Apr 27, 2013

N.M. Water Quality Control Commission co Pam Castaneda Santa Fe, NM 87501

To co Pam Castaneda,

I urge the Water Quality Control Commission to reject the New Mexico Environment Department's proposed copper-mining rule now under consideration.

New Mexico Environment Department's proposed rule violates the state Water Quality Act, which requires companies to prevent groundwater contamination during their operations.

Environment Department managers ignored the recommendations of their own technical staff and the Advisory Committee for this proposal; instead they adopted the copper-mining industry's requests to allow contamination.

Our water and groundwater is irreplaceable in this time of drought.  
Once water is polluted by mine wastes, it is no longer available as a water source.

The Water Quality Control Commission is required to adopt regulations "to prevent or abate water pollution in the state."

Please heed your important responsibility to protect New Mexicans' water by remanding this proposal back to the Environment Department and requiring it to produce a set of rules that protects New Mexicans and our water, not just the business interests of the copper-mining corporations.

Thank you for your consideration.

Sincerely,

Rebecca Kraimer  
4500 Panorama Dr  
Las Cruces, NM 88011-7222

Apr 27, 2013

N.M. Water Quality Control Commission co Pam Castaneda Santa Fe, NM 87501

To co Pam Castaneda,

I urge the Water Quality Control Commission to reject the New Mexico Environment Department's proposed copper-mining rule now under consideration.

New Mexico Environment Department's proposed rule violates the state Water Quality Act, which requires companies to prevent groundwater contamination during their operations.

Environment Department managers ignored the recommendations of their own technical staff and the Advisory Committee for this proposal; instead they adopted the copper-mining industry's requests to allow contamination.

Our water and groundwater is irreplaceable in this time of drought.  
Once water is polluted by mine wastes, it is no longer available as a water source.

The Water Quality Control Commission is required to adopt regulations "to prevent or abate water pollution in the state."

Please heed your important responsibility to protect New Mexicans' water by remanding this proposal back to the Environment Department and requiring it to produce a set of rules that protects New Mexicans and our water, not just the business interests of the copper-mining corporations.

Thank you for your consideration.

Sincerely,

Barbara Kruse  
29 Olive Rd  
Sandia Park, NM 87047-9346

Apr 27, 2013

N.M. Water Quality Control Commission co Pam Castaneda Santa Fe, NM 87501

To co Pam Castaneda,

I urge the Water Quality Control Commission to reject the New Mexico Environment Department's proposed copper-mining rule now under consideration.

New Mexico Environment Department's proposed rule violates the state Water Quality Act, which requires companies to prevent groundwater contamination during their operations.

Environment Department managers ignored the recommendations of their own technical staff and the Advisory Committee for this proposal; instead they adopted the copper-mining industry's requests to allow contamination.

Our water and groundwater is irreplaceable in this time of drought.  
Once water is polluted by mine wastes, it is no longer available as a water source.

The Water Quality Control Commission is required to adopt regulations "to prevent or abate water pollution in the state."

Please heed your important responsibility to protect New Mexicans' water by remanding this proposal back to the Environment Department and requiring it to produce a set of rules that protects New Mexicans and our water, not just the business interests of the copper-mining corporations.

Thank you for your consideration.

Sincerely,

Myra Parmer

**Subject:** Public comment on Water Quality Rules for Copper Mining WQCC 12-01 (R)

Apr 27, 2013

N.M. Water Quality Control Commission co Pam Castaneda Santa Fe, NM 87501

To co Pam Castaneda,

I urge the Water Quality Control Commission to reject the New Mexico Environment Department's proposed copper-mining rule now under consideration.

New Mexico Environment Department's proposed rule violates the state Water Quality Act, which requires companies to prevent groundwater contamination during their operations.

Environment Department managers ignored the recommendations of their own technical staff and the Advisory Committee for this proposal; instead they adopted the copper-mining industry's requests to allow contamination.

Our water and groundwater is irreplaceable in this time of drought.  
Once water is polluted by mine wastes, it is no longer available as a water source.

The Water Quality Control Commission is required to adopt regulations "to prevent or abate water pollution in the state."

Please heed your important responsibility to protect New Mexicans' water by remanding this proposal back to the Environment Department and requiring it to produce a set of rules that protects New Mexicans and our water, not just the business interests of the copper-mining corporations.

Thank you for your consideration.

Sincerely,

Robert Johnson
