**Subject: Groundwater Monitoring at Sandia National Laboratories/New Mexico
Mixed Waste Landfill Conducted by NMED/DOE OB for FFY 2010 Q-2**

Dear Ms. Agogino:

This letter transmits the subject final report.

The monitoring results are provided to DOE as final. If you have any questions, or if you would like copies of the complete data set, please contact Chris Armijo at (505)845-5824 or contact me at (505)845-5933.

Sincerely,

Barry S. Birch
Program Manager
Sandia Oversight Section

Groundwater Monitoring at Sandia National Laboratories/New Mexico Mixed Waste Landfill Conducted by NMED/DOE OB for FFY 2010 Q-2

The New Mexico Environment Department (NMED) DOE Oversight Bureau (Bureau) has compiled and assessed groundwater data from samples collected in January 2010. The Bureau obtained groundwater samples from Mixed Waste Landfill (MWL) groundwater monitoring wells MWL-MW7, MWL-MW8, MWL-MW9. Split samples were collected by Sandia staff using standard Sandia sampling procedures and equipment. The Bureau split samples were submitted to an independent analytical laboratory for analyses of metals, non-metal inorganic compounds, radionuclides, and organic compounds. Toluene was detected at concentrations slightly above the method detection limit at MWL-MW8 and MWL-MW9, but the concentrations were below the EPA maximum contaminant level at both monitoring wells.

Data Assessment

Data results are compared to applicable Maximum Contaminant Levels (MCLs) from the EPA National Primary Drinking Water Regulations (40 CFR 141).

Results

Analytical results for total metals are listed in Table-1. Samples were analyzed for total (unfiltered) Target Analyte List (TAL) metals plus uranium. All metal concentrations were below established MCLs.

Analytical results for dissolved metals are listed in Table-2. Samples were analyzed for dissolved (filtered) Target Analyte List (TAL) metals plus uranium. All metal concentrations were below established MCLs.

Analytical results for non-metal inorganic compounds are listed in Table-3. Samples were analyzed for major anions (bromide, chloride, fluoride, and sulfate) and nitrate plus nitrite (NPN). All concentrations were below established MCLs.

Analytical results for radionuclides are listed in Table-4. Samples were analyzed for gamma-emitting isotopes and gross alpha/beta. All gamma-emitting isotopes and gross alpha activities were below established MCLs. Gross alpha ranged from 6.2 pCi/L at MWL-MW7 to 6.8 pCi/L at MWL-MW8.

Analytical results for volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) detected above their associated method detection limit (MDL) are listed in Table-5. Only toluene was detected above the MDL at monitoring wells MWL-MW8 (1.1 µg/L original and 0.88 µg/L duplicate) and MWL-MW9 (0.77 µg/L), but the concentrations were below the MCL of 1,000 µg/L.

Conclusions

Data results from Sandia for this sampling event have not been received at this time, so there is no direct comparison of results.

Toluene was detected at concentrations slightly above the method detection limit at MWL-MW8 and MWL-MW9, but the concentrations were three orders of magnitude below the EPA maximum contaminant level at both wells. Sandia is aware of the toluene presence in the two wells, and it is investigating the potential sources.

Response

Questions or comments should be addressed to Barry S. Birch by phone at (505)845-5933, by e-mail at barry.birch@state.nm.us, or to the address in the letterhead.

	Silver-110m	-0.17	± 2.8	4.7	U	713R10
	Sodium-22	1.9	± 3	5	U	713R10
	Strontium-85	3.1	± 3.7	5.9	U	713R10
	Thallium-208	5.6	± 3	4.6	TI	713R10
	Thorium-227	-1.1	± 19	32	U	713R10
	Thorium-234	84	± 66	120	U	713R10
	Uranium-235	20	± 19	30	U	713R10
	Zinc-65	14	± 13	22	U	713R10

Refer to the notes at the end of the tables.

Table 5- NMED DOE OB FFY 2010 Q-2 MWL Groundwater Quality Results: Detected VOCs and SVOCs

Monitoring Well/ Sample Date	Analyte	Result (µg/L)	EPA MCL (µg/L)	Quantitation Limit (µg/L)	MDL (µg/L)	Laboratory Qualifier	Analytical Method
MWL-MW8 6-Jan-10	Toluene	1.1	1000	1	0.17		SW8260_25
MWL-MW8 (DUP) 6-Jan-10	Toluene	0.88	1000	1	0.17	J	SW8260_25
MWL-MW9 7-Jan-10	Toluene	0.77	1000	1	0.17	J	SW8260_25

Refer to the notes at the end of the tables.

Notes

Result/Activity

mg/L = milligrams per liter

µg/L = micrograms per liter

pCi/L = pico Curies per liter

EPA MCL

Maximum Contaminant Level. Established by the U.S. Environmental Protection Agency National Primary Drinking Water Regulations (40 CFR 141)

NE = Not established

PQL

Practical Quantitation Limit. The lowest concentration that can be reliably measured by a laboratory with defined limits of precision and accuracy.

MDL

Method detection limit. The minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero.

MDA

The minimum detectable activity is defined as the activity at which there is a 95% confidence that an analyte signal will be distinguishable from an analyte free sample.

Inorganic/Organic Lab Qualifier

B = Result is an estimated value above MDL/IDL but less than reporting limit.

E = Reported value is estimated due to interferences

J = Result is an estimated value

U = Analyte was analyzed for but was not detected

Radiochemistry Lab Qualifier

J = Values is an estimated activity.

M = The requested MDC not met.

M3 = The requested MDC was not met, but the reported activity is greater than the reported MDC.

TI = Gamma: Nuclide identification is tentative.

U = Result is less than the sample specific MDC.

Mixed Waste Landfill Monitoring Wells
