**Final Report**

**6/22/2017**

---

The purpose of this communication is to transmit groundwater quality data collected by the New Mexico Environment Department DOE Oversight Bureau from Chemical Waste Landfill groundwater monitoring wells during second quarter of Federal Fiscal Year 2017.

Acknowledgment:

## **Introduction**

The New Mexico Environment Department (NMED) DOE Oversight Bureau (DOE-OB or Bureau) has compiled and assessed groundwater data collected during January 2017. The Bureau collected groundwater samples from Chemical Waste Landfill (CWL) groundwater monitoring wells CWL-BW5, CWL-MW9 (plus duplicate), CWL-MW10 and CWL-MW11. Split samples were collected using standard Sandia National Laboratories/New Mexico (SNL/NM) sampling procedures and equipment in accordance with the CWL Post-Closure Care Permit (PCCP), Permit Attachment 2, Groundwater Sampling and Analysis Plan (NMED October 2009). Samples were analyzed for total target analyte list (TAL) metals and volatile organic compounds (VOCs). The Bureau used ALS Environmental Laboratory located in Fort Collins, Colorado to analyze and report data results from samples collected at CWL. ALS Environmental is an independent analytical laboratory under contract with the NMED. No sample concentrations exceeded established U.S. Environmental Protection Agency (EPA) Maximum Contaminant Levels (MCLs) or concentration limits for the hazardous constituents of concern at the CWL listed in the PCCP.

## **Data Assessment**

All groundwater samples were collected and analyzed in accordance with U.S. EPA protocols. The Bureau's data results are compared to applicable MCLs established by the U.S. EPA National Primary Drinking Water Regulations (40 CFR 141), National Primary Drinking Water Standards, EPA, July 2002, and to the Groundwater Concentration Limits for Hazardous Constituents of Concern (COC) in Table 1-2 of the CWL Post-Closure Care Permit, Permit Attachment 1, Post-Closure Plan for the CWL (NMED October 2009).

For this monitoring event, the split samples collected by SNL/NM were analyzed for metals (chromium and nickel), trichloroethene (TCE), and the enhanced list of VOCs, including 1,1 dichloroethene; 1,1,2-trichloro-1 2,2-trifluoroethane (commonly known as Freon 113); chloroform; tetrachloroethylene (PCE); and trichlorofluoromethane (commonly known as Freon 11).

## **Results**

Analytical results for total TAL metals are presented in Table-1. Metals concentrations for chromium and nickel were below established MCLs and PCCP concentration limits; all other metals concentrations were below established MCLs. In accordance with the CWL PCCP, SNL/NM only analyzes groundwater samples for the metals chromium and nickel. The CWL PCCP concentration limits for chromium and nickel are 0.050 mg/L and 0.028 mg/L, respectively.

Volatile organic compounds detected at concentrations above the method detection limits (MDLs) are presented in Table-2. Trichloroethene (TCE) was

detected above the MDL at monitoring well CWL-MW10 at a concentration of 0.88 µg/L. The result was “J” flagged, indicating that the result was an estimated value. The TCE concentration was below the EPA MCL and CWL PCCP limit of 5 µg/L. Table-3 summarizes laboratory MDLs for the remaining VOCs analyzed from the samples collected at CWL monitoring wells.

### **Conclusion**

Groundwater samples were collected from four (4) monitoring wells during this semi-annual sampling event at the CWL. Samples collected by the Bureau and analyzed by ALS Environmental reported concentrations of metals and VOCs below established EPA MCLs and SNL/NM COC concentration limits listed in the PCCP. Groundwater results from CWL are comparable to historical results.

The DOE-OB will continue to monitor groundwater quality at the CWL semi-annually and make the data reports available to the public.
