix C, Table C-1, for the TA-54 inventory and Table C-2 for the Triad-managed inventory. The MLLW inventory reported in the FY19 Annual Update is included as Appendix D, Table D-1, for TA-54 and Table D-2 for the Triad-managed inventory.

Table 2.1-1 STP-Covered MLLW Inventory Summary

Contribution	Volume (m ³)
MLLW Inventory Reported in FY19 at TA-54	221.453
MLLW Inventory Reported in FY19 for Triad	26.956
Proposed Revision 31.0	
N3B New Covered Waste	2.553
Triad New Covered Waste	0
N3B Administrative Adjustments	23.745
Triad Administrative Adjustments	0
N3B Off-site Shipment	-56.640
Triad Off-site Shipment	0
Off-site Treatment/Recycle	NA ¹
On-site Decontamination	NA ¹
Treatability Study Use	NA ¹
MLLW Inventory Reported in FY20 Annual Update	218.067

¹NA = No Activity

Note: Calculations have been rounded to three places after the decimal point.

2.2 Mixed Transuranic Inventory Summary

During FY20, STP-covered MTRU inventories decreased from approximately 1751.711 m³ to 1573.816 m³. This decrease was due to waste removed from the STP inventory (-172.270 m³ shipped to WIPP), the transfer of the last Confinement Vessel Disposition (CVD) of -3.199 m³ and administrative adjustments of -69.816 m³. There were also contributions from new covered waste of 67.390 m³.

Table 2.2-1 summarizes changes to the estimated FY20 MTRU STP-covered waste inventory. Appendix E contains additional detail for the MTRU inventory; Table E-1 covers the TA-54 inventory; Table E-2 covers the inventory for Triad at TA-55, CMR, and TWF; and Table E-3 covers the remaining original population of the Framework Agreement volume of STP-covered MTRU waste that is part of the “non-cemented above-ground Environmental Management (EM) Legacy TRU” (MTRU waste only). The Framework Agreement volume (discussed in Part 3, Section 4.0 of the CP) is now detailed in Table E-3; therefore, it is no longer summarized in Table E-1. Appendix F, Table F-1, provides a summary of FY20 MTRU shipments to WIPP. In Appendix G, Tables G-1, G-2, and G-3 describe the administrative adjustments that were made to resolve differences in the TA-54, TA-55/CMR/TWF, and Framework Agreement MTRU inventory data, respectively.

Administrative adjustments typically represent the following types of activities:

- Respondents may correct database entries so that waste items not previously listed as STP waste are now identified and included as STP waste.

- Respondents may correct waste data, such as volume or EPA codes, through quality control activities. Under DOE Standards, waste that was formerly classified as MTRU because it had radioactivity greater than 10 nCi/g has been reclassified to MLLW (LA-W935) if its activity is less than 100 nCi/g.
- New analytical data may also require that waste streams previously managed as TRU waste should be reclassified and managed as MTRU waste.
- During repacking or other quality control activities, TRU waste may be recharacterized as MTRU waste when previously unidentified hazardous contents, such as lead, are determined to be present.
- During repacking, treatability groups are frequently reassigned to be consistent with current management and shipping criteria.
- Containers of waste are occasionally determined not to belong to mixed waste streams and are reclassified as TRU waste; removal of WIPP-prohibited items, if they are the only hazardous constituent, will result in the remaining waste being classified as nonmixed.
- Addition or removal of 85-gallon overpacks changes the volume of waste in the inventory; rounding container volumes to three decimal places also changes the inventory volume.

Table 2.2-1 STP-Covered MTRU Inventory Summary

Description	Volume (m ³)
MTRU Inventory Reported in FY19 at TA-54	1406.159
MTRU Inventory Reported in FY19 for Triad at TA-55/CMR/TWF	345.552
Proposed Revision 31.0	
New Covered MTRU Waste at TA-54	35.542
New Covered MTRU Waste for Triad at TA-55/CMR/TWF	31.848
MTRU Waste Removed from Inventory (Shipped to WIPP) in FY20	-172.270
MTRU Inventory Reported in FY19 at Waste Control Specialists, LLC (WCS) (FY14 on Hold)	44.834*
MTRU Waste Shipped from WCS to WIPP in FY20 (FY14 on Hold)	0*
MTRU Inventory Reported in FY20 at WCS (FY14 on Hold)	44.834*
Administrative Adjustments for TA-54	-69.816
This is the transfer of the last Confinement Vessel Disposition (CVD) in FY20 from TA-55 to CMR where it is removed from the STP (each CVD is 3.199 m ³).	-3.199
MTRU Inventory Reported in FY20 Annual Update	1573.816

* NMED has determined that the removal of MTRU from the STP will be deferred until more information becomes available and the final disposition of the waste currently stored at the off-site facility is determined. Amount already included in the MTRU STP-covered inventory.

Appendix G includes administrative adjustment changes to the MTRU waste inventory that resulted from repacking activities. MTRU waste volumes in the STP inventory reflect the volume of the container rather than the volume of the contents. When containers are repacked, the STP inventory volume of any given

treatability group may either increase or decrease. When a container is repacked, the contents are sometimes split into two or more new containers to meet shipping and waste acceptance criteria or to meet characterization criteria (e.g., nondestructive analysis calibration limits). In addition, the new containers may be assigned to different treatability groups depending on the contents of each drum. Therefore, the volume of a single drum may increase into more volume than the original container. For example, repacking one container of *Cemented Sludge* (0.208 m³) may result in one drum of *Combined Combustible-Noncombustible Waste* (0.208 m³) and one drum of *Noncombustible Waste* (0.208 m³). In addition, changes in the waste volume in the STP inventory occur when an 85-gallon ‘overpack’ is removed from, or added to, a 55-gallon drum during repackaging. Removal of overpacks decreases the volume of waste in the STP inventory. Adding an overpack to a 55-gallon drum increases the volume of waste shown in the STP inventory.

3.0 TREATMENT PROGRESS

3.1 Off-site Treatment

During FY20, covered MLLW streams were shipped for treatment and/or disposal to the following off-site commercial treatment facilities: Perma-Fix Northwest Inc., Waste Control Specialists, and Energy Solutions. See Appendix H, Table H-1 for commercial facilities contacted for waste treatment capabilities. Appendix B summarizes LANL’s off-site shipments for treatment and/or disposal of covered MLLW in FY20.

3.2 Off-site Recycling

Respondents did not recycle any STP-covered waste off-site in FY20.

3.3 Onsite Treatment and Recycling

Respondents did not treat or recycle any STP-covered waste on-site in FY20.

3.4 Onsite Lead Decontamination

No LANL STP-covered waste was decontaminated on-site during FY20.

3.5 Treatability Studies

Respondents conducted no treatability studies in FY20.

3.6 Administrative Adjustments and Corrections

Administrative adjustments and corrections are due to discrepancies found during quality control activities related to preparing waste for treatment, inventory, and disposal or when preparing the STP Annual Update. A data quality review is conducted annually to compare shipment notifications and shipping manifests with database updates.

3.6.1 Adjustments to MLLW Inventory

Appendix C (Tables C-1 and C-2) details the administrative adjustments to the MLLW inventory. The principal adjustment reflects the transfer of MTRU waste to MLLW (LA-W935, 10-100 nCi/g). A substantial volume of LANL’s STP-covered MTRU waste has been determined to no longer meet the criteria for TRU waste and has been reclassified as MLLW. If previously unidentified hazardous waste constituents, such as lead, are revealed during repacking or other quality control activities, low-level waste (LLW) may be recharacterized as MLLW. (Appendices C and G).

3.6.2 Adjustments to MTRU Inventory

During the preparation of the FY20 STP Annual Update, Respondents identified a number of adjustments to the MTRU inventory volume (Appendix G, Tables G-1, G-2, and G-3), including additions of newly identified STP-covered waste, recharacterization of waste, and reclassification of MTRU waste to MLLW. Other adjustments were needed to account for volume changes due to repacking of waste and transfers of waste from one treatability group to another or to correct database entries.

4.0 TREATMENT TECHNOLOGY DEVELOPMENT

During FY20, the availability of commercial and federal facility off-site treatment and disposal capacity for MLLW remained stable. As a result of DOE's increasing reliance on commercial treatment and disposal for mixed wastes, nearly all funding for on-site technology development has been prioritized to support off-site treatment and disposal of mixed wastes. DOE treatment technology development initiatives are generally limited to specific technologies or technology adaptations in response to specific needs that cannot be addressed through commercial facilities.

