**Subject:** **Data Submittal for Groundwater Monitoring at Sandia National Laboratories/New Mexico LTS Groundwater Monitoring Program Conducted by the New Mexico Environment Department DOE Oversight Bureau for FFY 2019 Q-2**

Ms. Branson:

This letter transmits the subject report as final. The report shows groundwater data results from Sandia National Laboratories/New Mexico Long-Term Stewardship Groundwater Monitoring Program collected by the New Mexico Environment Department DOE Oversight Bureau during the second quarter of FFY 2019.

The enclosed monitoring results were provided to the U.S Department of Energy in draft form on June 13, 2019 for 30-day review and comment. The final monitoring results are provided to DOE, the State of New Mexico and other federal agencies, the NMED website and interested members of the public. If you have any questions, or if you would like copies of the complete data set, please contact me by phone at (505) 383-2070, by email at [chris.armijo1@state.nm.us](mailto:chris.armijo1@state.nm.us), or by mail to the address in the above letterhead.

Sincerely,

A handwritten signature in blue ink that reads "Chris Armijo".

Chris Armijo  
Environmental Scientist  
Sandia Oversight Section

**Final Report**

**7/3/2019**

---

The purpose of this communication is to transmit groundwater quality data collected by the New Mexico Environment Department DOE Oversight Bureau from Sandia National Laboratories, New Mexico (SNL/NM) Long-term Stewardship Groundwater Monitoring Program during the second quarter of Federal Fiscal Year 2019.

**Acknowledgment:**

This material is based upon work supported by the Department of Energy Office of Environmental Management under Award Number *DE-EM0002420*.

## **Introduction**

The New Mexico Environment Department (NMED) DOE Oversight Bureau (DOE-OB or Bureau) has compiled and assessed groundwater data collected during March 2019. The Bureau collected groundwater samples from Sandia National Laboratories/New Mexico (SNL/NM) Long-term Stewardship (LTS) Groundwater Monitoring Program (GMP). The Bureau collected samples from sixteen (16) GMP monitoring wells (CCBA-MW2, CTF-MW1, CYN-MW5, GREYSTONE-MW2, MRN-2, MRN-3D, NWTa3-MW3D, OBS-MW1, PL-2, PL-4, SFR-2S, SFR-4T, SWTA3-MW2, SWTA3-MW3, SWTA3-MW4, and TRE-1). One (1) surface water sample was also collected from Coyote Springs located in Arroyo del Coyote. Samples were collected using standard SNL/NM sampling procedures and equipment. The samples were submitted to an independent analytical laboratory to be analyzed for target analyte list (TAL) metals plus uranium, total mercury, alkalinity, anions, nitrate-nitrite as nitrogen (N), cyanide, volatile organic compounds (VOCs), high explosives (HE), gamma emitting isotopes, gross alpha and beta, radium, and isotopic uranium. All samples were filtered in the field prior to sample collection using an in-line filter of 0.45-micron pore size, except those for VOCs, HE, and mercury fractions.

An elevated concentration of beryllium, exceeding the U.S. Environmental Protection Agency (EPA) Maximum Contaminant Level (MCL) of 0.004 mg/L was detected in the sample collected from Coyote Springs. Fluoride was also detected at or above the New Mexico Water Quality Control Commission (NMWQCC) Human Health Standard of 1.6 mg/L from samples collected at Coyote Springs, OBS-MW1, SFR-4T environmental and duplicate environmental samples, SWTA3-MW4, and TRE-1. All other sample results were detected below applicable state and federal standards.

## **Data Assessment**

All groundwater samples were collected and analyzed in accordance with U.S EPA-specified protocols. Data results are compared to applicable Maximum Contaminant Levels (MCLs) established by the U.S. EPA National Primary Drinking Water Regulations (40 CFR 141), National Primary Drinking Water Standards, EPA, July 2002 and Maximum Allowable Concentrations (MACs) established by the New Mexico Water Quality Control Commission (NMWQCC), Standards for Groundwater (20.6.2.3103A) Human Health Standards.

