**THIS PAGE LEFT INTENTIONALLY BLANK.**

## PREFACE

---

### I. Format and Organization of List and ROD

In 2013, the New Mexico Environment Department (NMED) merged Surface Water Quality Bureau's (SWQB) in-house water quality database with NMED's *Assessment Database* to create the *Surface water QUality Information Database* (SQUID) so both data and assessment conclusions could be housed in one database. SWQB took this opportunity to also re-design and streamline the *CWA §303(d)/§305(b) Integrated Report List* (IR List) format for ease of review, to incorporate additional information, and to reduce the total number of pages. The associated *Record of Decision* (ROD) is also now housed in SQUID. If there was no action for a specific impaired water during a particular listing cycle, there will be no ROD entry for that cycle (previously, these were noted as "None").

Similar to previous versions, the IR List and Record of Decision (ROD) are organized by watershed (8-digit HUC code). The following watersheds were studied and are reported on in this biennial listing cycle:

- Rio Puerco/Zuni River (2011)
- Gila River/San Francisco River tributaries (2011)
- Lower Rio Grande (2011-2012)
- Sacramento Mountains/Rio Ruidoso (2012)
- Pajarito Plateau (data downloaded from *Intellus New Mexico* database)

The majority of impairment determinations outside of these watershed studies, with few individual exceptions, remain unchanged from the final 2012 - 2014 Integrated List.

Outside data submitted by Amigos Bravos, Taos Pueblo, Elephant Butte Irrigation District, the United States Forest Service in collaboration with New Mexico State University, and the Village of Ruidoso were reviewed for Quality-Assurance/Quality-Control (QA/QC) purposes and utilized accordingly for assessment.

If no new data were submitted by outside sources or collected by SWQB for a particular Assessment Unit (AU), assessment conclusions were carried forward from the 2012 - 2014 IR List. All data collected during SWQB's 2013 rotational surveys were not available or reviewed for QA/QC purposes in time for development of this list. Conclusions from SWQB's 2013 and 2014 rotational surveys and will be a focus of the upcoming 2016 - 2018 listing cycle.

### II. What's New in 2014

#### a. Hardness with respect to hardness-dependent metals criteria

The hardness-dependent criteria "... are expressed as a function of dissolved hardness (as mg CaCO<sub>3</sub>/L)" per 20.6.4.900 NMAC. To ensure the correct hardness value was used to determine that applicable criteria, concurrent dissolved calcium and magnesium data were used to calculate hardness for hardness-dependent

metals calculations instead of any reported hardness values were not used. If both dissolved calcium and magnesium were not available, concurrent hardness was considered not available and the associated metals measurement was not assessed. In other words, no estimated for default hardness values were used to prepare the 2014 assessments.

**b. Total recoverable aluminum water quality criterion**

During the last triennial review of the State's *Standards for Interstate and Intrastate Surface Waters* (20.6.4 NMAC et seq.; Standards), the New Mexico Water Quality Control Commission (WQCC) adopted hardness-dependent total recoverable aluminum criteria for aquatic life uses which replace the previous dissolved aluminum criteria, except in cases where concurrent pH is below 6.5. The historic dissolved aluminum listings are retained as placeholders until adequate total recoverable aluminum, and supporting concurrent hardness-related data, are available to assess following SWQB's assessment procedures. Dissolved aluminum Total Maximum Daily Load planning documents (TMDLs) will not be developed in these cases.

20.6.4.900 NMAC Subsection J Paragraph (1)(e) states that total recoverable aluminum criteria are based on samples that were filtered to minimize mineral phases. SWQB's study of this issue concluded that a filter of 10 µm pore size minimizes mineral-phase aluminum without restricting amorphous or colloidal phases. If concurrent field turbidity of a sample is less than 30 Nephelometric turbidity Units (NTU), no filtration is needed to minimize mineral phases. Samples from waters with turbidity greater than 30 NTU must be filtered with 10-µm disposable in-line capsule filters (rather than paper filters that are designed for use in plate or funnel-type filter holders) prior to analysis. If they were not, these aluminum data were considered rejected for assessment purposes unless the reported value are below the applicable water quality criteria (WQC). This is acceptable because had these data with concurrent turbidity > 30 NTU be filtered, the reported value would have been even less (i.e., even further below the applicable WQC).

**c. Nutrient assessments and chlorophyll-a data collected 2011 and 2012**

All chlorophyll-a data analyzed by SWQB from September 1, 2011, through 2012 were rejected. Therefore, all stream nutrient assessments using solely SWQB data from our 2011 and 2012 surveys are considered incomplete. As a result, the following nutrient assessment approach was used to develop the 2014 IR List for stream AUs during this cycle:

If causal variable total nitrogen (TN) or total phosphorus (TP) indicate impairment, and response variables dissolved oxygen (DO) or pH indicate impairment, these nutrient assessments were noted as Impaired (IR Category 5C – Need more data to confirm listing prior to TMDL development). These AUs are prioritized for additional data collection.

