Subject: [EXT] Citizen comment on methane rules

Dear Ms. Bisbey-Kuehn, NMED Air Quality Bureau, I am writing to urge support for Senator Udall's bill addressing pipeline safety. Methane is a greenhouse gas contributing greatly to global warming/climate change. It also makes people sick who live near drilling operations. The federal government is pushing regressive methane rule rollbacks, so we need to do everything we can at the state level to assure control methane pollution at the New Mexico state level. We need to show leadership and establish some of the best regulations in the country.

Thank you for considering my letter.

Sincerely,
Sarah Sisk
