Assessment Information:**Assessment Unit Comments:**

This reservoir has a headgate on one end of the dam that is the beginning of Nacimiento Creek (Rio Puerco Watershed). The dam also has a spillway that empties into Clear Creek, which is in the Jemez watershed. The water level currently (June 2004) does not reach this spillway. Clear Creek below the reservoir is fed by ground water in a series of bogs a couple of miles below the lake and is running, but there appears to be no surface water connection. Therefore, this lake was sampled as part of the 2004 Rio Puerco study.

Probable Causes of Impairment:

TMDL Schedule:

Fecal Coliform	2007
----------------	------

Probable Sources of Impairment:

- Impervious Surface/Parking Lot Runoff
- Municipal (Urbanized High Density Area)
- Municipal Point Source Discharges
- On-site Treatment Systems (Septic Systems and Similar Decentralized Systems)
- Permitted Runoff from Confined Animal Feeding Operations (CAFOs)
- Rangeland Grazing
- Wastes from Pets
- Waterfowl
- Wildlife Other than Waterfowl

Assessment Unit Comments:

The International Boundary and Water Commission (IBWC) submitted data for consideration during the development of the 2004-2006 list. The single sample fecal coliform criterion of 400 cfu/100mL was exceeded 144 of 272 (53%) times at station IBWC 13272 (Rio Grande 1.7 miles upstream of American Dam near El Paso, TX) and 0 of 29 (0%) times at station IBWC 13276 (Rio Grande upstream of East Drain near Anthony, NM). This difference in exceedence rates at stations within the current assessment unit indicates that it may be appropriate to split the assessment unit at some point between Anthony and El Paso. SWQB is in the process (2004) of conducting an intensive water quality survey of the Lower Rio Grande from Elephant Butte to the Texas border. The results of this study, along with IBWC data and data collected by other entities that meets QA requirements, will be used to refine this assessment unit into two or more assessment units as appropriate for the 2006-2008 listing cycle.

Probable Sources of Impairment:

Highway/Road/Bridge Runoff (Non-construction Related)
 Loss of Riparian Habitat
 Rangeland Grazing
 Streambank Modifications/destablization
 Watershed Runoff following Forest Fire

Assessment Unit Comments:

Need bio and geomorph data to assess SBD listing.

Fecal Coliform	2005
Sediment Bioassays -- Chronic Toxicity Freshwater	2005

Probable Sources of Impairment:

Flow Alterations from Water Diversions
Municipal Point Source Discharges
On-site Treatment Systems (Septic Systems and Similar Decentralized Systems)
Source Unknown

Assessment Unit Comments:

There was a major problem with the WWTP in this stream reach during the 2001 study due to improper installation of the chlorination/de-chlorination system that has since been corrected. Additional data is necessary to determine if repairs have corrected impairments noted during the 2001 survey.

Probable Sources of Impairment:

Municipal Point Source Discharges

Assessment Unit Comments:

Results from the station immediately below the Glorieta Conference Center WWTP led to the above impairment listings. Flow at this station is 100% effluent dominated, therefore HQCWF is likely not an existing or attainable use in this entire AU.

Turbidity

2004

Probable Sources of Impairment:

Aquaculture (Permitted)
Highway/Road/Bridge Runoff (Non-construction Related)
Natural Sources
Other Recreational Pollution Sources
Reclamation of Inactive Mining

Assessment Unit Comments:

Turbidity exceedences during 2001 survey only occurred in the spring and were likely due to snowmelt runoff (ie, natural causes). Lisboa Fish Hatchery was closed from 1999- Feb 2003. The hatchery currently (2004) discharges from a settling pond into this reach of the Pecos River. Additional data is needed.

Probable Sources of Impairment:

Habitat Modification - other than Hydromodification
Highway/Road/Bridge Runoff (Non-construction Related)
Mine Tailings
Source Unknown
Streambank Modifications/destablization

Assessment Unit Comments:

Additional data is needed to determine SBD/sedimentation impairment. This AU should be split at upper project limit. SWQB will meet with the Groundwater Quality Bureau to determine the status of the reclamation and to determine whether proposed reclamation efforts are stringent enough to meet existing water quality standards. The data is not currently available to determine the effects of the reclamation efforts on all impaired surface water quality parameters.

Assessment Information:**Assessment Unit Comments:**

This reservoir was constructed to contain water supply for the town of Ruidoso. When there is adequate flow in the Rio Ruidoso to protect instream uses, flow is diverted from the Rio Ruidoso into this reservoir. This reservoir also captures runoff from Grindstone Canyon. This reservoir should be reclassified into its own WQS segment because fish culture and HQCWF are not existing uses.