If causal variable TN or TP indicate impairment, and response variables DO or pH do not indicate impairment, these nutrient assessments were noted as Not Assessed (NA – leaning toward *Full Support* [FS]). These AU are

prioritized for additional data collection if nutrients are currently listed as impaired.

A new nutrient assessment approach for lakes and reservoirs was developed and utilized this listing cycle. With respect to chlorophyll-a, the following assessment approach was used to develop the 2014 List for lakes and reservoirs AUs during this cycle:

If causal variable TN or TP indicate impairment, and response variables DO, Secchi depth, or % cyanobacteria indicate impairment, these will be noted as Impaired (IR Category 5C – Need more data to confirm listing prior to TMDL development). These AUs are prioritized for additional data collection.

If causal variable TN or TP indicate impairment, and response variables DO, Secchi depth, or % cyanobacteria do not indicate impairment, these will be noted as Not Assessed (NA – leaning FS). These AUs are prioritized for additional data collection if nutrients are currently listed as impaired.

**d. IR category 4B demonstration for dissolved copper in Sandia Canyon**

The 2014-2016 IR List includes a demonstration to change the existing upper Sandia Canyon dissolved copper listing from IR Category 5 to 4b. The IR Category 4b demonstration was developed by a third party following the guidelines in Appendix H of the 2014 Assessment Protocols. IR Category 4b demonstrations must ensure there are existing pollution control requirements and regulatory mechanisms planned or in place that are monitored and reasonably expected to result in attainment of the applicable water quality criterion in the near future. The IR Category 4b demonstration, including an attachment with response to an USEPA Region 6 preliminary review, is included as part of the 2014-2016 Integrated Report and List.

**e. Impairments without associated TMDLs have only “Source Unknown” as a Probable Source**

Starting with the 2012 listing cycle, any new impairment listings have been assigned a single Probable Source of “Source Unknown.” Probable Source Sheets will continue to be filled-out during rotational watershed surveys and watershed restoration activities by SWQB personnel. Information gathered from the Probable Source Sheets will be used to generate a draft Probable Source list in consequent TMDL planning documents. These draft Probable Source lists will be finalized with watershed group/stakeholder input during the pre-survey public meetings, TMDL public meetings, watershed based plan (WBP) development, and various public comment periods. The final Probable Source list in USEPA-approved TMDLs are used to update the subsequent IR List.

For the 2014 listing cycle, SWQB removed previously-reported non-TMDL Probable Source lists from the IR List, and replaced them with “Source Unknown” for consistency throughout the list with respect to this approach. Therefore, all reported Probable Source lists on the IR List have been through the TMDL process.

### III. Pajarito Plateau Assessment Notes

SWQB conducted a special study of the Pajarito Plateau in 2006 and 2007. This was primarily a storm water study performed with assistance and cooperation from the NMED Department of Energy Oversight Bureau (DOE OB) and Los Alamos National Laboratory (LANL). These data, along with available LANL data, were assessed during the 2010 assessment cycle.

For the 2014 cycle, SWQB combined these data with more recent LANL and NM DOE OB data downloaded from *Intellus New Mexico*. To prepare the final metals, polychlorinated biphenyls (PCBs), and radionuclide assessment datasets, the following steps were taken:

- a) Data downloaded and collated: All available 2004 – 2013 surface water quality data from priority watershed stations were collated. For the purpose of assessment, watershed stations are those sites located on a natural watercourse. This was determined based the sampling location having a clearly defined upstream surface water course drainage pattern when land surface topography is viewed on United States Geological Survey 24K quad maps.
- b) Station crosswalk created: Different sections within LANL, NM DOE OB, and SWQB do not use the same station naming convention. Therefore, an extensive station alias crosswalk was prepared in order to properly assign data into the appropriate station and associated assessment unit.
- c) Intellus NM data reviewed to determine usability for assessment purposes: As is the case with all outside data, relevant LANL and NM DOE OB standard operating procedures (SOPs) and quality assurance project plans (QAPPs) were reviewed by SWQB's QA Officer to assess for consistency with the SWQB's data collection activities and quality assurance procedures. These procedures met the basic SWQB submitted data requirements and were, therefore, found to be acceptable. Specific to this review were a multitude of data qualifiers used by LANL, NM DOE OB, and their associated laboratories. All practical attempts were made to equate these qualifier codes with those used and generated by SWQB and the State Laboratory Division Water Chemistry Lab for consistency and comparability. Two unique SWQB QA qualifiers were created and attributed to the Pajarito dataset in order to indicate applicability to assessment determination. These unique qualifiers (X & R) indicated whether or not the quality of the certain aspects of the data were uncertain but still considered usable for assessment purposes (X) or that the data should be rejected (R) and should not be used for assessment purposes. Data assigned R by the SWQB QA Officer were removed from the final Pajarito data assessment set.
- d) Assessment date range determined depending on data availability: The 2014 listing cycle generally includes data from May 1, 2008 – May 1, 2013. The collated Pajarito data set contained various date ranges depending on the sampling location. Therefore, the following rules were applied to prepare the final assessment dataset in order to give preference to more recent data:
  - a. If there were adequate data to do a complete assessment ( $n \geq 4$ ) from the period May 1, 2008, forward, data from this time period were assessed.

