Subject: Data Submittal for Groundwater Monitoring at Sandia National Laboratories/New Mexico Solid Waste Management Units 8/58 Conducted by NMED DOE OB for FFY 2012 Q-1

Ms. Agogino:

This letter transmits the subject report as final. The report shows groundwater data results from Solid Waste Management Units (SWMUs) 8/58 monitoring wells collected by the New Mexico Environment Department DOE Oversight Bureau during the first quarter of FFY 2012.

The enclosed monitoring results were provided to the U.S Department of Energy in draft form on July 13, 2012 for 30-day review and comment. The final monitoring results are provided to DOE, the State of New Mexico and federal agencies, the NMED website and interested members of the public. If you have any questions, or if you would like copies of the complete data set, please contact me by phone at (505) 383-2070, by email at chris.armijo1@state.nm.us, or by mail to the address in the above letterhead.

Sincerely,

Groundwater Monitoring at Sandia National Laboratories/New Mexico Solid Waste Management Units 8/58 Conducted by the NMED DOE OB for FFY 2012 Q-1

The New Mexico Environment Department (NMED) DOE Oversight Bureau (Bureau) has compiled and assessed groundwater data collected during October and November 2011. The Bureau collected groundwater samples from Coyote Canyon Blast Area (CCBA) monitoring wells CCBA-MW1 and CCBA-MW2, located within Solid Waste Management Units (SWMUs) 8/58 at Sandia National Laboratories/New Mexico (SNL/NM). Monitoring wells CCBA-MW1 and CCBA-MW2 were installed at SWMUs 8/58 in August 2011. This is the first quarterly sampling event for the two monitoring wells.

Split samples were collected using standard SNL/NM sampling procedures and equipment. The groundwater samples from each well were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), high explosive (HE) compounds, nitrate, nitrite, major anions, major cations, Target Analyte List (TAL) metals plus uranium, perchlorate, total cyanide, gross alpha and beta activity, radionuclides by gamma spectroscopy, and isotopic uranium. No constituents were detected above established U.S. Environmental Protection Agency (EPA) drinking water standards, except for fluoride. Fluoride exceeds the established Maximum Contaminant Level (MCL) of 4.0 milligrams per liter (mg/L) in the CCBA-MW1 sample at a concentration of 5.0 mg/L.

Data Assessment

All groundwater samples were collected and analyzed in accordance with U.S. EPA protocols. Data results are compared to applicable MCLs from the EPA National Primary Drinking Water Regulations (40 CFR 141).

Currently there is no U.S. EPA National Primary Drinking Water MCL or State of New Mexico drinking water standard for perchlorate. However, perchlorate results are compared to the *Compliance Order on Consent (COOC) Pursuant to the New Mexico Hazardous Waste Act 74-4-10: Sandia National Laboratories Consent Order*, New Mexico Environment Department, April 19, 2004. The COOC screening level for perchlorate is 4 micrograms per liter ($\mu\text{g}/\text{L}$).

Results

Analytical results for total target analyte list (TAL) metals plus uranium are listed in Table-1. All metal concentrations were below established MCLs.

Analytical results for major anions (as bromide, chloride, fluoride, and sulfate), cations (as calcium, lithium, magnesium, potassium, silicon, sodium, and strontium), cyanide, nitrate, nitrite and perchlorate are presented in Table-2. Fluoride was detected above the EPA MCL of 4 mg/L. The elevated fluoride concentration was detected in a sample from monitoring well CCBA-MW1 (5 mg/L). All other analytes were below established MCLs and all samples analyzed for perchlorate were non-detects.

Analytical results for HE compounds are listed in Table-3. No HE compounds were detected above the method detection limits (MDLs) in any groundwater samples.

No VOCs or SVOCs were detected above laboratory MDLs in any groundwater samples collected from SWMUs 8/58. Table-4 lists the MDLs for associated VOCs and SVOCs.

The results for gamma-emitting radionuclides, gross alpha and beta activity, and isotopic uranium are presented in Table-5. All radionuclide activity results are below MCLs, where established.

Response

Questions or comments should be addressed to Chris Armijo by phone at (505) 383-2070, by e-mail at chris.armijo1@state.nm.us, or to the address in the letterhead.
