WIPP PANEL CLOSURE DESIGN DESCRIPTION AND SPECIFICATIONS

G1-1 Introduction

An important aspect of repository operations at the Waste Isolation Pilot Plant (WIPP) facility is the closure of waste disposal panels, also referred to as Hazardous Waste Disposal Units (HWDUs), under the Resource Conservation and Recovery Act (RCRA). Each of Panels 1 through 8 consists of a panel air-intake drift, a panel air-exhaust drift, and seven rooms. Panels 9 and 10 consist of the main entries (North to South) and cross entries (East to West). The closure of individual panels shall meet the closure requirements described in Attachment G and shall be built in accordance with the specifications in this attachment. This attachment describes the panel closure design and presents the applicable specifications and requirements for fabrication, installation, and maintenance of the WIPP Panel Closure (WPC).

The design discussed in this attachment is based on the Design Report, prepared by Golder Associates (Golder, 2016). Calculations demonstrating compliance with the volatile organic compounds (VOC) emission standards are included with the Design Report. Calculations addressing the performance of the WPC under the geometries in the access drifts and main entries, including an assessment of the required length of the run-of-mine (ROM) salt component, are also included in the Design Report. The specifications for standard steel bulkheads and ROM salt are included as Attachment G1 Appendix G1-A *Technical Specifications* and Attachment G1 Appendix G1-B *Drawings*.

G1-2 WPC Description

The WPC consists of WPC-A and WPC-B. The WPC-A is the design for Panels 1 through 8. They shall be closed using out-bye bulkheads in the panel intake and exhaust drifts. The WPC-A is also installed in Panel 9 in the main entries between S-2750 and S-2520. The WPC-B is the closure design for Panel 10. It consists of a combination of in-bye and out-bye bulkheads and a length of ROM salt placed in the main entries north of S-1600. The WPC locations are depicted in Figure G1-1.

G1-2a Permit Design Requirements

The applicable design requirements are provided in Permit Attachment G, Section G-1e(1). The WPC meets these design requirements as documented in the Design Report.

G1-2b Design Component Descriptions

The following subsections present a description of the WPC components. Individual specifications address shaft and underground access and materials handling, construction quality control, treatment of surfaces in the closure areas, and applicable design and construction standards.

The WPC-A consists of a standard steel bulkhead in the panel access drifts for Panels 1 through 8, near the intersection with the main entries or relocated to the main north-south drifts as determined by the geotechnical engineer. This bulkhead is referred to as the closure/out-bye bulkhead and it will be maintained for as long as it is accessible. Additional ventilation barriers may remain in the panels as part of the operational controls prior to WPC installation. These

1 ventilation barriers include steel bulkheads, brattice cloth and chain link, as well as concrete
2 block walls in Panels 1, 2, and 5. These ventilation barriers are not part of the WPC design and
3 will not impact the WPC-A bulkheads nor will they impede construction and maintenance of
4 closure bulkheads. WPC-A will also be emplaced in the main entries between Panels 9 and 10
5 (between S-2520 and S-2750).

6 The WPC-B design for the closure installed in the main entries north of Panel 10 (north of
7 S-1600) consists of ROM salt between in-bye and out-bye bulkheads as shown in Figure G1-2.

8 G1-2b(1) Steel Bulkhead

9 A bulkhead (Figure G1-3) serves to close panels by blocking ventilation to the intake and
10 exhaust access drifts of the panel and preventing personnel access. This use of a bulkhead is a
11 standard practice and the closure bulkhead shall be constructed as a typical WIPP facility
12 bulkhead. The bulkhead will consist of a steel member frame covered with sheet metal.
13 Telescoping tubular steel or functionally equivalent material shall be used to bolt the bulkhead to
14 the floor and roof. Flexible flashing material such as a rubber conveyor belt (or other appropriate
15 material) will be attached to the steel frame and the salt as a gasket, thereby providing an
16 effective yet flexible blockage to ventilation air. The steel bulkheads will be maintained for as
17 long as they are accessible to workers. In this regard, accessible bulkheads will be repaired,
18 renovated, or replaced as required. Permit Attachment E, Table E-1 provides the schedule for
19 inspecting panel closure bulkheads.

20 G1-2b(2) ROM Salt

21 Run-of-mine salt material from mining operations will be used in the main entries north of
22 Panel 10. The salt will be emplaced to a specified design length based on geomechanical
23 calculations described in detail in the Design Report.

24 G1-3 Constructability

25 The WPC-A and WPC-B can be constructed using available technologies for the construction of
26 bulkheads. The use of bulkheads is a standard practice at the WIPP facility and the closure
27 bulkheads will be constructed as typical WIPP facility bulkheads. Run-of-mine salt is available
28 from mining operations in sufficient quantities. The construction methods and materials required
29 for the ROM salt placement north of Panel 10 will use available technologies as discussed in the
30 Design Report.

31 Conventional WIPP facility mining practices will be used for the WPC construction. Work
32 packages will be prepared for the fabrication and installation of steel bulkheads and will list the
33 materials used, the equipment used, special precautions, and limitations. Each work package
34 will address location-specific prerequisites for installing the closure components, will contain the
35 bulkhead specifications, as appropriate, and the location where the closure components are to
36 be installed. Details on the conventional mining practices and work package preparation are
37 discussed in the Design Report and, further construction details are given in the technical
38 specifications included in Attachment G1, Appendix G1-A.

39 G1-4 Technical Specifications

40 The technical specifications are included in Attachment G1, Appendix G1-A, and are listed in
41 Table G1-1.

1 G1-5 Drawings

2 The drawings are included in Attachment G1, Appendix G1-B and are listed in Table G1-2.