- b. If there were less than four data points available after May 1, 2008, at least the four most recent data points were assessed.
  - c. If there were only older data (prior to May 1, 2008), all data before this date considered.
- e) Duplicate data: Several of NM DOE OB and SWQB water quality monitoring stations are co-located at LANL gaging stations and set to automatically sample during storm events. Therefore, there are instances when storm water from the same storm event were collected and analyzed by both NMED and LANL, albeit from different points on the storm hydrograph and by different laboratories. Examples include data from LANL automatic water samplers (ISCOs) and NMED ISCOs, or LANL ISCOs and NMED Environmental Liquid Sampler (ELS) single stage sampling devices. Data were considered to be collected from the same storm event when the recorded sample time is generally within two hours. When this was the case, or in the case of field duplicates, the highest concentration was used for assessment to be conservative.
- f) Hardness-dependent metals: To assess hardness-dependent metals, concurrent hardness data calculated from dissolved calcium and magnesium were used. When these concurrent data were not available, the associated metals data were not assessed. All dissolved aluminum listings from the 2012-2014 Integrated List for the Pajarito Plateau were carried over as placeholders (IR Category 5C) because there are inadequate total recoverable aluminum data for the assessment period. Total recoverable aluminum samples with concurrent turbidity > 30 NTU must be filtered with a 10 micron filter prior to analysis to be usable for assessment.

#### IV. Useful Definitions

##### INTEGRATED LIST FIELD HEADINGS AND CODES --

ASSESSED	This field generally notes the last Integrated Reporting Cycle when data for this particular watershed were assessed and reported.
Assessment Unit (AU)	Descriptive name of a specific waterbody (stream reach or lake). Limited to 60 characters.
Assessment Unit ID (AU ID)	An internal database code that is not intended to provide any specific information to the reader of the list
ATTAINMENT	The use attainment status for the associated USE (Fully Supporting, Not Supporting, Not Assessed)
ASSESSED	This field generally notes the last Integrated Report Cycle when data for this particular watershed were assessed and reported.
CAUSE(S)	Parameters and/or constituents that are causing non-attainment of the associated USE

DO	The amount of dissolved oxygen in the water; usually reported in mg/L.
E. coli	<u><i>Escherichia coli</i></u>
FIRST LISTED	This field generally notes the first Integrated Reporting Cycle when the associated impairment was noted.
HUC	8-digit Hydrologic Unit Codes (HUC) that identify various watersheds. The US Geologic Survey defines these codes and associated watershed names.
IR	Integrated Report
IR Category	Overall water quality standards attainment category for each assessment unit as determined by combining individual designated use support decisions. The unique assessment categories for New Mexico are described as follows as follows:
IR Category 1	Attaining the water quality standards for all designated and existing uses. AUs are listed in this category if there are data and information that meet all requirements of the assessment and listing methodology and support a determination that the water quality criteria are attained.
IR Category 2	Attaining some of the designated or existing uses based on numeric and narrative parameters that were tested, and no reliable monitored data is available to determine if the remaining uses are attained or threatened. AUs are listed in this category if there are data and information that meet requirements of the assessment and listing methodology to support a determination that some, but not all, uses are attained based on numeric and narrative water quality criteria that were tested. Attainment status of the remaining uses is unknown because there is no reliable monitored data with which to make a determination.
IR Category 3	No reliable monitored data and/or information to determine if any designated or existing use is attained. AUs are listed in this category where data to support an attainment determination for any use are not available, consistent with requirements of the assessment and listing methodology.
IR Category 4A	Impaired for one or more designated uses, but does not require development of a TMDL because TMDL has been completed. AUs are listed in this subcategory once all TMDL(s) have been developed and approved by USEPA that, when implemented, are expected to result in full attainment of the standard. Where more than one pollutant is associated with the impairment of an AU, the AU remains in IR Category 5A (see below) until all TMDLs for each

pollutant have been completed and approved by USEPA.

