Subject: Data Submittal for Groundwater Monitoring at Sandia National Laboratories/New Mexico Technical Area-V Groundwater Area of Concern Conducted by the New Mexico Environment Department DOE Oversight Bureau for FFY 2018 Q-2

Mr. Black:

This letter transmits the subject report as final. The report shows groundwater data results from Sandia National Laboratories Technical Area-V Groundwater Area of Concern collected by the New Mexico Environment Department DOE Oversight Bureau during the second quarter of FFY 2018.

The enclosed monitoring results were provided to the U.S Department of Energy in draft form on July 20, 2018 for 30-day review and comment. The final monitoring results are provided to DOE, the State of New Mexico and other federal agencies, the NMED website and interested members of the public. If you have any questions, or if you would like copies of the complete data set, please contact me by phone at (505) 383-2070, by email at chris.armijo1@state.nm.us, or by mail to the address in the above letterhead.

Sincerely,

Chris Armijo
Environmental Scientist
Sandia Oversight Section

Final Report

8/20/2018

The purpose of this communication is to transmit groundwater quality data results collected by the New Mexico Environment Department DOE Oversight Bureau from Sandia National Laboratories Technical Area-V Groundwater Area of Concern during the second quarter of Federal Fiscal Year 2018.

Acknowledgment:

This material is based upon work supported by the Department of Energy Office of Environmental Management under Award Number *DE-EM0002420*.

Introduction

The New Mexico Environment Department (NMED) DOE Oversight Bureau (DOE-OB or Bureau) has compiled and assessed groundwater data collected during February 2018. The Bureau collected groundwater samples from Technical Area-V Groundwater (TAVG) Area of Concern (AOC) monitoring wells TAV-MW2, TAV-MW4, TAV-MW8, TAV-MW10 (plus duplicate), TAV-MW11, TAV-MW12, TAV-MW14, TAV-MW15 and TAV-MW16 (plus duplicate). Samples were collected using standard Sandia National Laboratories/New Mexico (SNL/NM) sampling procedures and equipment. Samples from TAV-MW15 and TAV-MW16 were analyzed for metals, anions, nitrate-nitrite as nitrogen (N), volatile organic compounds (VOCs) and radionuclides. Samples collected from the remaining TAVG monitoring wells were analyzed for dissolved metals, nitrate-nitrite as N and VOCs only. The Bureau submitted samples for analysis to an independent analytical laboratory under contract with the NMED.

Nitrate levels exceeded the U.S. Environmental Protection Agency (EPA) maximum contaminant level (MCL) or drinking water standard of 10 mg/L at monitoring well TAV-MW10. Trichloroethene (TCE) concentrations also exceeded the EPA MCL of 5 µg/L at monitoring wells TAV-MW10, TAV-MW12 and TAV-MW14.

Data Assessment

All groundwater samples were collected and analyzed in accordance with U.S. EPA protocols. Data results are compared to applicable MCLs established by the U.S. EPA National Primary Drinking Water Regulations (40 CFR 141), National Primary Drinking Water Standards, EPA, July 2002.

Results

Analytical results for total (unfiltered) target analyte list (TAL) metals plus uranium are presented in Table-1. No metal results exceed established MCLs.

Table-2 presents the analytical results for dissolved (filtered) metal results for arsenic, iron and manganese. No metal results exceed established MCLs.

Analytical results for anions (bromide, chloride, fluoride and sulfate) and nitrate-nitrite as N are summarized in Table-3. All anion results were below MCLs. Nitrate exceeded the EPA MCL of 10 mg/L at monitoring well TAV-MW10 (11 mg/L) and TAV-MW10 duplicate (11 mg/L). All other nitrate results were detected below the EPA MCL.

Table-4 presents a summary of detected VOCs at concentrations above the method detection limits (MDLs). Compounds detected at concentrations above the MDLs in groundwater samples from TAVG monitoring wells include acetone,

chloroform, chloromethane, dichloroethene [cis-, 2-] and TCE. No VOCs were detected above their associated MCL, except for TCE. TCE was detected above the EPA MCL of 5 µg/L at TAVG monitoring wells TAV-MW10 (9.6 µg/L), TAV-MW10 duplicate (10 µg/L), TAV-MW12 (7.1 µg/L) and TAV-MW14 (5.7 µg/L). Table-5 summarizes the laboratory MDLs for the remaining VOCs analyzed from samples collected at TAVG.

Analytical results for radionuclides are presented in Table-6 and used to screen for potential radiological contamination. Samples were analyzed for gross alpha, gross beta, gamma emitting isotopes and tritium. No radionuclides results exceed established MCLs.

Conclusion

The DOE-OB collected split samples from a total of nine (9) TAVG monitoring wells during the second quarter of FFY 2018. Samples were analyzed by an independent analytical laboratory under contract with the NMED. Samples were analyzed for metals, anions, nitrates, VOCs and radionuclides. Nitrate results exceeded the EPA MCL of 10 mg/L from a sample collected from monitoring well TAV-MW10. TCE concentrations also exceeded the EPA MCL of 5 µg/L at monitoring wells TAV-MW10, TAV-MW12 and TAV-MW14.

Both nitrate and TCE have been identified as contaminants of concern at TAV. Historically, nitrate and TCE have been detected above the EPA drinking water standards in several wells and the Bureau's results for this reporting period are consistent with historical concentrations results.

The DOE-OB will continue to independently monitor for contaminants of concern at TAVG AOC and make the data reports available to the public.