4.1 Treatment Technologies Being Evaluated/Developed

Respondents continue to monitor the development of potential treatment technologies that may become available in the future. Some of these technologies are being developed at LANL and at other DOE sites. Respondents developed a treatment method to address the type of TRU waste associated with the February 14, 2014, release of radioactivity at WIPP. The treatment process was approved and was utilized to address remediated nitrate salt and above ground unremediated nitrate salt waste in 2017 and 2018, as required by the January 22, 2016, Settlement Agreement and Stipulated Final Order, 14-20 (CO) between DOE/LANS and NMED's Hazardous Waste Bureau (HWB).

4.1.1 Off-site Commercial Treatment Facilities

Respondents continue to monitor the availability and capabilities of off-site commercial facilities for treatment technologies and permitting that are appropriate to LANL waste. These facilities are listed in Appendix H (Table H-1).

4.1.2 Off-site DOE Treatment Facilities

Respondents continue to monitor the availability and capabilities of off-site DOE facilities for treatment technologies and permitting that are appropriate to LANL waste.

5.0 DOE FUNDING FOR STP-RELATED ACTIVITIES

Funding to implement the LANL STP for mixed waste during FY20 was sufficient to meet all compliance dates as required by the CP of the STP. FY20 funding is available to support all compliance dates established in the STP. Should funding reductions occur that would affect STP compliance dates, DOE will notify NMED to address compliance schedules and activities.

6.0 TREATMENT VARIANCES

RCRA allows certain case-by-case variances from LDR standards. Variances that may be sought under RCRA relate to requests for substitution of an alternative treatment technology in place of the LDR-required treatment technology. This section discusses any potential treatment variances related to LANL's covered waste, as described below.

6.1 WIPP No-Migration Variance Petition/Land Withdrawal Act Amendments

WIPP, located near Carlsbad, New Mexico, is a DOE repository for TRU waste generated by the nation's defense-related activities. Some of the TRU waste contains hazardous waste constituents regulated under the RCRA.

The WIPP repository is a deep geologic repository rather than a shallow landfill. It is wholly sited 2,100 ft below the land surface in a salt bed. Because salt has the advantageous characteristic of slow plastic deformation, it is predicted that the salt will entomb the waste and seal it from the human environment, making potential release of hazardous constituents a low-probability event.

The WIPP Land Withdrawal Act Amendments of 1996 (LWAA) (Public Law 104-201, Section 3188) exempted waste designated by the Secretary of Energy for disposal at WIPP from RCRA's LDRs. Following passage of the LWAA, the EPA terminated its review of the No-Migration Variance Petition submitted by DOE to EPA in May 1995. EPA formalized its withdrawal by letter to George Dials, DOE/Carlsbad Area Office Manager, dated December 29, 1997.

On October 29, 1996, DOE submitted its Compliance Certification Application (CCA) to EPA. The CCA is intended to demonstrate to EPA that WIPP meets the requirements of Title 40 of the Code of Federal Regulations (40 CFR) Part 191 and 40 CFR Part 194. On October 23, 1997, EPA announced its proposed decision to issue a Certification of Compliance, subject to a number of specified conditions, and to a public comment period of 120 days. On May 18, 1998, EPA published in the Federal Register (63 FR 27354) its final rule certifying that WIPP will comply with the requirements of Subparts B and C of 40 CFR Part 191 and amending the WIPP compliance criteria in 40 CFR Part 194. The final rule became effective June 17, 1998. On March 25, 1999, WIPP received its first shipment of non-mixed (radioactive only) TRU waste from LANL. Other facilities have also shipped non-mixed TRU waste to WIPP. NMED issued a hazardous waste permit for WIPP on October 27, 1999, authorizing DOE to manage, store, and dispose of contact-handled MTRU waste at the facility.

6.2 Other Treatment Variance(s)

No treatment variances were requested or granted in FY20.

7.0 WIPP FACILITY CAPABILITIES

As discussed above, DOE is disposing of its defense TRU waste, both mixed and nonhazardous, in its deep geologic repository at the WIPP near Carlsbad, New Mexico. This facility is a receiving and disposal facility without the capability of routinely opening and repackaging waste. TRU waste will already be containerized when received at the WIPP. The WIPP is not a generator of TRU waste, and, therefore, will receive all waste in shipments from off-site DOE facilities. In February 2014, NMED received notice of a release at the WIPP nuclear waste repository. A LANL container sent to WIPP experienced an energetic chemical reaction that ultimately led to the release of radioactive material. In light of these events, and the potential need to re-remediate all nitrate salt-bearing waste, NMED determined that the removal of MTRU from the STP be deferred until more information became available; NMED also determined that the remaining abovegrade waste stored at the Waste Control Specialists, LLC (WCS) facility and WIPP would not be returned to LANL until approval to relocate below grade was obtained. All shipments of MTRU covered waste inventory to WIPP were suspended between May 2014 and July 2018, due to the WIPP shutdown. WIPP resumed operations in July 2018.

7.1 Characterization Capabilities at WIPP

Wastes proposed for shipment to WIPP are characterized and certified at LANL by the Central Characterization Project, a contractor to DOE's Carlsbad Field Office.

7.2 MTRU Treatment Capabilities and Plans

WIPP is not required to treat MTRU waste to meet the LDR standards. As described above in Section 6.1, the LWAA exempted wastes designated by the Secretary of Energy for disposal at the WIPP from this requirement.

PART II COMPLIANCE PLAN UPDATE

1.0 INTRODUCTION

This update to the CP contains:

- Changes to the CP occurring since the previous Annual Update, including:
 - correspondence, including notices of shipments; and
 - new covered and deleted waste;
- Proposed revisions and amendments, including:
 - compliance date changes;
 - description of waste deleted in accordance with the requirements in FFCO Section IX, *Deletion of Waste*; and
 - documentation of new covered waste in accordance with the requirements in FFCO Section VIII, *Addition of New Covered Waste*.

2.0 CHANGES AND REVISIONS TO THE CP OCCURRING SINCE THE PREVIOUS ANNUAL UPDATE

This section describes revisions, amendments, or other changes to the LANL CP.

2.1 Activities Completed During FY20

During FY20, a CP activity milestone was completed. Activity Table 4.0-1(B), which was to complete the transfer of the Treatability Code, Metallic Waste, referred to as the Confinement Vessel Disposition (CVD) to CMR for material retrieval, was completed on September 23, 2020. Triad has met and closed this STP milestone, as documented in the NMED-approved FY19 Annual Update Site Treatment Plan, Rev. 30.0, Table 4.0-2 (B), “Complete transfer of Metallic Waste (CVD) to CMR for material retrieval” before the compliance date of October 31, 2021. This transfer of the CVD allows Triad to remove the volume (3.199 m³) from the FY20 STP because it is no longer tracked as waste. It is now considered material for the CVD recovery project at the CMR. (*Letter sent to NMED: EPC-DO: 20-339, LA-UR: 20-28358 sent on October 30, 2020*).

2.2 Expedited Shipment Letters

Expedited shipment letters are listed in Appendix I, Table I-1.

2.3 Correspondence

Between October 1, 2019 and September 30, 2020, Respondents communicated with NMED on issues related to the following:

- FY20 waste shipment notifications;
- FY20 expedited waste shipment notifications;

- Penalty based on informal dispute resolution, Federal Facility Compliance Order, Site Treatment Plan, Compliance Plan (Part III) Los Alamos National Laboratory; and
- Revised penalty based on informal dispute resolution, Federal Facility Compliance Order, Site Treatment Plan, Compliance Plan (Part III) Los Alamos National Laboratory.

This correspondence is listed in Appendix I (Tables I-1, I-2, and I-3). Previously listed correspondence can be found in the previous FY Annual Reports.

3.0 DESCRIPTION OF DELETED WASTE

A proposal for deletion of STP waste items is included with this update as Proposed Revision 3.0 in accordance with FFCO Section IX, *Deletion of Waste*. These deletions are proposed because the wastes were shipped off-site for treatment, disposal, or recycling or were otherwise determined not to be mixed wastes. These covered wastes are included in Appendix B, Appendix F, and Appendix G.

4.0 DOCUMENTATION OF NEW COVERED WASTE

A proposal for addition of STP waste items is included with this update in accordance with FFCO Section VIII, *Addition of Waste*. These additions consist of wastes placed in storage during FY19 and were proposed to become covered wastes in FY20. These covered wastes are included in Appendices A and E. Addition of new covered and newly characterized as MTRU waste to be added to the STP is identified in Section 6.1.