IR Category 4B

Impaired for one or more designated uses, but does not require development of a TMDL because other pollution control requirements are reasonably expected to result in attainment of the water quality standard in the near future. Consistent with the regulation under 40 CFR 130.7(b)(i),(ii), and (iii), AUs are listed in this subcategory where other pollution control requirements required by local, state, or federal authority are stringent enough to implement any water quality standard (WQS) applicable to such waters.

IR Category 4C

Impaired for one or more designated uses, but does not require development of a TMDL because impairment is not caused by a pollutant. AUs are listed in this subcategory if a pollutant does not cause the impairment. For example, USEPA considers flow alteration to be “pollution” vs. a “pollutant.”

IR Category 5/5A

Impaired for one or more designated or existing uses and a TMDL is underway or scheduled. AUs are listed in this category if the AU is impaired for one or more designated uses by a pollutant. Where more than one pollutant is associated with the impairment of a single AU, the AU remains in IR Category 5A until TMDLs for all pollutants have been completed and approved by USEPA.

IR Category 5/5B

Impaired for one or more designated or existing uses and a review of the water quality standard will be conducted. AUs are listed in this category when it is possible that water quality standards are not being met because one or more current designated use is inappropriate. After a review of the water quality standard is conducted, a Use Attainability Analysis (UAA) will be developed and submitted to USEPA for consideration, or the AU will be moved to IR Category 5A and a TMDL will be scheduled.

IR Category 5/5C

Impaired for one or more designated or existing uses and Additional data will be collected before a TMDL is scheduled. AUs are listed in this category if there is not enough data to determine the pollutant of concern or there is not adequate data to develop a TMDL. For example, AUs with biological impairment will be listed in this category until further research can determine the particular pollutant(s) of concern. When the pollutant(s) are determined, the AU will be moved to IR Category 5A and a TMDL will be scheduled. If it is determined that the current designated uses are inappropriate, it will be moved to IR Category 5B and a UAA will be developed. If it is determined that “pollution” is causing the impairment (vs. a “pollutant”), the AU will be moved to IR Category 4C.

LOCATION DESCRIPTION

The name of the 8-digit Hydrologic Unit Code (HUC) watershed of the assessment unit as defined by the United States Geologic Survey.

MONITORING SCHEDULE	These proposed dates are primarily based on SWQB's most recent rotational watershed monitoring schedule. This date, as well as the "TMDL DATE" date, is ultimately dependent upon personnel, financial, and laboratory resources which change on an annual basis.
NPDES	National Pollutant Discharge Elimination System
NS	Non Support or Not Supporting
PCBs	Polychlorinated biphenyls; highly-persistent compounds that are fat soluble and accumulate in the food chain
PROBABLE SOURCE(S)	This field contains either 1) "Source Unknown" if no TMDLs have yet been developed, or 2) the Probable Sources noted in associated TMDLs that may be contributing to the noted impairment(s).
SBD	Stream bottom deposits; water contaminants that settle and damage or impair the normal growth, function, or reproduction of aquatic life or significantly alter the physical or chemical properties of the bottom (NMAC 20.6.4.13). These listings referred to as Sedimentation/Siltation impairment.
SIZE	Streams and/or rivers = Miles, Lakes and/or playas = Acres
TDS	Total dissolved solids, also referred to as "total filterable residue"
TOC	Total organic carbon
TMDL	Total Maximum Daily Load
TMDL DATE	This field contains either 1) estimated TMDL development year primarily based on SWQB's rotational monitoring schedule, consent decree deadlines, date since last intensively surveyed, upcoming permit renewals, etc.; or 2) the EPA TMDL approval date (MM/DD/YYYY) if a TMDL has already been developed and approved. This date, as well as the "Monitoring Schedule" date, is ultimately dependent upon personnel and financial resources which change on an annual basis.
USE	Any designated uses specified in the State of New Mexico Standards for Interstate and Intrastate Surface Waters (20.6.4 NMAC) that apply to the given assessment unit and/or any documented existing uses that apply to the given assessment unit. Uses that exist but are not officially designated in NMAC are also listed here with a note in "Assessment Unit Comments."
WQS REF	Applicable Water Quality Standard segment as described in the most recent State of New Mexico Standards for Interstate and Intrastate

Surface Waters (20.6.4 NMAC) that applies to the given assessment unit.