## **Results**

Analytical results for TAL metals are presented in Table-1. Samples were analyzed for dissolved (filtered) metals plus uranium. No metal parameters, other than beryllium, were detected above established regulatory limits in any groundwater samples. Beryllium was detected above the MCL of 0.004

milligrams per liter (mg/L) in the sample collected from Coyote Springs at a concentration of 0.0069 mg/L.

Mercury results are summarized in Table-2. Mercury was analyzed using unfiltered samples and is reported as total mercury. Mercury was not detected above the associated laboratory method detection limits (MDLs) from any groundwater sample.

Analytical results for alkalinity, anions (bromide, chloride, fluoride and sulfate) and total cyanide are presented in Table-3. No analytes were detected at or above established MACs or MCLs, except for fluoride. Fluoride was detected at or above the MAC of 1.6 mg/L in samples collected from Coyote Springs and GMP monitoring wells OBS-MW1, SFR-4T environmental and duplicate environmental samples, SWTA3-MW4, and TRE-1 at concentrations of 1.7 mg/L, 2.1 mg/L, 2.7 mg/L, 2.8 mg/L, 1.6 mg/L and 1.6 mg/L, respectively. Total cyanide detected above the MDL ranged from 0.0011 mg/L at SFR-4T duplicate to 0.0082 mg/L at CTF-MW1.

Table-4 summarizes nitrate-nitrite as nitrogen results. Nitrate was detected in water samples above associated MDLs and ranged from 0.22 mg/L at SFR-4T to 7.5 mg/L at CTF-MW1.

There was no high explosives (HE) compounds detected above the laboratory MDLs. The MDLs for HE are listed in Table-5. Analysis for HE was only conducted on groundwater samples collected from CCBA-MW2, CTF-MW1, SFR-2S, SFR-4T, SWTA3-MW2, SWTA3-MW3, SWTA3-MW4, and TRE-1. These wells are located in or downgradient of the Coyote Canyon Test Field and Coyote Canyon Blast Area and are associated with the Dynamic Explosives Test Site.

Volatile organic compounds detected above the laboratory MDLs are listed in Table-6. No VOCs were detected at concentrations above established MCLs or MACs from any groundwater sample. Acetone, chloroform and trichloro-1,2,2-trifluoroethane [1,1,2-] were the only compounds detected above their MDLs. Acetone was detected at SFR-4T at a concentration of 3.5 micrograms per liter ( $\mu\text{g}/\text{L}$ ) and chloroform was detected at TRE-1 at a concentration of 0.65  $\mu\text{g}/\text{L}$ . Trichloro-1,2,2-trifluoroethane [1,1,2-] was detected at CTF-MW1 at a concentration of 13  $\mu\text{g}/\text{L}$ . Table-7 lists the laboratory MDLs for the remaining VOC compounds.

Analytical results for radiological analyses are summarized in Table-8. Samples were analyzed for gross alpha, gross beta, gamma emitting isotopes, radium-226, radium-228, and isotopic uranium. Unadjusted gross alpha activity ranged from 1.9 picocuries per liter (pCi/L) at CYN-MW5 to 30.0 pCi/L at TRE-1. The EPA MCL for gross alpha activity of 15 pCi/L is based on a corrected gross alpha value, which excludes both total uranium and radon from initial gross alpha

count. Subsequently, when the total uranium activity is subtracted from the gross alpha value, the gross activity results from all samples are below the MCL. Gross alpha results in Table-8 are reported as uncorrected results. All other gamma emitters and radium isotopes were below established MACs and MCLs.

### **Conclusion**

During this annual sampling event, the DOE Oversight Bureau collected environmental samples from sixteen (16) LTS GMP monitoring wells that included: CCBA-MW2, CTF-MW1, CYN-MW5, GREYSTONE-MW2, MRN-2, MRN-3D, NWTA3-MW3D, OBS-MW1, PL-2, PL-4, SFR-2S, SFR-4T, SWTA3-MW2, SWTA3-MW3, SWTA3-MW4, and TRE-1. One (1) surface water sample was also collected from Coyote Springs. Beryllium was detected above the MCL of 0.004 mg/L in the sample collected from Coyote Springs at a concentration of 0.0069 mg/L. Beryllium concentrations observed during this event compare well to past data. Historically, beryllium concentrations at Coyote Springs have exceeded the EPA drinking water standard. Fluoride was detected above the MAC of 1.6 mg/L in samples collected from Coyote Springs and GMP monitoring wells OBS-MW1, SFR-4T, SWTA3-MW4, and TRE-1 at concentrations of 1.7 mg/L, 2.1 mg/L, 2.8 mg/L, 1.6 mg/L and 1.6 mg/L, respectively. Historically, fluoride has exceeded the MAC at these sites and results compare well to past concentrations. All other sample results were detected below associated MACs and MCLs.