5.0 PROPOSED CHANGES TO THE COMPLIANCE PLAN SCHEDULE

Funding to implement the LANL STP for mixed waste during FY20 was sufficient to meet all compliance dates as required by the CP of the STP. FY20 funding is available to support all compliance dates established in the STP. Should funding reductions occur that would affect STP compliance dates, Respondents will notify NMED to address compliance schedules and activities.

In the FY20, Revision 31.0, annual Site Treatment Plan Report submittal to NMED, DOE/N3B/Triad are proposing to revise the following milestone: (1) **Activity Table 3.1.8-2 (A)** to “complete shipping of existing waste to an off-site treatment facility or complete parallel option” refers to the compressed gases requiring scrubbing waste stream and (2) **Activity Table 3.2-3(A)** to “complete shipping of wastes to an off-site treatment facility, or submit documentation assigning waste items to applicable treatability groups or complete parallel option” refers to the treatment and disposal of the four flanged tritium waste containers (FTWCs).

I. Disposal/Recovery/Treatment Process

Activity Table 3.1.8-2 (A): The compressed gasses requiring scrubbing waste stream activity will involve the recharacterization and repackaging of containers for preparation for shipment to a treatment disposal facility.

Activity Table 3.2-3(A): The four FTWCs need to be vented at TA-54 and processed at the Weapons Engineering Tritium Facility (WETF) under the revised Temporary Authorization LA-UR-20-22103, submitted to NMED on March 9, 2020. The FTWCs require treatment by venting, storage, sorting, segregation and repackaging. The Temporary Authorization allowed these activities to be performed in appropriate locations to ensure the FTWCs can be safely processed and shipped to an off-site treatment, storage, and disposal facility.

II. Justification for Milestone Extension

Activity Table 3.1.8-2 (A): Because of scheduling delays associated with the COVID-19 pandemic, the compressed gasses waste stream planned activities at TA-54 are at a minimum. Therefore, with the limited amount of essential workers and time to process these containers, due to the continuation of the COVID-19 pandemic, the recharacterization and verification of the repackaging process is delayed. N3B is requesting an extension from September 30, 2021, to September 30, 2023.

Current compliance date: September 30, 2021

Proposed Revision 31.0 compliance date: September 30, 2023

Activity Table 3.2-3(A): The four FTWCs need to be vented at TA-54 and processed at the WETF under the Temporary Authorization. However, due to scheduling delays associated with the COVID-19 pandemic, necessary safety basis updates, and public concern with venting activities, NMED's approval of the Temporary Authorization has not occurred. The FTWCs project requires additional time to resolve safety questions and secure approval of the Temporary Authorization from NMED to proceed. It is highly likely that Triad will not meet this milestone date of September 29, 2021, which was approved in the FY19 Annual STP update. Hence, Triad is proposing to extend the milestone to September 29, 2023.

Current compliance date: September 29, 2021

Proposed Revision 31.0 compliance date: September 29, 2023

No other changes to the schedule in the CP of the STP are proposed.

6.0 DETAILED DESCRIPTION OF THE PROPOSED REVISION

The purpose of this revision request is to reflect changes in the STP inventories in the LANL CP of the STP in accordance with FFCO Section X.C.2.a. The changes proposed by this revision to the CP will allow the added covered wastes to be treated or otherwise managed in accordance with the Activities and Compliance Dates pertaining to each treatability group, as adopted or revised herein. The CP text changes are indicated in the redlined version provided to NMED.

The requested milestone extension for the FTWCs is based on the proposed activities for the four FTWCs that are described in the "Withdrawal and Resubmittal of a Temporary Authorization Request for Waste Treatment, Storage and Repackaging, Los Alamos National Laboratory Hazardous Waste Facility Permit, EPA ID# NM0890010515," LA-UR-20-22103, submitted to NMED on March 9, 2020. NMED has not approved, due to public concern, the process expressed within the Temporary Authorization.

The requested milestone extension for the compressed gasses requiring scrubbing is based on time constraints and the minimal number of essential workers on-site during this COVID-19 pandemic.

The Respondents would like to propose to clarify the notification time requirement from the existing language in the STP report, currently stated as 45 days, to a proposed change of 45 "working" days. If approved, this change will be added consistently throughout the STP report.

6.1 Addition of New Covered Waste

Respondents are requesting that the following waste be added to the STP as covered waste.

6.1.1 MLLW Additions

The total volume of MLLW requested for addition as “new covered” is 2.553 m³ (Table 6.1.1-1).

Table 6.1.1-1 Proposed Addition of New Covered MLLW

CP Section	MWIR ¹ Waste ID	Treatability Group	Volume (m ³)
3.1.5	LA-W922	Noncombustible Debris	0.057
3.3.4	LA-W935	10–100 nCi/g Waste (N3B)	2.496
Total			2.553

¹MWIR is Mixed Waste Inventory Report.

6.1.2 MTRU Waste Additions

The volume of new covered MTRU waste requested for addition is 67.390 m³ (Table 6.1.2-1). Table 6.1.2-2 identifies waste that is proposed for addition following activities that identified waste in the TRU inventory as MTRU either through review of waste characteristics or as a result of identifying potentially hazardous constituents during repacking TRU waste.

Table 6.1.2-1 Proposed Addition of New Covered MTRU Waste at TA-54, TA-55, CMR, and TWF

CP Section	Treatability Group	Volume (m ³)
4.0	TA-54 Cemented Sludge Waste	24.244
4.0	TA-54 Combustible-Noncombustible Waste	4.186
4.0	TA-54 Noncombustible Waste	5.824
4.0	TA-54 Solidified Inorganic Noncombustible Waste	1.288
Total TA-54 New Covered Waste		35.542
4.0	TA-55, CMR & TWF Combustible-Noncombustible Waste	31.224
4.0	TA-55 Combustible Waste	0.208
4.0	TA-55 Noncombustible Waste	0.416
Total Triad TA-55/CMR/TWF New Covered Waste		31.848
Total New Covered Waste		67.390

Table 6.1.2-2 Proposed Addition of Waste Newly Characterized as MTRU

CP Section	Treatability Group	Volume (m ³)
4.0	Combustible-Noncombustible Waste (identification of potentially hazardous constituents based on investigation of characterization of TRU nitrate salt waste, debris containers with aerosol cans, and empty containers not meeting the RCRA empty criteria.)	0.000
4.0	Solidified Inorganic and Organic Waste (identification of potentially hazardous constituents based on investigation and characterization of TRU nitrate salt waste, cemented containers with free liquids, and empty containers not meeting the RCRA empty criteria.)	0.000
Total Newly Characterized MTRU		0.000

6.2 Deletion of Covered Waste

MLLW is shipped off-site for treatment and/or disposal, recycling, or are otherwise proposed as deleted waste. MTRU is shipped to WIPP for disposal.

6.2.1 Deletion of MLLW

Respondents are requesting that the covered MLLW identified in Appendix B be deleted from the STP. These covered wastes were shipped off-site for treatment and disposal or recycling. The total volume of covered MLLW that is requested for deletion under this revision to the CP is 56.640 m³ (Appendix B, Table B-1).

6.2.2 Deletion of MTRU Waste

Respondents are requesting that the covered MTRU waste identified in Appendix F be deleted from the STP. These covered wastes from N3B and Triad were shipped off-site to WIPP for disposal. The total volume of STP MTRU that is requested for deletion from inventory under this revision to the CP is 172.270 m³ (Appendix F, Table F-1).

6.2.3 Other Deletions of FY20 Waste

No waste is proposed for deletion due to recycling or on-site treatment in FY20. No waste was shipped off-site for treatability studies.

6.3 Adjustments to the Original (October 4, 1995) STP-Covered MLLW Inventory

Respondents are requesting adjustments to the original (October 4, 1995) STP-covered MLLW inventory as listed in Appendix C (Table C-1). Most administrative adjustments are due to reclassification of MTRU waste to MLLW treatability groups and to quality control activities related to preparing waste for treatment and disposal. These adjustments may result in additions of newly identified covered waste or transfers of waste to other treatability groups.

6.4 Adjustments to MTRU Waste Inventory

Respondents are requesting adjustments (Appendix G, Tables G-1, G-2, and G-3) to the original (October 4, 1995) STP-covered MTRU waste inventory. Most administrative adjustments are due to reclassification of MTRU waste to MLLW treatability groups or to other MTRU treatability groups and to reclassification of TRU to MTRU as a result of quality control activities related to preparing waste for treatment and disposal. These adjustments may result in additions of newly identified covered waste or transfers of waste to other treatability groups.