## V. Abbreviations in Assessment Unit Names

The size of the assessment unit name is limited to 60 characters by the database. Therefore, the following abbreviations were used when necessary:

abv	=	above
AZ	=	Arizona
blw	=	below
bnd	=	boundary
Campgrd	=	Campground
Ck	=	Creek
CO	=	Colorado
confl	=	confluence
Div	=	Diversion
E	=	East
Fk	=	Fork
FS	=	Forest Service (usually road)
hdwts	=	headwaters
HWY	=	Highway
Irr	=	irrigation
LANL	=	Los Alamos National Laboratory
M	=	Middle
NM	=	New Mexico
N	=	North
nr	=	near
OK	=	Oklahoma
prt	=	Portion (i.e., reaches)
R	=	River or Rio
Rsvr	=	Reservoir
S	=	South
Spr	=	Spring
SR	=	state road
TX	=	Texas
VCNP	=	Valles Caldera National Preserve
USFS	=	United States Forest Service
W	=	West

# USGS 8 Digit Hydrologic Unit Codes (HUCs)

## USGS 8-digit Hydrologic Unit Codes (HUCs) in New Mexico

Hydrologic Unit Codes	Watershed Name
11020010	Purgatoire
11040001	Cimarron Headwaters
11040002	Upper Cimarron
11080001	Canadian Headwaters
11080002	Cimarron
11080003	Upper Canadian
11080004	Mora
11080005	Conchas
11080006	Upper Canadian-Ute Reservoir
11080007	Ute
11080008	Revuelto
11090101	Middle Canadian-Trujillo
11090102	Punta de Agua
11090103	Rita Blanca
11090104	Carrizo
11100101	Upper Beaver

11120102	Palo Duro
12050001	Yellow House Draw
12050002	Blackwater Draw
12050005	Running Water Draw
12080001	Lost Draw
12080003	Monument-Seminole Draws
12080004	Mustang Draw
12080006	Sulphur Springs Draw
13010002	Alamosa-Trinchera
13010005	Conejos
13020101	Upper Rio Grande
13020102	Rio Chama
13020201	Rio Grande-Santa Fe
13020202	Jemez
13020203	Rio Grande-Albuquerque
13020204	Rio Puerco
13020205	Arroyo Chico
13020206	North Plains
13020207	Rio San Jose
13020208	Plains of San Agustin
13020209	Rio Salado
13020210	Jornada del Muerto
13020211	Elephant Butte Reservoir
13030101	Caballo
13030102	El Paso-Las Cruces
13030103	Jornada Draw

## 2014 State of New Mexico §303(d) List of Impaired Surface Waters

---

(Table of Contents of Category 5 waters on the following Integrated §303(d)/§305(b) List)

### **HUC: 11040001 - Cimarron Headwaters**

- Dry Cimarron R (Perennial reaches OK bnd to Long Canyon)

### **HUC: 11080001 - Canadian Headwaters**

- Lake Maloya
- Raton Creek (Chicorica Creek to headwaters)
- Stubblefield Lake
- VanBremmer Creek (HWY 64 to headwaters)
- Vermejo River (York Canyon to headwaters)
- York Canyon (Vermejo River to headwaters)

### **HUC: 11080002 - Cimarron**

- Eagle Nest Lake
- Greenwood Canyon (Middle Ponil Creek to headwaters)
- McCrystal Creek (North Ponil to headwaters)
- Middle Ponil Creek (South Ponil to Greenwood Creek)
- North Ponil Creek (Seally Canyon to headwaters)
- North Ponil Creek (South Ponil Creek to Seally Canyon)
- Ponil Creek (Cimarron River to US 64)
- Springer Lake

### **HUC: 11080003 - Upper Canadian**

- Charette Lake (Lower)

### **HUC: 11080005 - Conchas**

- Conchas Reservoir

### **HUC: 11080006 - Upper Canadian-Ute Reservoir**

- Ute Reservoir

### **HUC: 11100101 - Upper Beaver**

- Clayton Lake

### **HUC: 13010005 - Conejos**

- Canada Tio Grande (Rio San Antonio to headwaters)
- Rio San Antonio (CO border to Montoya Canyon)
- Rio San Antonio (Montoya Canyon to headwaters)

