The New Mexico Water Quality Control Commission (WQCC) will hold a public hearing on July 11, 2017 at the New Mexico State Capitol building in Santa Fe to consider a Petition filed by United Nuclear Corporation for alternative abatement standards under Subsection 20.8.2.4103(F) for the former St. Anthony Mine located on the Cebolleta Land Grant, Cibola County, New Mexico. The affected property area is approximately 1,072 acres located approximately three miles east-southeast of Moquino and approximately 13 miles north of Laguna Pueblo. The St. Anthony Mine is located within Township 11 North, Range 4 and 5 West. The latitude and longitude of the four corners of the affected property area are: the northwest corner 35.17 degrees north and -107.32 degrees west; the northeast corner 35.17 degrees north and -107.29 degrees west; the southeast corner, 35.15 degrees north and -107.29 degrees west; and the southwest corner, 35.15 degrees north and -107.32 degrees west.

The Petition proposes alternative abatement standards for sulfate, fluoride, boron, uranium, radium, chloride, and total dissolved solids in the affected water-bearing zone of the Jackpile sandstone groundwater. The Petition includes proposed administrative controls to ensure that the affected area of Jackpile sandstone groundwater is not used as a potable water supply going forward. As one of the proposed administrative controls, the Petition contemplates that the New Mexico Environment Department will petition the New Mexico State Engineer to issue an Order under Subsection 19.27.5.13(A), prohibiting construction of wells in the affected property area in the water-bearing zone of the Jackpile sandstone groundwater. The New Mexico Environment Department has recommended that the Commission approve the Petition.
