Final Report

8/16/2017

The purpose of this communication is to transmit groundwater quality data collected by New Mexico Environment Department DOE Oversight Bureau from Technical Area-V Groundwater Area of Concern during the third quarter of Federal Fiscal Year 2017.

Introduction

The New Mexico Environment Department (NMED) DOE Oversight Bureau (DOE-OB or Bureau) has compiled and assessed groundwater data collected during May and June 2017. The Bureau collected groundwater samples from Technical Area-V (TAV) Groundwater Area of Concern (AOC) monitoring wells AVN-1, LWDS-MW2, TAV-MW2 (plus duplicate), TAV-MW3, TAV-MW4, TAV-MW5, TAV-MW7, TAV-MW9, TAV-MW11 and TAV-MW13. Split samples were collected using standard Sandia National Laboratories/New Mexico (SNL/NM) sampling procedures and equipment. Samples were analyzed for inorganics, organics and radionuclides. The Bureau used Test America Laboratories located in West Sacramento, California to analyze samples for nitrate-nitrite. All other analyses were conducted by ALS Environmental Laboratory located in Fort Collins, Colorado. Test America and ALS Environmental are both independent analytical laboratories under contract with the NMED.

No sample concentrations exceeded established U.S. Environmental Protection Agency (EPA) Maximum Contaminant Levels (MCLs).

Data Assessment

All groundwater samples were collected and analyzed in accordance with U.S. EPA protocols. Data results are compared to applicable MCLs established by the U.S. EPA National Primary Drinking Water Regulations (40 CFR 141), National Primary Drinking Water Standards, EPA, July 2002.

Results

Analytical results for total (unfiltered) target analyte list (TAL) metals plus uranium are presented in Table-1. All metal concentrations were below established MCLs.

Analytical results for anions (bromide, chloride, fluoride and sulfate) and nitrate-nitrite as nitrogen are summarized in Table-2. All anions and nitrate-nitrite results were below EPA drinking water standards

Volatile organic compounds (VOCs) detected at concentrations above the method detection limits (MDLs) are listed in Table-3. Compounds detected above the laboratory MDLs include dichloroethene [cis-, 2-], chloroform and trichloroethene (TCE). No VOCs were detected above their associated MCL. Table-4 summarizes the laboratory MDLs for the remaining VOCs analyzed from samples collected at TAV.

Analytical results for radionuclides are presented in Table-5 and used to screen for potential radiological contamination. Samples were analyzed for gross

alpha, gross beta, gamma emitting isotopes and tritium. All radionuclide results were below established EPA MCLs.

Conclusion

The DOE-OB collected split samples from a total of ten (10) TAV groundwater monitoring wells during the third quarter of FFY 2017. Samples collected by the Bureau were analyzed by Test America and ALS Environmental. Data results were reported at concentrations below established EPA drinking water standards.

The DOE-OB will continue to monitor groundwater quality at SNL/NM TAVG AOC and make the data available to the public.