6.5 Establishment of New Milestone Activity Dates

Respondents are requesting new compliance milestones.

6.6 Additional Revisions

No other revisions are requested.

7.0 RATIONALE FOR THE PROPOSED REVISION

This information is provided in accordance with FFCO Section X.C.2.a.

7.1 Establishment of New Proposed Milestone

The newly proposed compliance dates by which DOE/Triad expect to complete the treatment and disposal of the FTWCs [Activity Table 3.2-3(A)] and the transfer of the last CVD to CMR for material retrieval [Activity Table 4.0-2(B)] are September 29, 2021 and October 31, 2021, respectively. After review of the FY19, Revision 30.0, Annual Site Treatment Report, NMED approved these proposed compliance dates on September 22, 2020. The CVD milestone has been completed and will be removed from future STP reports.

7.2 Addition of New Covered Waste

Waste that was newly generated in FY19, which was not treated within 12 months of generation, became new covered waste during FY20. In addition, TRU wastes, re-evaluated during repacking and quality control activities as having previously unidentified RCRA constituents, were also added to the STP inventory (Appendix G). Approval of these proposed additions to the STP inventory will allow the added covered wastes to be treated or otherwise managed in accordance with the activities and compliance dates pertaining to each treatability group, as adopted or revised herein.

7.3 Deletion of Covered Waste

Decreases in covered waste inventory reflect the treatment and disposal or recycling of covered waste at off-site commercial facilities during FY20. Deletion of this covered waste is proposed to more accurately reflect the LANL STP inventory as of the end of FY20.

7.4 Adjustments to the Original (October 4, 1995) STP-Covered Waste Inventory

Administrative adjustments result from quality control activities related to preparing waste for treatment and disposal. These adjustments result in additions of newly identified covered waste and transfers of waste to other treatability groups. The adjustments to the original (October 4, 1995) STP-covered waste inventory are proposed to more accurately reflect the LANL STP inventory as of the end of FY20.

8.0 ANTICIPATED LENGTH OF ANY DELAY IN PERFORMANCE

In accordance with FFCO Section X.C.2.c, Respondents cannot confidently predict the anticipated delay in performance for shipping covered STP MTRU waste for which the only currently allowed deletion pathway is disposal at WIPP.

9.0 PLAN AND SCHEDULE FOR IMPLEMENTING ALL REASONABLE MEASURES

All other measures proposed could be implemented within the framework of the existing plan and schedule for the STP (FFCO Section X.C.2.d).

PART III COMPLIANCE PLAN – PROPOSED REVISION 31.0

1.0 PURPOSE AND SCOPE OF THE COMPLIANCE PLAN

1.1 Introduction

Part III of this document identifies changes that require NMED approval as a revision under Section X, *Revisions*, or an amendment under Section XI, *Other Amendments to the STP*.

The CP includes a schedule for off-site transportation for treatment, or completion of parallel options as defined in each Treatability Group Section, and the treatment of mixed wastes in full compliance with the HWA and the implementing regulations at 20 New Mexico Administrative Code (NMAC) 4.1, that incorporates by reference 40 CFR Parts 260 through 270. Part I, Background, contains progress reports as required in the FFCO. Respondents shall carry out the activities described in the STP, including the CP, in accordance with the schedules and requirements set forth in the STP and the FFCO.

1.2 STP Revisions and Amendments

The STP CP has been modified several times since it was originally issued, in accordance with the provisions of Section X, *Revisions*, and Section XI, *Other Amendments to the STP*, of the October 4, 1995, FFCO, as amended and revised. The history of revisions is provided in Appendix J.

2.0 COMPLIANCE SCHEDULES

The STP provides overall schedules for achieving compliance with LDR storage and treatment requirements for mixed waste at LANL. The schedules include those activities required to process backlogged and currently generated waste and include schedules required to establish an overall timeframe for achieving compliance with the LDR requirements under the HWA and 20 NMAC 4.1.

2.1 Categories of Activities for Compliance Dates

The categories of activities for which compliance dates will be provided for different types of treatment approaches in the STP are listed in the tables below. The categories of activities are based on Section 3021(b)(1)(B)(i), (ii), and (iii) of the RCRA, to the extent appropriate.

2.1.1 Plans Where Treatment Technology Exists

For most of the mixed waste, treatment technologies were identified and developed. For the waste that will be treated on-site, the categories of activities for compliance dates identified in Table 2.1.1-1 shall apply.

Table 2.1.1-1 Categories of Activities for Compliance for Mixed Waste with Existing Treatment Technologies

A.	Submit permit applications to NMED.
B.	Initiate construction as specified in the NMED permit.
C.	Complete system testing and commence operation.
D.	Begin treating mixed waste.
E.	Complete treatment of existing wastes to applicable regulatory standards.

2.1.2 Plans Where Technology Must Be Developed

For some mixed waste, no treatment technologies were identified and developed, or the treatment technology must be modified or adapted to apply to such waste. For the waste that will be treated on-site, the categories of activities for compliance dates are identified in Table 2.1.2-1 and shall apply.

Table 2.1.2-1 Categories of Activities for Compliance Dates for Mixed Waste Without Existing Treatment Technologies

A.	Identify and develop technology.
B.	Submit permit application to NMED; or
C.	Submit a Notification of Intent to perform treatability study to NMED a minimum of 45 working days prior to commencement of the study.
D.	Initiate construction as specified in the NMED permit.
E.	Commence systems testing.
F.	Begin treating mixed waste.
G.	Complete treatment of existing wastes to applicable regulatory standards.

2.2 Primary Preferred Treatment

Off-site treatment at a commercial or noncommercial mixed waste treatment facility is the primary preferred treatment option applicable to all mixed waste streams in the STP inventory unless otherwise indicated in the descriptions of individual waste treatability groups. DOE may also pursue parallel treatment options, such as recycling/re-use or radiological decontamination. Requirements for waste shipped off-site for recycling are discussed under Part III, Section 2.6. All activities and compliance dates related to the construction, permitting, and operation of on-site treatment skids were removed from this

document. This change was due to the increased availability of off-site treatment and disposal capacity for mixed waste. Respondents will continue evaluating new commercial and DOE off-site treatment facilities as potential options for managing mixed waste, as they become available.

2.3 Plans for Mixed Waste to be Shipped Off-site for Treatment

Should Respondents decide to treat or recycle waste at a commercial off-site facility (Table 2.3-1), Respondents will notify the NMED STP Manager in writing as soon as possible and in any event within 45 working days of receipt of waste at the treatment/recycling facility.

Table 2.3-1 Activities for Off-site Shipment for Treatment or Recycling at a Commercial Facility

A.	Meet all regulatory requirements for shipment.
B.	Provide documentation to NMED that waste has been received at an off-site facility for treatment or recycling within 45 working days of receipt of waste at the treatment facility.

DOE shall notify the NMED STP Manager in writing as soon as possible if mixed waste is planned to be sent to a noncommercial facility. Notification should be made if possible when DOE is first considering such an option to allow NMED and the state to address any state issues or concerns with other states. The NMED STP Manager shall approve in writing the proposed off-site noncommercial treatment option proposed by DOE prior to any shipment by DOE. DOE will notify the NMED STP Manager in writing as soon as possible and in any event within 45 working days of receipt of waste at the treatment/recycling facility. Activities for mixed waste to be shipped off-site for treatment/recycling at a noncommercial facility are identified in Table 2.3-2.

Table 2.3-2 Activities for Shipment Off-site for Treatment or Recycling at a Noncommercial Facility

A.	Request necessary approval from NMED for shipment of waste by category before shipping.
B.	Meet all regulatory requirements for off-site shipment.
C.	Provide documentation to NMED of confirmation of shipment date within 14 working days prior to sending waste to an off-site facility for treatment, or recycling, or storage pending treatment, or recycling.
D.	Provide documentation to NMED that waste has been received at an off-site facility for treatment within 45 working days of receipt of waste at the off-site facility.
E.	Meet all regulatory requirements to include RCRA Permit modifications for residual or newly generated waste streams after treatment or recycling.
F.	Provide documentation to NMED within 30 working days after receipt of residual or newly generated waste streams upon return to LANL.

