Final Report

8/5/2015

The purpose of this communication is to transmit groundwater data collected by the New Mexico Environment Department DOE Oversight Bureau from Technical Area-V groundwater monitoring wells during the second quarter of FFY 2013.

This material is based upon work supported by the Department of Energy Office of Environmental Management under Award Number *DE-EM0002420*.

This report was prepared as an account of work sponsored by an agency of the United States Government. Neither the United States Government nor any agency thereof, nor any of their employees, makes any warranty, express or implied, or assumes any legal liability or responsibility for the accuracy, completeness, or usefulness of any information, apparatus, product, or process disclosed, or represents that its use would not infringe privately owned rights. Reference herein to any specific commercial product, process, or service by trade name, trademark, manufacturer, or otherwise does not necessarily constitute or imply its endorsement, recommendation, or favoring by the United States Government or any agency thereof. The views and opinions of authors expressed herein do not necessarily state or reflect those of the United States Government or any agency thereof.

Introduction

The New Mexico Environment Department (NMED) DOE Oversight Bureau (Bureau) has compiled and assessed groundwater data collected during February and March 2013. The Bureau collected groundwater samples from Technical Area-V (TAV) groundwater monitoring wells AVN-1, LWDS-MW1, LWDS-MW2, TAV-MW2, TAV-MW6, TAV-MW8, TAV-MW11, and TAV-MW13. Split samples were collected using standard Sandia National Laboratories/New Mexico (SNL/NM) sampling procedures and equipment. Bureau samples were submitted to an independent analytical laboratory where they were analyzed for total target analyte list (TAL) metals plus uranium, nitrate-nitrite, and volatile organic compounds (VOCs). Nitrate-nitrite exceeded the U.S. Environmental Protection Agency (EPA) maximum contaminant level (MCL) at monitoring well LWDS-MW1. Trichloroethylene (TCE) also exceeded the EPA MCL at monitoring wells LWDS-MW1 and TAV-MW6.

Data Assessment

All groundwater samples were collected and analyzed in accordance with U.S. EPA protocols. Data results are compared to applicable MCLs established by the EPA National Primary Drinking Water Regulations (40 CFR 141), National Primary Drinking Water Standards, EPA, July 2002.

Results

Analytical results for total TAL metals are listed in Table 1. All metal concentrations were below established MCLs.

Analytical results for nitrate-nitrite are listed in Table 2. Nitrate-nitrite concentration at LWDS-MW1 exceeded the MCL of 10 mg/L at a concentration of 11 mg/L. All other values were below the MCL.

Analytical results for VOCs detected above the method detection limit (MDL) are listed in Table 3. TCE concentrations detected at monitoring wells LWDS-MW1 and TAV-MW6 exceeded the EPA MCL of 5 µg/L. Concentrations were 17 µg/L and 9.8 µg/L, respectively. All other values were below established MCLs. Table 4 lists the laboratory method detection limits for the remaining VOCs.

^ = ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC exceeds the control limits.

B = Compound was found in the blank and sample.

D = Dilution

J = Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

NE = Not Established

U = Analyte not detected at or above the reporting limit or MDL
