**Groundwater Monitoring at Sandia National Laboratories/New Mexico Solid Waste Management Unit 68 Old Burn Site Conducted by NMED DOE OB for FFY 2012 Q-1**

The New Mexico Environment Department (NMED) DOE Oversight Bureau (Bureau) has compiled and assessed groundwater data collected during October 2011. The Bureau collected groundwater samples from Old Burn Site (OBS) monitoring wells OBS-MW1, OBS-MW2 and OBS-MW3, located within Solid Waste Management Units (SWMU) 68 at Sandia National Laboratories/New Mexico (SNL/NM).

Split samples were collected using standard SNL/NM sampling procedures and equipment. Groundwater samples were analyzed for Target Analyte List (TAL) metals plus uranium, major cations, major anions, nitrate, nitrite, perchlorate, total cyanide, high explosive (HE) compounds, volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), gross alpha and beta activity, radionuclides by gamma spectroscopy, and isotopic uranium. No constituents were detected above established U.S. Environmental Protection Agency (EPA) drinking water standards.

Data Assessment

All groundwater samples were collected and analyzed in accordance with U.S. EPA protocols. Data results are compared to applicable MCLs from the EPA National Primary Drinking Water Regulations (40 CFR 141).

Currently there is no U.S. EPA National Primary Drinking Water MCL or State of New Mexico drinking water standard for perchlorate. However, perchlorate results are compared to the *Compliance Order on Consent (COOC) Pursuant to the New Mexico Hazardous Waste Act 74-4-10: Sandia National Laboratories Consent Order*, New Mexico Environment Department, April 19, 2004. The COOC screening level for perchlorate is 4 micrograms per liter ( $\mu\text{g/L}$ ).

Results

Analytical results for total target analyte list (TAL) metals plus uranium are listed in Table-1. All metal concentrations were below established MCLs.

Analytical results for dissolved (filtered) major cations (as calcium, lithium, magnesium, potassium, silicon, sodium, and strontium) are summarized in Table-2. No MCLs are established for these analytes.

Analytical results for major anions (as bromide, chloride, fluoride, and sulfate), cyanide, nitrate, nitrite and perchlorate are presented in Table-3. No parameters were detected above established MCLs. Perchlorate was not detected above the laboratory method detection limit (MDL) in any of the SWMU 68 groundwater samples.

Analytical results for HE compounds are listed in Table-4. No HE compounds were detected above laboratory MDLs.

Analytical results for volatile organic compounds (VOCs) detected above the MDL are listed in Table-5. Acetone was detected above the MDL at monitoring wells OBS-MW1 (9.1 µg/L) and OBS-MW3 (11 µg/L). No MCL currently exists for acetone.

No semi-volatile organic compounds (SVOCs) were detected above their associated MDLs. Table-6 lists the laboratory MDLs for VOCs and SVOCs analyzed from Old Burn Site monitoring wells.

The results for gamma-emitting radionuclides, gross alpha and beta activity, and isotopic uranium are presented in Table-6. All radionuclide activity results were below MCLs, where established.

### Response

Questions or comments should be addressed to Chris Armijo by phone at (505) 383-2070, by e-mail at [chris.armijo1@state.nm.us](mailto:chris.armijo1@state.nm.us), or to the address in the letterhead.