### **HUC: 13020101 - Upper Rio Grande**

## 2014 State of New Mexico §303(d) List of Impaired Surface Waters

---

- Acid Canyon (Pueblo to headwaters)
- Arroyo del Palacio (Rio Grande to headwaters)
- Bitter Creek (Red River to headwaters)
- Canada Aqua (Arroyo La Mina to headwaters)
- DP Canyon (Los Alamos Canyon to LANL bnd)
- Embudo Creek (Canada de Ojo Sarco to Picuris Pueblo bnd)
- Embudo Creek (Rio Grande to Canada de Ojo Sarco)
- Gold Creek (Comanche Creek to headwaters)
- Graduation Canyon (Pueblo Canyon to headwaters)
- Grassy Creek (Comanche Creek to headwaters)
- Guaje Canyon (San Ildefonso bnd to headwaters)
- Los Alamos Canyon (DP Canyon to upper LANL bnd)
- Los Alamos Canyon (NM-4 to DP Canyon)
- Pioneer Creek (Red River to headwaters)
- Pojoaque River (San Ildefonso bnd to Pojoaque bnd)
- Pueblo Canyon (Acid Canyon to headwaters)
- Pueblo Canyon (Los Alamos Canyon to Los Alamos WWTP)
- Pueblo Canyon (Los Alamos WWTP to Acid Canyon)
- Red River (Placer Creek to headwaters)
- Rio Fernando de Taos (R Pueblo d Taos to USFS bnd at canyon)
- Rio Grande (Embudo Creek to Rio Pueblo de Taos)
- Rio Grande (Ohkay Owingeh bnd to Embudo Creek)
- Rio Grande (Red River to CO border)
- Rio Grande (Santa Clara Pueblo bnd to Ohkay Owingeh bnd)
- Rio Grande del Rancho (Rio Pueblo de Taos to HWY 518)
- Rio Pueblo (Picuris Pueblo bnd to headwaters)
- Rio Pueblo de Taos (Arroyo del Alamo to R Grande del Rancho)
- Rio Pueblo de Taos (Rio Grande to Arroyo del Alamo)
- Rio Santa Barbara (non-pueblo Embudo Ck to USFS bnd)
- Santa Cruz Lake
- Santa Cruz River (San Clara Pueblo bnd to Santa Cruz Dam)
- South Fork Acid Canyon (Acid Canyon to headwaters)
- Unnamed Arroyo (Rio Pueblo de Taos to Taos WWTP)
- Vidal Creek (Comanche Creek to headwaters)
- Walnut Canyon (Pueblo Canyon to headwaters)

### **HUC: 13020102 - Rio Chama**

- Abiquiu Creek (Rio Chama to headwaters)
- Abiquiu Reservoir

## 2014 State of New Mexico §303(d) List of Impaired Surface Waters

---

- Arroyo del Toro (Rio Chama to headwaters)
- Burns Lake (Rio Arriba)
- Canada de Horno (Rio Chama to headwaters)
- Canjilon Ck (Perennial portions Abiquiu Rsrv to headwaters)
- Canones Creek (Abiquiu Reservoir to headwaters)
- Chihuahueros Creek (Canones Creek to headwaters)
- Coyote Creek (Rio Puerco de Chama to headwaters)
- El Rito Creek (Perennial reaches above HWY 554)
- El Rito Creek (Perennial reaches below HWY 554)
- El Vado Reservoir
- Heron Reservoir
- Hopewell Lake
- Placer Creek (Hopewell Lake to headwaters)
- Poleo Creek (Rio Puerco de Chama to headwaters)
- Rio Brazos (Rio Chama to Chavez Creek)
- Rio Chama (El Vado Reservoir to Rito de Tierra Amarilla)
- Rio Chama (Rito de Tierra Amarilla to Rio Brazos)
- Rio Nutrias (Perennial prt Rio Chama to headwaters)
- Rio Ojo Caliente (Rio Chama to Rio Vallecitos)
- Rio Puerco de Chama (Abiquiu Reservoir to HWY 96)
- Rio del Oso (Perennial prt Rio Chama to headwaters)
- Rito Encino (Rio Puerco de Chama to headwaters)
- Rito de Tierra Amarilla (HWY 64 to headwaters)
- Rito de Tierra Amarilla (Rio Chama to HWY 64)
- Sexto Creek (Rio Chamita to CO border)

### **HUC: 13020201 - Rio Grande-Santa Fe**

- Ancho Canyon (North Fork to headwaters)
- Ancho Canyon (Rio Grande to North Fork Ancho)
- Arroyo de la Delfe (Pajarito Canyon to headwaters)
- Canada del Buey (within LANL)
- Canon de Valle (LANL gage E256 to Burning Ground Spr)
- Canon de Valle (below LANL gage E256)
- Canon de Valle (upper LANL bnd to headwaters)
- Galisteo Ck (Perennial prt Kewa bnd to 2.2 mi abv Lamy)
- Las Huertas Ck (Perennial prt Santa Ana Pueblo bnd to hws)
- Mortandad Canyon (within LANL)
- North Fork Ancho Canyon (Ancho Canyon to headwaters)
- Pajarito Canyon (Arroyo de La Delfe to Starmers Spring)

