Introduction

The New Mexico Environment Department (NMED) DOE Oversight Bureau (DOE-OB or Bureau) has compiled and assessed groundwater data collected during January-May 2017. The Bureau collected groundwater samples from Long-Term Stewardship (LTS) Consolidated Groundwater Monitoring Program (GMP) monitoring wells MRN-3D, NWTa3-MW3D, PL-2, PL-4, SFR-2S (plus duplicate), SFR-4T, SWTA3-MW2, SWTA3-MW3 and TRE-1. Samples were also collected from Coyote Spring located in Arroyo del Coyote. Split samples were collected using standard Sandia National Laboratories/New Mexico (SNL/NM) sampling procedures and equipment. The samples were submitted for analysis to an independent analytical laboratory for target analyte list (TAL) metals plus uranium, total mercury, anions, nitrate-nitrite as nitrogen, cyanide, volatile organic compounds (VOCs), high explosives (HE), gamma emitting isotopes, gross alpha and beta, radium, and isotopic uranium. All samples were filtered in the field using in-line filters of 0.45-micron pore size, except those for VOCs, HE, and mercury fractions. An elevated concentration of beryllium, exceeding the U.S. Environmental Protection Agency (EPA) drinking water standard was observed in the sample collected from Coyote Springs. All other sample results were detected below EPA standards.

Data Assessment

All groundwater samples were collected and analyzed in accordance with U.S EPA-specified protocols. Data results are compared to applicable Maximum Contaminant Levels (MCLs) established by the U.S. EPA National Primary Drinking Water Regulations (40 CFR 141), National Primary Drinking Water Standards, EPA, July 2002.

Results

Analytical results for TAL metals are presented in Table-1. Samples were analyzed for dissolved (filtered) metals plus uranium. No metal parameters were detected above established regulatory standards, except for beryllium. Beryllium was detected above the EPA MCL of 0.004 milligrams per liter (mg/L) from the sample collected at Coyote Springs at a concentration of 0.0071 mg/L.

Mercury results are summarized in Table-2. Mercury was analyzed using unfiltered samples and is reported as total mercury. Mercury was not detected above associated laboratory method detection limits (MDLs).

Analytical results for anions (bromide, chloride, fluoride and sulfate), nitrate-nitrite as nitrogen and total cyanide are presented in Table-3. No analytes were detected above established MCLs. Nitrate was detected in water samples above associated MDLs and ranged from 0.21 mg/L at SFR-4T to 5.1 mg/L at PL-4.

Total cyanide was not detected in all but one sample, SWTA3-MW3, at a concentration of 0.016 mg/L, and below the EPA MCL of 200 mg/L.

Volatile organic compounds detected above the laboratory MDLs are listed in Table-4. Chloroform and toluene were the only compound detected above the laboratory MDLs. Chloroform was detected at TRE-1 at a concentration of 0.55 microgram per liter ($\mu\text{g}/\text{L}$) and toluene was detected in the sample collected from SWTA3-MW3 at a concentration of 0.34 $\mu\text{g}/\text{L}$. Both results were below the laboratory detection limit and established EPA drinking water standards. Table-5 lists the laboratory MDLs for the remaining VOC compounds.

No HE compounds were detected above laboratory MDLs. The laboratory MDLs for HE compounds are listed in Table-6. Analysis for HE compounds was only conducted on groundwater samples collected from monitoring wells SFR-2S, SFR-4T, SWTA3-MW2, SWTA3-MW3 and TRE-1.

Analytical results for radiological analyses are summarized in Table-7. Samples were analyzed for gross alpha and beta, gamma emitting isotopes, radium-226, radium-228, and isotopic uranium. Unadjusted gross alpha activity ranged from 2 picocuries per liter (pCi/L) at SWTA3-MW3 to 22 pCi/L at TRE-1. The EPA MCL for gross alpha activity of 15 pCi/L is based on a corrected gross alpha value, which excludes both total uranium and radon from initial gross alpha count. Subsequently, when the total uranium activity is subtracted from the gross alpha value, the gross activity results from all samples are below the MCL. Gross alpha results in Table-7 are reported as uncorrected results. All other gamma emitters and radium isotopes were below established MCLs.

Conclusion

During this annual sampling event for LTS-GMP, environmental samples were collected from nine (9) groundwater monitoring wells MRN-3D, NWTA3-MW3D, PL-2, PL-4, SFR-2S, SFR-4T, SWTA3-MW2, SWTA3-MW3 and TRE-1. One (1) surface water sample was also collected from Coyote Spring. Beryllium was detected above the MCL of 0.004 mg/L in the sample collected from Coyote Spring at a concentration of 0.0071 mg/L. Beryllium concentrations observed during this event compare well to past data. Historically, beryllium concentrations at Coyote Spring have exceeded the EPA drinking water standard. All other sample results were detected below associated MCLs.

The DOE-OB will continue to collect and monitor groundwater quality at these LTS GMP monitoring wells, including Coyote Spring, and provide data results to DOE.