2.3.1 Specific Site Requirements for Noncommercial Treatment Facilities

Shipment to Idaho National Laboratory

Prior to shipment, Idaho National Laboratory (INL) and Idaho Division of Environmental Quality shall be notified of any pending shipments of waste should DOE ship MLLW to INL. Proper procedures including additional approvals (if necessary) and documentation shall be completed prior to the shipment of wastes to INL. Management of post-treatment waste residuals or newly generated waste streams will be in accordance with the requirements of DOE, the State of Idaho, and that state where they will be disposed. A modification to LANL's RCRA permit providing for the return of such wastes and/or residues to LANL must be approved by NMED prior to any such return of wastes and/or residuals to LANL. DOE will notify the NMED Project Manager in writing as soon as possible and in any event within 30 working days after receipt of shipment of treatment residuals or newly generated waste streams from INL.

Shipments of MLLW to planned facilities (not yet existing) will occur only after treatment and schedules are approved by the DOE Idaho Field Office and the State of Idaho. Upon approval of the planned

treatment facilities, the applicable protocol from the paragraph above will be implemented for mixed wastes to be treated at planned facilities.

Shipment to Oak Ridge Reservation

If Oak Ridge Reservation cannot dispose of mixed-waste residues or new waste streams generated from off-site treatment, and they cannot be sent to another facility for disposal, then the residues may return to LANL. Should residual or newly generated waste streams be returned to LANL, the proper permits for the State of New Mexico must exist. DOE will notify the NMED Project Manager in writing as soon as possible and in any event within 30 working days after receipt of shipment of treatment residuals or newly generated waste streams from the Oak Ridge Reservation.

2.4 Requirements Pertaining to Radionuclide Separation

The FFCA sets additional requirements in cases where DOE intends to conduct radionuclide separation of mixed waste. Should DOE determine to do radionuclide separation of such mixed waste, DOE will schedule specific compliance dates based on category activities identified in Table 2.4-1. “Radionuclide separation” shall mean segregating the radioactive portion of the mixed waste from the hazardous portion of the mixed waste.

Table 2.4-1 Activities for Radionuclide Separation

A.	Complete an estimate of the volume of waste generated by each case of radionuclide separation.
B.	Complete an estimate of the volume of waste that would exist or be generated without radionuclide separation.
C.	Complete an estimate of the costs of waste treatment and disposal if radionuclide separation is used compared with the estimated costs if it is not used.
D.	Provide the assumptions underlying such estimates of waste volumes and cost estimates.
E.	Provide characterization methodologies for determining waste type.
F.	Submit a plan for treating or managing hazardous waste residues, accompanied by an NMED permit application.

2.5 Plans Related to Other Mixed Waste Activities

Activities other than the types of activities specifically called for in the FFCA as requiring schedules are described in this STP. Some of these activities may be associated with schedules that may contain compliance dates related to treatment of DOE’s mixed waste.

For mixed waste, which is not sufficiently characterized to allow identification of appropriate treatment, notification of the characterization of such waste shall be in accordance with the annual update process described in the FFCO. If such characterization results in the addition or deletion of a treatability group or an increase in volume in a treatability group, a revision would be required pursuant to Section X of the FFCO.

Respondents will notify NMED when off-site treatability studies are conducted on STP waste. Treatability studies are used to explore alternative treatment options that may be practical for any or all of the STP mixed waste streams. When preparing waste for shipment for an off-site treatability study, Respondents will evaluate the potential for incidental waste treatment or secondary waste generation, which are often associated with treatability studies.

2.6 Recycling/Re-Use

Respondents will pursue on-site or off-site recycling/re-use as a parallel preferred option.

Should DOE elect to use recycling facilities in lieu of (or in combination with) treatment, it will follow requirements as if the waste were shipped off-site for treatment. Any and all requirements by the

recycling facility and all state, federal, or other regulatory requirements applicable at the recycling site shall be met by Respondents.

Respondents shall notify the NMED STP Manager in writing as soon as possible if mixed waste is planned to be sent to an off-site noncommercial recycling facility. Notification should be made if possible when DOE is first considering such an option to allow NMED and the state to address any state issues or concerns with other states. The NMED STP Manager shall approve in writing the proposed off-site noncommercial recycling option prior to any shipment by Respondents. Respondents will notify the NMED STP Manager in writing as soon as possible and in any event within 45 working days of receipt of waste at the recycling facility. Activities for mixed waste to be recycled are identified in Table 2.6-1.

Table 2.6-1 Requirements for Recycling

A.	Meet all regulatory requirements for recycling/re-use.
B.	Provide documentation to NMED that waste has been received within 45 working days of receipt of waste at the recycling facility.

Should DOE elect to use recycling/re-use facilities in lieu of (or in combination with) treatment, it will follow the requirements as if the waste were shipped off-site for treatment. Respondents will submit a notification letter to NMED within 45 working days, in place of documentation, that waste was received at a recycling facility.

2.7 Onsite Radiological Decontamination

Respondents will pursue on-site radiological surface or external decontamination as a preferred option. No volumetric or internal decontamination processes will be considered or performed. Surface radiological decontamination includes activities such as sand blasting, hand-scrubbing, or electrolytic decontamination. These decontamination activities could result in reducing or removing the radiological contaminant from the waste such that the waste could be recycled in accordance with CP Section 2.6 *Recycling/Re-Use* or be proposed for deletion in accordance with Section IX *Deletion of Waste* of the FFCO.

Activities for mixed waste to be radiologically decontaminated are identified in Table 2.7-1.

Table 2.7-1 Activities for Radiological Decontamination

A.	Meet all DOE requirements for radiological decontamination.
B.	Provide documentation to NMED that waste has been received within 45 working days of receipt of waste at the recycling facility; or
C.	Propose waste for deletion in accordance with Section IX of the FFCO.

3.0 MIXED LOW-LEVEL WASTE STREAMS

This section presents the preferred options to treat MLLW at LANL. Options not described below must be approved by NMED in accordance with the revision process pursuant to the FFCO.

The original October 4, 1995, STP inventory in each MLLW treatability group was modified through the revision process in the FFCO. The tables in the STP Background (Part I) Appendices A–M of the FY09 STP Annual Update provide a comprehensive summary of changes to the CP covered waste inventories (additions, deletions, and shifts of waste between treatability groups) occurring as of the date of that revision. In Part III, the original STP inventory in each MLLW treatability group is denoted as subgroup 0 of that treatability group (e.g., the original volume of STP treatability group LA-W906 became LA-W906-0). Each revision that has since added volumes to individual treatability groups has resulted in

creation of an additional subgroup, having the same number as the revision (e.g., LA-W906-4 was created in Revision 4.0, and LA-W906-5 was created in Revision 5.0).

In most subsections of this section, the subgroups of the treatability groups are not shown. In those cases, the Activities and Compliance Dates are applicable to the entire net volume of that treatability group. However, when subgroups of a treatability group were assigned Activities and Compliance Dates unique to that subgroup, those subgroups are detailed in the text. Activities and Compliance Dates that were met in previous years are not shown in this document.

3.1 Mixed Waste Streams

The following subsections summarize MLLW treatability groups.

3.1.1 Industrial Isopropyl Alcohol (IPA) Wastes and Scintillation Fluids

Table 3.1.1-1 Treatability Groups for IPA Wastes and Scintillation Fluids

Treatability Group	MWIR* Waste ID	RCRA Codes	Net Volume (m ³)
IPA Wastes	LA-W901	D001, D009, F002, F003, F005	0.000
Scintillation Fluids	LA-W902	D001, F003, F005	0.000
Totals			0.000

*MWIR is Mixed Waste Inventory Report.

Treatment: The waste will be treated at an off-site facility that combusts organic liquid waste.

3.1.2 Lead Blankets, Soil with Heavy Metals, Environmental Restoration (ER) Soils

Table 3.1.2-1 Treatability Groups for Lead Blankets, Soil with Heavy Metals, ER Soils

Treatability Group	MWIR* Waste ID	RCRA Codes	Net Volume (m ³)

Table 3.2-3 Activities and Compliance Dates for Wastes Requiring Characterization or Assessment

Activity	Compliance Dates
A. Complete shipping of wastes to an off-site treatment facility, or submit documentation assigning waste items to applicable treatability groups or complete parallel option.	September 29, 2023
B. Provide documentation to NMED that waste was received at off-site facility or provide notification of parallel option.	Within 45 working days of receipt of waste at off-site facility or within 45 working days after completion of parallel option.

LANL’s inventory of *High Activity Waste* consists of five containers with a combined volume of 1.477 m³.