## 2014 State of New Mexico §303(d) List of Impaired Surface Waters

---

- Pajarito Canyon (upper LANL bnd to headwaters)
- Pajarito Canyon (within LANL above Starmers Gulch)
- Pajarito Canyon (within LANL below Arroyo de La Delfe)
- Potrillo Canyon (above Water Canyon)
- Rio Grande (Cochiti Reservoir to San Ildefonso bnd)
- Rito de los Frijoles (Rio Grande to Upper Crossing)
- Rito de los Frijoles (Upper Crossing to headwaters)
- San Pedro Creek (San Felipe bnd to headwaters)
- Sandia Canyon (Sigma Canyon to NPDES outfall 001)
- Sandia Canyon (within LANL below Sigma Canyon)
- Santa Fe River (Cochiti Pueblo bnd to Paseo del Canon)
- Santa Fe River (Paseo del Canon to Santa Fe WWTP)
- Santa Fe River (Santa Fe WWTP to Guadalupe St)
- Ten Site Canyon (Mortandad Canyon to headwaters)
- Three Mile Canyon (Pajarito Canyon to headwaters)
- Two Mile Canyon (Pajarito to headwaters)
- Water Canyon (Area-A Canyon to NM 501)
- Water Canyon (upper LANL bnd to headwaters)
- Water Canyon (within LANL below Area-A Cyn)

### **HUC: 13020202 - Jemez**

- Clear Creek (Rio de las Vacas to San Gregorio Lake)
- East Fork Jemez (San Antonio Creek to VCNP bnd)
- East Fork Jemez (VCNP to headwaters)

WH	Fully Supporting				
PC	Fully Supporting				
LW	Fully Supporting				
<b>AU Comment:</b> Warmwater Aquatic Life is an existing use. The "mercury in fish tissue" listing is based on NMs current fish consumption advisories for this water body. Per USEPA guidance, these advisories demonstrate non-attainment of CWA goals stating that all waters should be "fishable." Therefore, the impaired designated use is the associated aquatic life even though human consumption of the fish is the actual concern.

**AU Comment:** The "mercury in fish tissue" listing is based on NMs current fish consumption advisories for this water body. Per USEPA guidance, these advisories demonstrate non-attainment of CWA goals stating that all waters should be "fishable". Therefore, the impaired designated use is the associated aquatic life even though human consumption of the fish is the actual concern.

**AU Comment:** The SWQB Watershed Protection Section completed a special study of E. coli levels with associated flow observations in the upper 3 miles of Rio Fernando de Taos and the Apache Canyon tributary to assess potential impacts from livestock grazing in 2006. The study demonstrated instances when grazing on the Flechado Allotment probably increased E. coli levels in Apache Canyon and this portion of Rio Fernando de Taos in 2006. The USFS Carson National Forest in cooperation with SWQB collected E. coli data in 2007 (combined with 2006 data and assessed for 2008 cycle). NMEDs Hydrology Protocol (<http://www.nmenv.state.nm.us/swqb/Hydrology/>) was performed at this AU on 5/23/11. According to the protocol and supporting information, this AU falls under the perennial definition in 20.6.4.7 NMAC

<b>AU Comment:</b> TMDL for turbidity. The "PCB in fish tissue" listing is based on NMs current fish consumption advisories for this water body. Per USEPA guidance, these advisories demonstrate non-attainment of CWA goals stating that all waters should be "fishable". Therefore, the impaired designated use is the associated aquatic life even though human consumption of the fish is the actual concern.

**AU Comment:** A waste load allocation for nutrients was previously completed for the Rio Hondo in 1981. Recent stream surveys (2000-2004) have found that the Rio Hondo near the Village of Taos Ski Valley fully supports its designated uses. The Village of Taos Ski Valley has plans to increase their capacity and effluent discharge into the river so the SWQ developed a revised nutrient TMDL for this reach that defines a waste load allocation for the Village of Taos Ski Valley such that increased discharge from the waste water treatment plant will not cause violations of the water quality standards protecting the Rio Hondo.

**AU Comment:** The "PCB in fish tissue" listing is based on NMs current fish consumption advisories for this water body. Per USEPA guidance, these advisories demonstrate non-attainment of CWA goals stating that all waters should be "fishable." Therefore, the impaired designated use is the associated aquatic life even though human consumption of the fish is the actual concern. RACER data were used to determine the PCB and adjusted gross alpha 2012 listings. Additional data would helpful prior to TMDL development.

<b>AU Comment:</b> This lake is in the upper portion of the Santa Fe Municipal Watershed. Access is restricted to protect the water supply reservoirs, so primary contact should not be existing uses. This water body was sampled once in 2007 as part of a data gathering effort related to nutrients. Although there were no exceedences, an n=1 is insufficient to assess for impairments.

**AU Comment:** TMDL were previously prepared for pH and conductivity. Sulphur Creek was broken out as a separate water quality standard segment (NMAC 20.6.4.124) as a result of unique, naturally low pH conditions, with a segment specific pH range of 2.0 to 9.0. The aquatic life use was also changed from high quality coldwater to limited aquatic life, thus removing the specific conductance criterion. Therefore, pH and specific conductivity were removed as causes on non support.

