Acting Deputy Secretary

Groundwater Monitoring at Sandia National Laboratories/New Mexico Groundwater Protection Program Conducted by NMED DOE OB for FFY 2011 Q-3

The New Mexico Environment Department (NMED) DOE Oversight Bureau (Bureau) has compiled and assessed groundwater data collected during May 2012. The Bureau collected groundwater samples from Groundwater Protection Program (GWPP) monitoring wells MRN-3D, SFR-2S, SWTA3-MW3 and TRE-1. Samples were also collected from Coyote Springs located in Arroyo del Coyote. Split samples were collected using standard Sandia National Laboratories/New Mexico (SNL/NM) sampling equipment and procedures. The samples were submitted for analysis to an independent analytical laboratory for Target Analyte List (TAL) metals plus uranium, total mercury, major anions, nitrate-nitrite, total cyanide, high explosive (HE) compounds, volatile organic compounds (VOCs), gamma emitting isotopes, gross alpha, gross beta, radium-226, radium-228 and isotopic uranium. An elevated concentration of beryllium was observed in the sample collected from Coyote Springs.

Data Assessment

All groundwater samples were collected and analyzed in accordance with U.S. Environmental Protection Agency (EPA) protocols. Data results are compared to applicable Maximum Contaminant Levels (MCLs) established by the U.S. EPA National Primary Drinking Water Regulations (40 CFR 141), National Primary Drinking Water Standards, EPA, July 2002.

Results

Analytical results for Target Analyte List (TAL) metals are presented in Table-1. Samples were analyzed for dissolved TAL metals plus uranium and total mercury. No metal parameters were detected above established regulatory standards, except for beryllium. Beryllium was detected above the EPA MCL of 0.004 mg/L in a sample collected from Coyote Springs at a concentration of 0.0072 mg/L.

General chemistry analytical results are presented in Table-2. Samples were analyzed for major anions (bromide, chloride, fluoride and sulfate), nitrate-nitrite and total cyanide. No samples exceeded their associated MCL.

Analytical results for HE compounds are listed in Table-3. Samples were analyzed for HE compounds from samples collected at monitoring wells SFR-2S, SWTA3-MW3 and TRE-1. The compound 1,3-dinitrobenzene was detected above the laboratory method detection limit

(MDL) at monitoring wells SFR-2S and CTF-MW2 at concentrations of 0.068 µg/L and 0.022 µg/L, respectively. Values were detected below the practical quantitation limits (PQLs) and qualified with "J" as estimated values. No EPA drinking water standard exists for 1,3-dinitrobenzene.

Table-4 summarizes detected volatile organic compounds (VOCs). No VOCs were detected at concentrations above established MCLs. Chloroform was detected at a concentration of 0.6 µg/L in the sample collected from TRE-1. The concentration was detected above the laboratory MDL, but below PQL. As a result, the value reported by the laboratory, was qualified with "J" as an estimated concentration. The laboratory MDLs for the remaining VOCs analyzed from GWPP monitoring wells are presented in Table-5.

Analytical results for radionuclides are listed in Table-4. Samples were analyzed for gross alpha, gross beta, gamma emitting isotopes, radium 226 and 228 and isotopic uranium. Unadjusted gross alpha activity ranged from 2.89 ± 1.9 pCi/L at MRN-3D to 23.9 ± 7.8 pCi/L at TRE-1. The EPA MCL for gross alpha activity of 15 pCi/L is based on a corrected gross alpha value, which excludes both total uranium and radon from initial gross alpha count. When the total uranium activity was subtracted from the gross alpha value, the gross activity was below the MCL. All other gamma emitters and radium isotopes were below established MCLs.

Response

Questions or comments should be addressed to Chris Armijo by phone at (505) 383-2070, by e-mail at chris.armijo1@state.nm.us, or to the address in the letterhead.

B = Estimated result. Result is less than RL and greater than or equal to the IDL.

D = Dilution

G = Elevated reporting limit. The reporting limit is elevated due to matrix interference.

J = Estimated: The analyte was positively identified; the quantitation is an estimation

NE = Not established

Q = Elevated reporting limit. The reporting limit is elevated due to high analyte levels.

U = Analyte not detected at or above the reporting limit or MDL
