**Groundwater Monitoring at Sandia National Laboratories/New Mexico Technical Area-V
Conducted by NMED DOE OB for FFY 2012 Q-4**

The New Mexico Environment Department (NMED) DOE Oversight Bureau (Bureau) has compiled and assessed groundwater data collected during July and August 2012. The Bureau collected groundwater samples from Technical Area-V (TAV) groundwater monitoring wells AVN-1, LWDS-MW2, TAV-MW6, TAV-MW10, TAV-MW12, and TAV-MW13. Split samples were collected using standard Sandia National Laboratories/New Mexico (SNL/NM) sampling procedures and equipment. Bureau samples were submitted to an independent analytical laboratory where they were analyzed for metals, inorganics, organics and radiochemistry. Nitrate-nitrite was detected above the EPA MCL of 10 mg/L at monitoring well TAV-MW10. Trichloroethylene (TCE) was also detected above the EPA MCL of 5 µg/L at monitoring wells TAV-MW6, TAV-MW10 and TAV-MW12.

Data Assessment

Data results are compared to applicable Maximum Contaminant Levels (MCLs) established by the U.S. Environmental Protection Agency (EPA) National Primary Drinking Water Regulations (40 CFR 141), National Primary Drinking Water Standards, EPA, July 2002.

Results

Analytical results for total (unfiltered) target analyte list (TAL) metals plus uranium and dissolved (filtered) TAL metals plus uranium are presented in Table-1 and Table-2, respectively. All metal concentrations were below established MCLs.

Analytical results for major anions (as bromide, chloride, fluoride, and sulfate) and nitrate-nitrite are presented in Table-3. No anions were detected above their associated EPA MCL. Nitrate-nitrite was detected above the EPA drinking water standard of 10 mg/L at monitoring well TAV-MW10 at a concentration of 11.6 mg/L.

Analytical results for volatile organic compounds (VOCs) detected above the method detection limits (MDLs) are presented in Table-4. Trichloroethylene (TCE) was detected above the EPA MCL of 5 µg/L at monitoring wells TAV-MW6 (16 µg/L), TAV-MW10 (16 µg/L) and TAV-MW12 (6.1 µg/L). All other VOCs detected above the laboratory MDLs were below established EPA MCLs. The laboratory MDLs for the remaining VOCs analyzed from TAV monitoring wells are presented in Table-5.

Analytical results for radiochemistry samples are listed in Table-6. Samples were analyzed for gross alpha, gross beta, gamma emitting isotopes and tritium. No isotopes were detected above EPA MCLs.

Response

Questions or comments should be addressed to Chris Armijo by phone at (505) 383-2070, by e-mail at chris.armijo1@state.nm.us, or to the address in the letterhead.