**AU Comment:** This AU is likely not perennial (sampling station dry during 2 of 6 visits). A standing pool was the only observation of water during 1 of the remaining 4 visits. There is a distinct slope break in the AU. Water pools at the bottom up the upper reach that has the more gentle slope. The bottom reach has a steeper slope and appears to clearly be ephemeral per staff that repeatedly visited the site. The AU may need to be split.

**AU Comment:** TMDL for fecal coliform. De-listed for fecal coliform because this criteria was replaced with E. coli during the 2005 triennial. The dissolved oxygen impairment may indicate excessive nutrients. Protocols for nutrients in large rivers are under development. The "PCB in fish tissue" listing is based on NMs current fish consumption advisories for this water body. Per USEPA guidance, these advisories demonstrate non-attainment of CWA goals stating that all waters should be "fishable." Therefore, the impaired designated use is the associated aquatic life even though human consumption of the fish is the actual concern. TMDL for e. coli (2010).

PWS	Not Assessed				

**AU Comment:** TMDL for fecal coliform. De-listed for fecal coliform because this criteria was replaced with E. coli during the 2005 triennial. The dissolved oxygen impairment may indicate excessive nutrients. Protocols for nutrients in large rivers are under development. The "PCB in fish tissue" listing is based on NMs current fish consumption advisories for this water body. Per USEPA guidance, these advisories demonstrate non-attainment of CWA goals stating that all waters should be "fishable." Therefore, the impaired designated use is the associated aquatic life even though human consumption of the fish is the actual concern. TMDL for e. coli (2010). DOE OB submitted PCB and gross alpha data for the 2012 listing cycle. Additional data would helpful prior to TMDL development.

WWAL	Not Supporting	PCB in Fish Tissue Mercury in fish tissue	2010 2004		
LW	Fully Supporting				
WH	Fully Supporting				
PC	Fully Supporting				
<b>AU Comment:</b> Elephant Butte was studied by SWQB in 2003 and 2004 as part of a Clean Water Act 104b3 grant. The results of the study indicate that the reservoir may be subject to eutrophication from nutrient input and as a result of periodic reservoir draw down. Nutrient assessment protocols for lakes and reservoirs to determine impairment of narrative NMs narrative plant nutrient water quality standard are under development. The mercury and PCBs in fish tissue listings are based on NMs current fish consumption advisories for this water body. Per USEPA guidance, these advisories demonstrate non-attainment of CWA goals stating that all waters should be "fishable." Therefore, the impaired designated use is the associated aquatic life even though human consumption of the fish is the actual concern. Land management agencies have posted contact recreation warnings due to toxic blue green algae. SWQB does not have water quality standards or assessment procedures related to blue green algae at this time.

		Nutrient/Eutrophication	2004	2017 (est.)	
		Mercury in fish tissue	2004		
IRR	Fully Supporting				
PC	Fully Supporting				

**AU Comment:** The "mercury in fish tissue" listing is based on NMs current fish consumption advisories for this water body. Per USEPA guidance, these advisories demonstrate non-attainment of CWA goals stating that all waters should be "fishable." Therefore, the impaired designated use is the associated aquatic life even though human consumption of the fish is the actual concern.

**AU Comment:** Lake is actually an impounded playa. Although the reservoir is associated with Holloman Air Force Base, the public does have access and the AFB is considering adding a park. This lake has very high salinity, and is thus not suitable for livestock watering or supporting a viable fishery. Limited aquatic life might be a more realistic use based on salinity.

WWAL	Not Supporting	DDT in fish tissue PCB in Fish Tissue	2010 2010		
<b>AU Comment:</b> The DDT and PCBs in fish tissue listings are based on NMs current fish consumption advisories for this water body. Per USEPA guidance, these advisories demonstrate non-attainment of CWA goals stating that all waters should be "fishable". Therefore, the impaired designated use is the associated aquatic life even though human consumption of the fish is the actual concern.

<b>AU Comment:</b> SWQB sampled four stations four times on the Black River in 2007 and 2008 to gather information for the NM Department of Game and Fish related to a potential ONRW nomination. There were 0 of 16 exceedences of any parameter sampled (ions, nutrients, semi-volatile and volatile organics). An EMAP bio/hab survey was also conducted. It was not possible to determine any potential sedimentation impairment because a suitable reference site could not be identified.

WH	Fully Supporting				
LW	Fully Supporting				

**AU Comment:** Land management agencies have posted contact recreation warnings due to toxic blue green algae in the past. SWQB does not have water quality standards or assessment procedures related to blue green algae at this time. The "mercury in fish tissue" listing is based on NMs current fish consumption advisories for this water body. Per USEPA guidance, these advisories demonstrate non-attainment of CWA goals stating that all waters should be "fishable". Therefore, the impaired designated use is the associated aquatic life even though human consumption of the fish is the actual concern.