Triad is proposing a compliance date extension from September 29, 2021, to September 29, 2023, based on the proposed activities for the four FTWCs that are described in the “Temporary Authorization Request Waste Treatment, Storage and Repackaging of Flanged Tritium Waste Containers,” LA-UR-20-22103, submitted to NMED on March 9, 2020 (Refer to Part II, Section 5.0). The justification for the extension of Activity 3.2 – specifically LA-W934 High Activity Waste, is that the four FTWCs require treatment by venting, storage, sorting, segregation, and repackaging and these activities are currently in the final planning and scheduling phases. The fifth container of mercury- and tritium-contaminated cryotrap, originating from experimental activities at the Ion Beam Facility, is presently situated at TA-54, Area G. Because of the presence of elemental mercury, sorting and segregation as described in the technical area is not appropriate for this waste. As this waste is also under the same compliance date of September 29, 2021, this container will require further discussion and planning toward options for a path forward, which has not been acted on to date. Currently, NMED has not approved the Temporary Authorization, due to schedule delays associated with the COVID-19 pandemic and public concerns. Therefore, LANL will not meet the September 29, 2021, milestone for the remaining *High Activity Waste*. DOE/Triad continues to diligently pursue all possible options to ship the waste off-site prior to the milestone for the remaining five containers (tritium traps with mercury contamination and the molecular sieves and squib assemblies containing lead with very high tritium). The containers were originally planned for transport off-site to a commercial treatment facility using a 10-160B shipping cask, but this option has been determined not to be viable. Options for shipment and disposal of these waste items are being reassessed by a multidisciplinary team, with the first priority being to ensure continued stable, safe storage on-site in the meantime.

3.3 Plans for Other Types of Activities

The following subsection summarizes plans for other types of activities:

3.3.1 Lead Decontamination

Table 3.3.1-1 Treatability Groups for Lead Decontamination

Treatability Group	MWIR* Waste ID	First Category	Second Category	Totals
		Net Volume (m ³)	Net Volume (m ³)	Net Volume (m ³)
Lead For Surface Decontamination	LA-W930-0	0.000	0.000	0.000
	LA-W930-5			
Totals		0.000	0.000	0.000

*MWIR is Mixed Waste Inventory Report.

Treatment: Any lead not acceptable for on-site or off-site lead decontamination, and any lead unsuccessfully decontaminated, will be designated in the following two categories: (1) for treatment and disposal at an off-site facility or (2) for recycle through an off-site capability, such as metal melting to create shielding blocks or a DOE lead bank. Non-conforming items will be reassigned to appropriate treatability groups in accordance with the FFCO.

Table 3.3.1-2 Additional Wastes for Lead Decontamination

Lead Requiring Sorting	LA-W931	D008	0.000
Totals			0.000

*MWIR is Mixed Waste Inventory Report.

Treatment: Wastes in this treatability group will require different treatment processes. Drums will be opened, the contents removed, and the waste repackaged based on appropriate treatment requirements. Wastes in this treatability group are primarily lead pieces, lead shot, and lead-contaminated soils that were packaged in the same drum.

The wastes will be reclassified as the applicable treatability group after physical separation and repackaging. The wastes will be treated by appropriate technology.

3.3.4 10–100 nCi/g Waste

Table 3.3.4-1 Treatability Groups for 10–100 nCi/g Waste

Totals			186.048

*MWIR is Mixed Waste Inventory Report.

Treatment: Wastes in this treatability group consist of a population of legacy drums packaged and managed as MTRU (>100 nCi/g) but, after assay, were determined to be MLLW (<100 nCi/g). Once confirmed, these drums are segregated from other TRU waste and stored in a designated MLLW storage area. Waste Profiles are prepared to allow acceptance into the LLW population, and drums are relabeled appropriately and reclassified from TRU to MLLW in the database.

When a parent waste container is remediated, the waste contents are removed, WIPP waste acceptance criteria prohibited items are addressed, and the remaining waste is placed into one or more new containers. After this process is complete, the original parent waste container remains radiologically contaminated and usually can be managed as LLW. Empty containers are being managed as “RCRA empty” containers if they meet the “RCRA empty” criteria in 40 CFR 261.7. Empty containers that have lead liners must carry an EPA hazardous waste number (HWN) for lead (D008), and be managed as MLLW. If after real-time radiography assay, empty containers are found to still contain residual amounts of waste material that do not meet the “RCRA empty” criteria, the containers are to be labeled with the

EPA HWN assigned to the original parent container, as indicated by the parent’s waste stream profile (in addition to D008, if the D008 HWN is added to the empty parent only because of the presence of a lead liner).

The MLLW drums are prepared for treatment and disposal to an off-site facility using LANL generator acceptable knowledge documentation and real-time radiography and non-destructive assay data. Restrictions imposed in 2015 for movements of LA-W935 waste at TA-54, Area G, were lifted in FY18. Past issues with the Area G Safety Basis were analyzed and corrected.

Table 3.3.4-2 Activities and Compliance Dates for 10–100 nCi/g Waste

Activity	Compliance Dates
A. Complete radiological characterization.	September 30, 2022
B. Complete shipment of existing waste to off-site facility for treatment, or complete parallel options.	September 30, 2022
C. Provide documentation to NMED that waste was received at off-site facility or provide notification of parallel option.	Within 45 working days of receipt of waste at treatment facility or within 45 working days after completion of parallel option.

The estimated waste volumes will be subtracted from the MTRU STP inventory and added to the MLLW STP inventory as the waste is reclassified as MLLW. However, because of the repacking process, the apparent volume of waste will reflect the number of additional containers needed to repackage the waste into compliant configurations for transportation and disposal. Empty TRU containers, which includes a population of empty TRU parent containers that previously contained nitrate salts will also undergo recharacterization and may be reclassified as LLW or if determined to not meet the definition of RCRA-empty, reclassified as MLLW.

The recharacterization process resumed in FY16 for waste to be accepted at off-site treatment and disposal facilities, and will continue to produce 10-100 nCi/g Waste (LA-W935). In 2018, N3B took over the operational responsibility of TA-54. Operational start-up included purchasing and installing treatment equipment and repairing existing deficiencies.

3.4 Management of “Missing” Items

Table 3.4-1 Waste Category for “Missing Waste”

Category	MWIR* Waste ID	Container ID	Net Volume (m ³)
Missing/Nonexistent/To be verified (TBV)			0.000
Totals			0.000

*MWIR is Mixed Waste Inventory Report.

Treatment: During visual inspections and sampling activities in support of STP waste work-off, occasionally an item cannot be found, or it is not located in the expected containers, according to the LANL data files for the waste item. In some instances, such items cannot be verified as having been received in storage at LANL, and follow-up investigations of the record files reveal that although the items were included in the original STP inventory, the waste items were never generated.

Some waste items were determined not to exist after visual inspection and document review. When Respondents determine that an STP-covered waste item does not exist, transfer of the item to the category called “Missing/nonexistent/TBV (to be verified)” is requested through this revision Annual Update.

If, at any time, any of these items is discovered in the inventory, NMED would be notified and approval would be requested for assignment of the rediscovered items to the appropriate treatability group. If necessary, discovered items would be assigned new Activities and Compliance Dates in accordance with the terms of the FFCO.

4.0 MIXED TRANSURANIC WASTE

Treatment Group(s): Assorted MTRU Waste

Off-site Disposal: MTRU waste at LANL will be shipped for disposal at WIPP, located in Carlsbad, New Mexico.

Disposal: Waste volumes listed in Appendix E, Table E-3, constitute the remaining original population of the Framework Agreement of “non-cemented above-ground EM Legacy TRU” and “above-ground cemented EM Legacy TRU” that is MTRU waste only. Volume adjustments noted in Appendix G, Table G-3, are due to corrections of database entries, treatability group, EPA codes, overpacks removed/added, containers repacked and shipped/held for waste items identified as the non-cemented and cemented above-ground EM Legacy TRU for MTRU STP waste.

Table 4.0-1 Activities and Compliance Dates for MTRU Inventory at TA-54 and TA-55

Activity	Compliance Dates
A. Complete transfer of existing waste (excluding Metallic Waste) to, WCRRF, or WIPP (TA-54)	November 30, 2022
B. Complete transfer of Metallic Waste (CVD) from TA-55 to CMR for material retrieval (This activity has been completed as of September 22, 2020, and will be removed from the FY21 STP Annual Report)	October 31, 2021

Transfer of Covered MTRU Inventory: The FY20 reported waste volume for STP-covered MTRU inventory is 1573.816 m³ (Table 2.2-1 in Part 1). As part of the CVD Project, which was formerly referred to as the Bolas Grande Project, Triad transferred the last (tenth) CVD from TA-55 to the CMR on September 23, 2020. This met the STP milestone, FY19 Annual Update Site Treatment Plan, Revision 30.0 Table 4.0-2 (B), “Complete transfer of Metallic Waste (CVD) to CMR for material retrieval,” compliance date of October 31, 2021. This transfer of the CVD allows Triad to remove the volume (3.199 m³) from the FY20 STP as it is no longer waste. It is now considered as material for the recovery project.