The DOE-OB will continue to collect and monitor groundwater quality at these LTS GMP monitoring wells, including Coyote Springs. The analytical data for all past groundwater monitoring conducted by the DOE OB is available on the New Mexico Environment Department website at <https://www.env.nm.gov/doeob/>.

## **Footnotes for LTS Groundwater Monitoring Program Analytical Results Tables**

Sandia National Laboratories/New Mexico

New Mexico Environment Department DOE Oversight Bureau

March 2019

EPA	= U.S. Environmental Protection Agency.
HMX	= Octahydro-1,3,5,7-tetranitro-1,3,5,7-tetrazocine.
µg/L	= Micrograms per liter.
mg/L	= Milligrams per liter.
mrem/yr	= Millirem per year.
pCi/L	= Picocuries per liter.
RDX	= Hexahydro-1,3,5-trinitro-1,3,5-triazine.
Tetryl	= Methyl-2,4,6-trinitrophenylnitramine.

### **<sup>a</sup>Result or Activity**

Result applies to Tables-1 through -7. Activity applies to Table-8.

Activity = A negative value indicates that the sample count rate was below that of the instrument background; result is below the Minimum Detectable Activity (MDA).

**Bold** = Value exceeds the established MCL or MAC.

### **<sup>b</sup>Reporting Limit (RL)**

The RL applies to Tables-1 through -7.

RL = The reporting limit is the lowest that can be reliably measured by a laboratory with defined limits of precision and accuracy.

### **<sup>c</sup>MDL or MDA**

The MDL applies to Tables-1 through -7. MDA applies to Table-8.

MDA = The minimal detectable activity is used for radiochemical procedures and is defined as the concentration at which there is a 95% confidence that an analyte signal will be distinguishable from an analyte-free sample.

MDL = Method detection limit. The minimum concentration of an analyte that can be measured and reported with 99% confidence that the analyte is greater than zero.

### **<sup>d</sup>MCL and MAC**

Regulatory limits: The MCL is listed first, followed by the MAC. A single value is listed when the MCL and MAC are equal (for example, total mercury). If no value exists, NE is used.

MAC = Maximum allowable concentration. MACs were established by the New Mexico Water Quality Control Commission (NMWQCC September 2004).

MCL = Maximum contaminant level. MCLs were established by the EPA Office of Water, National Primary Water Standards (EPA May 2009).

The following are the MCLs for gross alpha particles and beta particles in community water systems:

- 15 pCi/L = Gross alpha particle activity, excluding total uranium (40 CFR Part 141).
- 4 mrem/yr = any combination of beta and/or gamma emitting radionuclides (as dose rate).

NE = Not established

## **Footnotes for LTS Groundwater Monitoring Program Analytical Results Tables (Concluded)**

Sandia National Laboratories/New Mexico

New Mexico Environment Department DOE Oversight Bureau

March 2019

### **eLaboratory Qualifier**

Lab qualifier applies to Tables-1 through -7.

J = the reported value was obtained from a reading that was less than the Reporting Limit but greater than or equal to the Method Detection Limit (MDL).

U = the analyte was analyzed for, but not detected.

Lab qualifier applies to Table-8

M = the requested MDA not met.

M3 = The requested MDA was not met, but the reported activity is greater than the reported MDA.

NQ = an NQ flag indicates that no peak was found, therefore the nuclide is not detected or supported at any level above the reported MDC.

U = result is less than the sample specific Minimum Detectable Activity (MDA).

Y1 = chemical yield is in control at 100-110%. Quantitative yield is assumed.

### **fAnalytical Method**