Site Treatment Plan, Rev. 30.0 Table 4.0-2 (B), “Complete transfer of Metallic Waste (CVD) to CMR for material retrieval”, compliance date of October 31, 2021. This transfer of the CVD allows Triad to remove the volume (3.199 m³) from the FY20 STP as it is no longer waste. It is now considered as material for the recovery project.

In FY20, the remaining 216.953 m³ (Appendix E-2) of the covered MTRU waste inventory at TA-55, CMR, and TWF will not be transferred to TA-54. It will be either shipped directly from TA-55 or transported to the Radioassay and Nondestructive Testing (RANT) facility for shipment to WIPP.

The de-inventory of TA-54’s MTRU waste will take multiple years. A milestone extension request to November 30, 2022, was proposed as shown in Table 4.0-1 (A). A subset of the covered MTRU waste inventory will require management at the Waste Characterization, Reduction, and Repacking Facility (WCRRF) as the waste acceptance criteria for WIPP has changed since the waste was generated. WCRRF will not receive waste until it has implemented corrective actions as directed by the DOE’s Accident Investigation Board, including updating its Safety Basis documents. DOE EM manages TA-54. DOE EM

stated that TA-54 will not receive any programmatic newly generated waste. The LANL Hazardous Waste Permit specifies that MTRU waste generated prior to April 21, 2011, cannot be stored at the TWF. In addition, WIPP is expected to receive a limited number of waste shipments per week. Respondents resumed shipment of MTRU waste in October 2018.

4.1 Management of “Missing” Items

Table 4.1-2 Waste Category for “Missing Waste”

Category	Treatability Groups	Net Volume (m ³)
<i>Missing/Nonexistent/TBV</i>	<i>Cemented Sludge</i>	0.000
	<i>Combustible-Noncombustible Waste</i>	0.000
	<i>Combustible Waste</i>	0.000
Totals		0.000

Treatment: During visual inspections in support of STP waste work-off, occasionally an item cannot be found, or it is not located in the expected containers, according to the LANL data files for the waste item. In some instances, such items cannot be verified as having been received in storage at LANL, and follow-up investigations of the record files reveal that although the items were included in the original STP inventory, the waste items were never generated.

Some items were determined not to exist after visual inspection and document review. When Respondents determine that an STP-covered waste item does not exist, transfer of the item to the category called “Missing/nonexistent/TBV” is requested through this revision Annual Update.

If, at any time, any of these items is discovered in the inventory, NMED would be notified and approval requested for assignment of the rediscovered items to the appropriate treatability group.

APPENDIX H MLLW TREATMENT FACILITIES

Table H-1 Commercial Facilities Contacted for Waste Treatment Capabilities

Commercial Facility	Location
<p>Perma-Fix (including Material & Energy Corporation in Tennessee; Diversified Scientific Services, Inc. in Tennessee; and Perma-Fix North West in Washington; and Perma-Fix Florida in Gainesville, Florida)</p> <p>Perma-Fix has permitted treatment facilities for the treatment of low-level radioactive and low-level mixed waste. The facilities can perform to include thermal treatment, compaction, macroencapsulation, neutralization, and stabilization. All are licensed within their respective State of location under the Nuclear Regulatory Commission regulations and permitted under the RCRA regulations</p>	<p>Florida, Washington and Tennessee</p>
<p>Waste Control Specialists (WCS)</p> <p>WCS, located in Andrews, Texas, is a permitted treatment facility for the treatment and disposal of LLW and MLLW. The site has regulatory authorization for industrial solid waste and hazardous waste storage, processing, and land disposal under RCRA permit # HW-50358 granted by the state of Texas. EPA has authorized the site for treatment, storage, and land disposal of Toxic Substances Control Act (TSCA) wastes (TXD988088464). The facility can process waste that requires compaction, microencapsulation, macroencapsulation, neutralization, deactivation, chemical oxidation, chemical reduction and stabilization.</p>	<p>Texas</p>
<p>Energy Solutions of Utah (including Bear Creek Operations in Tennessee)</p> <p>Energy Solutions, located in Clive, Utah, is a permitted treatment facility for the treatment and disposal of LLW and MLLW. The site houses both a low-level radioactive waste treatment facility and a low-level mixed waste treatment facility, which are licensed under state of Utah Department of Environmental Quality, License Number UT2300249 and by the EPA hazardous waste permit number UT0982598898.</p>	<p>Utah</p>
<p>Nuclear Fuel Services</p>	<p>Tennessee</p>
<p>Integrated Environmental Services</p>	<p>Tennessee</p>
<p>NSSI</p>	<p>Texas</p>

APPENDIX J HISTORY OF CHANGES TO THE CP AND FFCO

As discussed in Part III (CP), Section 1.2, the STP CP has been modified several times since it was originally issued, in accordance with the provisions of Section X, *Revisions*, and Section XI, *Other Amendments to the STP*, of the October 4, 1995, FFCO, as amended and revised. This appendix provides a summary of these CP changes and of modifications to the FFCO since its issuance.

To date, there have been 30 revisions, revision 31.0 is pending NMED approval, and three amendments to the CP. In addition, the FFCO was amended once on May 20, 1997. Table J-1 provides a summary of these changes. More detailed descriptions can be found in the CP Update portion of each year's STP *Annual Update* and the original correspondence requesting each change.

Table J-1 Summary of Changes to the CP and the FFCO

Action	Document Modified	Effective Date	Effect on FFCO/STP
Rev. 1.0	STP/CP	6/12/96	Added off-site treatment as a parallel preferred option for most MLLW treatability groups.
Rev. 2.0	STP/CP	12/9/96	Reduced volume of LA-W928 by approving reclassification of sludge as LLW.
Amendment 1.0	STP/CP	10/30/96	Divided original volume of LA-W929 into three subgroups, and added new Activities and Compliance Dates.
Rev. 3.0	STP/CP	1/27/97	Divided original volume of LA-W929 into three subgroups, and added new Activities and Compliance Dates.
Amendment 1.0	FFCO	5/20/97	Modified FFCO Sections IV, V, IX, and X to streamline waste transfers and deletions.
Amendment 2.0	STP/CP	9/4/97	Extended CP Activity 3.1.2B Compliance Date to 12/29/97.
Rev. 4.0	STP/CP	12/29/97	Transferred original volume of LA-W929 from three subgroups to other treatability groups, added treatability groups, and deleted treated items.
Rev. 5.0	STP/CP	12/29/97	Added volumes reported in FY95 and FY96 <i>Annual Updates</i> (and certain other items) to several treatability groups, added Activities and Compliance Dates, added CP Appendices, and deleted treated items.
Rev. 6.0	STP/CP	7/31/98	Added volumes reported in FY97 <i>Annual Update</i> to several treatability groups, added certain Activities and Compliance Dates, adjusted several original inventory volumes, transferred one LA-W929 item to a new treatability group, and deleted treated items.
Rev. 7.0	STP/CP	11/30/98	Removed on-site treatment skids, added STP inventory items, added on-site recycling/re-use and radiological decontamination, added notification for off-site treatability studies.
Rev. 8.0	STP/CP	12/3/98	Extended compliance dates for treatment of MTRU waste.
Rev. 9.0	STP/CP	6/7/00	Added and deleted volumes reported in FY98 <i>Annual Update</i> to certain treatability groups.
Amendment 3.0	STP/CP	8/30/99	Transferred three items to MTRU, transferred one item to subgroup within same treatability group.
Rev. 10.0	STP/CP	12/18/00	Added and deleted volumes reported in FY99 <i>Annual Update</i> to certain treatability groups.
Rev. 11.0	STP/CP	4/18/01	Added and deleted volumes reported in FY00 <i>Annual Update</i> .

Table J-1 (continued)

Action	Document Modified	Effective Date	Effect on FFCO/STP
Rev. 12.0	STP/CP	3/13/02	Added and deleted volumes reported in FY01 <i>Annual Update</i> . Extended CP Activity 3.1.5A Compliance Date to 8/25/03. Extended CP Activity 3.1.11A to 2/01/04. Removed the requirement to develop treatment technologies and the associated compliance schedule in CP Activity 4.0 and added language specifying that MTRU waste would be shipped off-site to WIPP for disposal.
Rev 13.0	STP/CP	7/14/03	Added and deleted volumes reported in FY02 <i>Annual Update</i> .
Rev 14.0	STP/CP	1/5/05	Added and deleted volumes reported in FY03 <i>Annual Update</i> .
Rev 15.0	STP/CP	8/16/05	Added and deleted volumes reported in FY04 <i>Annual Update</i> .
Rev 16.0	STP/CP	12/12/06	Added and deleted volumes reported in FY05 <i>Annual Update</i> . Extended CP Activity 3.1.8(A) Compliance Date to 8/09/07. Extended CP Activity 3.1.9(A) Compliance Date to 8/09/07. Extended CP Activity 3.1.10(A) Compliance Date to 8/31/07. Extended CP Activity 3.1.11(A) Compliance Date to 12/31/07. Extended CP Activity 3.2(J) Compliance Date to 12/31/07. Reclassified 0.2082 m ³ of LA-W934 High Activity MLLW waste to MTRU waste.
Rev 17.0	STP/CP	6/26/08	Added and deleted volumes reported in FY06 <i>Annual Update</i> . Extended CP Activity 3.1.5(A) Compliance Date to 12/31/08. Extended CPV Activity 3.1.8(A) Compliance Date to 8/28/08. Extended CP Activity 3.1.9(A) Compliance Date to 8/28/08. Extended CP Activity 3.2(J) Compliance Date to 12/31/08.
Rev 18.0	STP/CP	1/9/09	Added and deleted volumes reported in FY07 <i>Annual Update</i> . Extended CP Activity 3.1.8(A) Compliance Date to 8/28/09. Extended CP Activity 3.1.9(A) Compliance Date to 8/28/09. Proposed a new Section 3.3.4 for Treatability Group, LA-W935 10–100 nCi/g Waste with new CP Activity 3.3.4 (A) Compliance Date 12/01/13 and CP Activity 3.3.4 (B) Compliance Date 12/31/13. Extended CP Activity 3.2(J) Compliance Date to 12/31/10.
Rev 19.0	STP/CP	2/5/10	Added and deleted volumes reported in FY08 <i>Annual Update</i> . Extended compliance date for CP Activities 3.1.8(A) and 3.1.9(A) to 8/28/12. Proposed a new milestone of 12/31/2010 for 3.1.4(A) and a new milestone 3.3.4(C) for 10–100 nCi/g Waste.
Rev 20.0	STP/CP	11/8/10	Added and deleted volumes reported in FY09 <i>Annual Update</i> . Proposed an extended compliance date for CP Activity 3.2(J).
Rev 21.0	STP/CP	3/21/12	Added and deleted volumes reported in FY10 <i>Annual Update</i> . Proposed new compliance date for CP Activity 3.1.8(A).
Rev 22.0	STP/CP	12/10/12	Added and deleted volumes reported in FY11 <i>Annual Update</i> .
Rev 23.0	STP/CP	08-26-2015	Added and deleted volumes reported in FY12 <i>Annual Update</i> Added Table 4.0-1 Treatability Groups for the Framework Agreement MTRU Waste
Rev 24.0	STP/CP	08-26-2015	Added and deleted volumes reported in FY13 <i>Annual Update</i> Proposed compliance date for CP Activity 3.1.5(A) Proposed compliance date for CP Activity 3.1.8(A) Extended CP Activity 3.2(J) Compliance Date to 6/30/2018 Proposed compliance date for CP Activity 3.3.4 (A and B)
Rev 25.0	STP/CP	TBD	Added and deleted volumes reported in FY14 <i>Annual Update</i> On Hold volumes reported shipped in FY14 <i>Annual Update</i> Proposed compliance date for CP Activity 3.1.8(A) Proposed compliance date for CP Activity 3.3.4 (A and B)
Rev 26.0	STP/CP	01-30-2017	Added and deleted volumes reported in FY15 <i>Annual Update</i> On Hold volumes reported shipped in FY14 <i>Annual Update</i> Proposed compliance date for CP Activity 4.0-2 (C)

Table J-1 (continued)

Action	Document Modified	Effective Date	Effect on FFCO/STP
Rev 27.0	STP/CP	03/21/2017	Added and deleted volumes reported in FY16 Annual Update On Hold volumes reported shipped in FY14 Annual Update Proposed compliance date for CP Activities 4.0-2(a), and 4.0-2(c).
Rev 28.0	STP/CP	5/9/2019	Added and deleted volumes reported in FY17 Annual Update On Hold volumes reported shipped in FY14 Annual Update Proposed compliance date for CP Activities 3.1.8-2(A), and 3.3.4-2 (A and B).
Rev 29.0	STP/CP	4/9/2020	Added and deleted volumes reported in FY18 Annual Update using volume information spreadsheets supplied from TA-55, CMR and TWF and other databases for volume information at TA-54. Updated Tables and Appendices throughout document. Updated Part III, Section 3.2, FTWCs compliance date extension request and NMED approval. Updated Part III, Section 4.0, "Transfer of Covered MTRU Inventory" for CVDs. Appendix A was split into two tables: A-1 for N3B and A-2 for LANS. Appendix E was split into two tables: E-1 for N3B and E-2 for LANS. Appendix G was split into two tables: G-1 for N3B and G-2 for LANS.
Rev 30.0	STP/CP	9/22/2020	Updated volumes reported in FY19 Annual Update using data from WCATS. Updated tables and appendices throughout document. Table 2.2-1: Revised lines involved with information for "FY14 on Hold" to reflect current up-to-date information and clarity. Table 4.0-1: Updated the title of each column for clarity. Updated information throughout the report, either to remove redundancies and /or add information to keep the report up-to-date and consistent. Split Appendix D into two tables: D-1 for N3B and D-2 for Triad. Reconstructed all tables in Appendix F for clarity and purpose. Table F-1: Removed column "Total FY14 Inventory (abovegrade on Hold [m ³])" as this information is captured in F-2 and F-4 tables. Table F-4: Reworded the title for clarity.

Table J-1 (continued)

Action	Document Modified	Effective Date	Effect on FFCO/STP
Rev. 31.0	STP./CP	TBD	<p>-Updated volumes reported in FY19 Annual Report Update using data from WCATS.</p> <p>-Updated information throughout the report, either to remove redundancies and/or add information to keep the report up-to-date and consistent.</p> <p>-Updated tables and appendices throughout document.</p> <p>-Changed title of Table 2.1-1 from “FY19 MLLW Inventory Summary” to “STP Covered MLLW Inventory Summary.”</p> <p>Changed title of Table 2.2-1 from “Covered MTRU Inventory Summary” to “STP Covered MTRU Inventory Summary.”</p> <p>-Removed Table 4.0-1, “Treatability Groups for The Framework Agreement - 3706 MTRU Waste Campaign (remaining containers at TA-54 and WCS on hold),” and replaced with Appendix E-3 and Appendix G-3.</p> <p>-Relabeled Table 4.0-2 to Table 4.0-1, “Activities and Compliance Dates for MTRU Inventory for TA-54 and TA-55.”</p> <p>-Changed title of Table A-2 from “FY19 MLLW Inventory at CMR, TA-55, and TWF, Detailed Update by Treatability Group” to “FY20 Triad MLLW Inventory Detailed Update by Treatability Group.”</p> <p>-Revised Table C-1 title, “Administrative Adjustments,” to “FY20 MLLW Administrative Adjustments to TA-54 Inventory.”</p> <p>-Updated Table C-1 from a combined administrative adjustments table to a N3B-only administrative adjustments table.</p> <p>Updated title of Table C-2 to “FY20 Triad MLLW Inventory Administrative Adjustments.”</p> <p>-Updated Table C-2 from a detailed combined administrative adjustments table to a Triad-only administrative adjustments table.</p> <p>-Revised title of Table E-1 from “TA-54 MTRU Covered Inventory (by Treatability Group)” to “TA-54 MTRU Inventory (by Treatability Group).”</p> <p>-Updated Triad Table E-2 to be consistent with N3B Table E-1 in terms of treatability group and formatting. Changed title of E-2 from “Triad MTRU Inventory at TA-55, CMR, and TWF” to “FY20 Triad TA-55, CMR, and TWF MTRU Inventory Update by Treatability Group.”</p> <p>-Updated Appendix G, Table G-2, to be consistent with N3B Table G-1 in terms of treatability group and formatting. Changed title of Table G-2 from “FY19 MTRU Administrative Adjustments for TA-55, CMR Inventory” to “FY20 Triad TA-55, CMR, and TWF MTRU Inventory Administrative Adjustments.”</p> <p>Alphabetized in the comments column in Appendices A and E.</p>
